NOTE

Section 119 of The Loan and Trust Corporations Act (R.S.O. 1927, Chapter 223) provides as follows:—

> 119.—(1) No corporation shall, under the penalty of becoming disentitled to registry or of having its registry suspended or cancelled, make, print, publish, circulate, authorize, or be a party or privy to the making, printing, publishing, or circulating of any statement or representation that its solvency or financial standing is vouched for by the Registrar or that the publication of its statement in his report is a warranty or representation of the solvency of the corporation, or of the truth or accuracy of such statement in any particular.

ONTARIO

DEPARTMENT OF INSURANCE

To The Honourable W. H. Price, K.C., M.P.P.,
Minister in Charge of the Department.

Sir,—

I have the honour to submit herewith the Thirty-fourth Annual Report of the Registrar of Loan Corporations for the year 1931 (business for the year ended 31st December, 1930).

The statements included in this report are arranged alphabetically according to the classes of corporations defined by the Act, namely, Loan Corporations, Loaning Land Corporations and Trust Companies. In addition there are certain statistical tables, tabulated summaries and comparative statements more fully described in the Table of Contents.

The preliminary text submitted with the abstract of this report under date of May 30th, 1931, outlining registry changes during the year and important features of 1930 business is included herewith beginning on page v.

Additional Registry Changes

Since the publication of the Abstract, I have the following registry changes to report,—

By Order-in-Council dated 20th May, 1931, the Lieutenant-Governor in Council formally approved the Guaranty Trust Company of Canada as a Trust Company with which trustees may entrust trust funds for guaranteed investment.

By Order-in-Council dated 22nd December, 1931, the British Mortgage and Trust Company was formally approved by the Honourable the Administrator of the Government of the Province of Ontario, as a trust company with which trustees may entrust trust funds for guaranteed investment.

All of which is respectfully submitted.

R. Leighton Foster,
Registrar of Loan Corporations.

Parliament Buildings,
December 31st, 1931.

PRELIMINARY TEXT SUBMITTING ABSTRACT REPORT, MAY, 1931

To The Honourable William H. Price, K.C., M.P.P.,
Minister in Charge of the Department.

Sir,—

I have the honour to submit herewith an abstract of the Thirty-fourth Annual Report of the Registrar of Loan Corporations of Ontario upon the affairs of all registered loan corporations, loaning land corporations and trust companies doing business in Ontario for the year 1931 (business of 1930).

This report shows in tabulated summaries the financial condition of these corporations as taken from their annual statements filed with the Department on or before the last day of February, 1931, in respect to their business for the preceding calendar year, subject in some cases to certain adjustments and corrections necessary to secure uniformity and comply with the provisions of the Act. It is to be distinctly understood, however, that subsequent to the annual inspection now proceeding the statements herein contained are subject to such further changes or modifications, as may, in the opinion of the Registrar, be necessary to show the true and correct financial condition of each corporation. The Department does not assume responsibility for the correctness of the figures submitted or for the valuation of the securities which compose the assets of the corporations.

The report is arranged alphabetically according to the class of corporation defined by the Act, namely, loan corporations, including loaning land corporations and trust companies.

REGISTRY CHANGES

I have the following registry changes to report:

By Order-in-Council dated 12th March, 1930, the Lieutenant-Governor in Council approved By-law No. 37 of the Ontario Loan and Debenture Company, being a by-law to convert 20,000 shares each 20 per cent. ($10) paid, into 4,000 fully paid shares.

An agreement for the sale of the assets of the People's Loan and Savings Corporation, London, Ontario, to the Huron and Erie Mortgage Corporation, London, Ontario, bearing date November 18th, 1930, and duly ratified by the shareholders of the respective corporations December 29th and December 30th, 1930, was formally approved by the Lieutenant-Governor in Council on the 17th day of January to become effective as from January 2nd, 1931.

A by-law of the Toronto General Trusts Corporation increasing the authorized capital from $3,000,000 to $5,000,000 was approved by Order-in-Council dated February 17th, 1931.

The Ontario Mortgage Company, with head office in Toronto, ceased registry as a loan corporation and went into voluntary liquidation as at October 2nd, 1930. The company ceased operating August 31st, 1930, and its assets were subsequently sold.

REVIEW OF 1930 BUSINESS

Total assets of loan corporations reported show an increase of thirteen million dollars in 1930 over 1929, while trust company assets not including estates and agency funds, increased twenty-eight millions, the latter figure, however, being affected by the registry of the Northern Trust Company which brought in assets of four million dollars.

Reference to my reports of previous years reveals an almost unbroken record of increases in the assets of these corporations, the past three years showing an increase of fifty-eight million dollars in the combined funds. On January 1st, 1928, fifty-five corporations (thirty-one loan and twenty-four trust) showed total assets of $387,000,000 while on December 31st, 1930, fifty corporations (twenty-two loan and twenty-eight trust) showed $445,000,000 of assets. More than $42,000,000 of this increase represents an increase in clients' funds for investment, the balance being made up of an increase of $10,000,000 in money borrowed from banks, $8,000,000 from capital and reserves and the balance by several smaller increases in other accounts. Of the increase of $8,000,000 in the book value of Shareholders Worth—i.e., Capital, Reserve and Surplus, during the period—capital accounted for slightly over half and accumulated profits for the balance.

For several years there has been a steady increase in the number of trust companies registered and a decrease in loan corporations. This is significant of the marked trend toward trust companies which institutions have comparable powers to all those of loan corporations and in addition, other very valuable powers exclusively peculiar to themselves. While the decrease in loan corporations is partially due to amalgamations, there have been a number voluntarily cease business, and wind up their affairs, and several others have obtained special legislation reincorporating them into trust companies.

Almost all of the larger loan corporations remaining to-day have control of or are closely associated with a trust company, and even with these there is a growing opinion in favour of reorganizing the combined institutions into a single large trust company.

In the whole history of loan and trust company supervision in Ontario there is no record of an Ontario incorporated company having failed with a loss to the public or its creditors. The recognized conservative business policy of such institutions has enabled them to withstand many depressions and setbacks and has gained for them a most enviable reputation.

It should not be assumed, however, that loan and trust corporations have not suffered from the present depression. Not only have they experienced a serious contraction in the value of their investments however well diversified, but income from fees for agencies and managements has been materially reduced. In spite of the continued depression, however, there has been little or no depreciation recorded in the stocks of such companies and they have continued to carry on with practically no reduction in dividends to their shareholders. Nevertheless should the depression continue, I have no doubt that several of the more conservative institutions will consider it advisable to reduce their distributions to shareholders rather than weaken their structure by cutting too deeply into reserves.

The lending of money upon mortgages of real estate has always been one of the chief or should I say the chief class of investment for loan and trust corporations. While a very few corporations have invested the bulk of their funds in collateral loans the great majority have availed themselves of the special privilege of loaning on mortgages which, among corporations, is confined almost exclusively to loan, trust and insurance companies.

At the close of the year 1930, mortgage investments of all corporations totalled more than $275,000,000 or more than 60 per cent. of their total funds. Of this total, $179,000,000 is invested in eastern provinces while $96,000 000 is invested in the west. While mortgage investments in both the east and the west have increased steadily with the increase in funds available there has been a growing tendency toward greater increases in the east. The majority of the corporations registered are also confining their new loans to cities and selected districts where experience has been good and prospects appear favourable.

As an evidence of their faith in their institutions and the communities in which they have established their offices the increase in their investments in office premises is worthy of note. Of the fifty-five corporations registered in 1927, thirty-two had invested $6,890,000, while in 1930 three years later, there were thirty-two of fifty registered corporations with investments in this asset of $13,130,000.

While the investing of money in real estate for resale is not permitted to corporations, other than loaning land corporations, it frequently becomes necessary for them to take possession of property for the protection of their mortgage investments. It is not surprising, therefore, to note an increase in the funds tied up in such real estate during the past year of slightly under a million dollars. The whole of this increase is confined to trust companies, their real estate holdings rising to a book value of $2,160,000 from the 1929 figure of $1,163,000. Such real estate held by loan corporations during the past year remained at the book value of $687,000.

Collateral loans of all companies increased during 1930 from $42,000,000 to $60,000,000. At the end of 1930, twenty of the twenty-two registered loan corporations had outstanding $6,650,000, an increase of $2,180 000 while twenty-three of the twenty-eight trust companies had loans of $53,650,000 against $38,150,000 at the end of the previous year. Of the 1930 total outstanding a single trust company was responsible for $37,650,000, the major portion of which, $35,500,000, being guaranteed funds. This company has continuously confined its investment of guaranteed funds to collateral loans and was alone responsible for $10,000,000 of the above-mentioned increase.

Bond holdings account for nearly $2,000,000 of the increase in assets of all corporations, loan corporations holdings increasing by two and a half millions and those of trust companies decreasing by slightly less than a million. Trust companies' holdings in company funds increased by nearly $3,000,000 but those in guaranteed funds decreased by an amount just below four millions. This last-mentioned decrease, however, is more than accounted for by an increase in guaranteed funds cash of four millions.

During the year 1930 there was a marked reduction in the amounts held in Government bonds by trust companies while holdings in other classes all showed increases.

Stocks owned increased in both loan and trust corporations and both company and guaranteed funds of the latter. The total increase was one and a half million dollars.

Cash also shows increases for all classes, the total increase being six million dollars of which more than four millions is in trust companies' guaranteed funds.

As evidence of the continued and ever-growing faith in these corporations by the public, the amount held on deposit with them and invested in their debentures and guaranteed investment certificates has again increased. Deposits with loan corporations (sixteen of them) increased by two million dollars to $38,700,000, while those with trust companies show an increase of more than eleven millions, from $31,390,000 to $42,630,000. Loan corporations report debentures outstanding of $109,000,000, an increase in excess of nine million, and guaranteed investment certificates of trust companies showed an increase of eleven million to $104,500,000.

Investment reserves disclosed among liabilities in companies statements at $3,360,000 while showing an increase of more than 100 per cent. over the previous year cannot be taken as an indication of the reserves held. Reserves against probable or possible loss of assets are usually deducted from such assets in the preparation of financial statements and if summarized separately would amount to several million dollars. In addition to such items there are still further reserves held by way of understated accruals of profits while some trust companies have further additional amounts set aside in special funds. The item of "Other Liabilities" shown in summaries as more than $18,000,000 also includes substantial amounts held as reserves and deferred profits.

In my 1928 report I drew particular attention to the fact that in 1927 estates and trust and agency funds of trust companies had passed the billion mark. Year by year for more than twenty years trust companies had been gradually building up a reputation for efficiency and fair dealing in the administration of estates and trusts, but it was not until three years ago that the total of such funds under their care reached a billion dollars. To-day in the midst of world-wide depression these companies carry on the administration of $1,867,000,000 of estates and trusts funds, a growth of more than 800 millions in the last three years. The services for which a trust company can be used are so numerous and the convenience to clients so well recognized that I have no doubt that such funds will show continuously larger increases year by year for many years to come.

Income of loan corporations shows a decrease of a million dollars gross while trust companies show a gross increase of half that amount. Net income likewise was lower for loan corporations and greater for trust companies. A detailed analysis of revenues for the past three years is shown on pages 302 and 303.

Dividends paid have continuously increased since 1927 due chiefly to increased capital although the average rate shows a slight increase during the past two years (see p. 304). Dividend distributions in 1930 amounted to nearly seven million dollars, $4,475,000 by nineteen loan corporations and $2,500,000 by twenty-three trust companies.

NEW LEGISLATION

The Loan and Trust Corporations Act was amended by striking out the word "verify" in the fourth line of subsection 1 of section 148 and inserting in lieu thereof the words "inspect and examine." See 1931 Statutes, c. 23. s. 18.

Respectfully submitted,

R. Leighton Foster,
Registrar of Loan Corporations.

May 30th, 1931.

Interest	12,502 60

CONSTATING INSTRUMENTS

This company was incorporated under Special Act of the Dominion of Canada, 62-63 Victoria (1899), c. 10, under the name of "The Canada Permanent and Western Canada Mortgage Corporation," for the purpose of acquiring the assets and business of the Canada Permanent Loan and Savings Company, the Western Canada Loan and Savings Company, the Freehold Loan and Savings Company, and The London and Ontario Investment Company, Limited, which several purchases were confirmed by Special Act of Ontario, 63 Victoria, 1900, c. 129. The name was changed to the "Canada Permanent Mortgage Corporation" by 3 Edward VII (1903), c. 94 (D), which Act also amended its lending powers. By 3-4 George V (1913), c. 86 (D), further amendments were made to the Incorporating Act.

Of the constituent companies, the Canada Permanent Loan and Savings Company was incorporated by declaration filed under The Building Societies Act (Cons. Stat. U.C., c. 53) in 1855, under the name of the Canada Permanent Building and Savings Society, which name was changed to the Canada Permanent Loan and Savings Company by 37 Victoria (Ontario), 1874, c. 100.

The Western Canada Loan and Savings Company was also incorporated by declaration filed under The Building Societies Act in 1863, under the name of the Western Canada Permanent Building and Savings Society, and its name was changed to the Western Canada Loan and Savings Company by 37 Victoria (Ontario), 1874, c. 79.

The Freehold Loan and Savings Company was also incorporated by declaration filed under The Building Societies Act in 1859 under the name of The Freehold Permanent Building and Savings Society; the name being changed to The Freehold Loan and Savings Company by 36 Victoria (Ontario), (1873), c. 104.

The London and Ontario Investment Company was incorporated by the Act of Ontario, 39 Victoria, 1876, c. 62.

CANADA PERMANENT MORTGAGE CORPORATION—Continued

In 1918 the company purchased the assets and business of The Oxford Permanent Loan and Savings Society, which purchase was ratified by Order-in-Council of Ontario dated July 31st, 1918, pursuant to The Loan and Trust Corporations Act.

In 1921, the company also purchased the assets and business of The London and Canadian Loan and Agency Company, Limited, which purchase was ratified by Order-in-Council of Ontario, dated September 23rd, 1921, pursuant to The Loan and Trust Corporations Act.

In 1926 the company purchased the assets and business of The Royal Loan and Savings Company, which purchase was ratified by Order-in-Council of Ontario dated March 4th, 1927, pursuant to The Loan and Trust Corporations Act.

In 1927 the company purchased the assets and business of The British Columbia Permanent Loan Company, Vancouver, B.C.

In 1927 the company also purchased the assets and business of The Canada Landed and National Investment Company, Limited, which purchase was ratified by Order-in-Council of Ontario, dated December 30th, 1927, pursuant to The Loan and Trust Corporations Act.

CONSTATING INSTRUMENTS

1884—Letters Patent (under the Ontario Government Joint Stock Companies' Letters Patent Act), incorporating The Central Canada Loan and Savings Company of Ontario, with a capital of $2,000,000, in 20,000 shares of $100 each, dated 7th March, 1884.

1890—Act (of the Legislature of the Province of Ontario), 53 Vic., c. 129; declares capital to be $5,000,000, in 50,000 shares of $100 each; confirms the purchase of the assets of the Peterborough Real Estate Investment Company, Limited; authorizes the issue of debenture stock; authorizes agencies in the United Kingdom; defines the limit of borrowing powers.

1893—Supplementary Letters Patent (of the Province of Ontario), dated 8th June, 1893, extending the Company's purchasing and lending powers with regard to bonds, stocks and debentures to the Province of Manitoba.

1896—Act (of the Legislature of the Province of Manitoba), 59 Vic., c. 33, authorizes Company to exercise in the Province of Manitoba, with respect to real and personal property, all the rights, powers and privileges that it possesses in Ontario.

1897—Supplementary Letters Patent (of Ontario), dated 6th May, 1897, amending the original Letters Patent by expunging therefrom powers of Company to buy and sell land.

1898—Act (of the Parliament of the Dominion of Canada), 61 Vic., c. 97.

1899—Act (of the Legislature of the Province of Manitoba) authorizing Dominion Company to exercise in Manitoba all its rights, powers and privileges; defining the powers of the Company and vesting all the assets of the old company in the new company.

1900—Act (of the Legislature of the Province of Ontario), confirming and validating the conveyance and assignment of 1st December, 1898 (see form of the conveyance and assignment in schedule to 61 Vic., c. 97), and transferring and vesting the assets of the Provincial Company in the Dominion Company.

CONSTATING INSTRUMENTS

Incorporated under The Building Societies Act, 9 Vict., c. 90 (Province of Canada), by declaration filed on 27th March, 1847, with the Clerk of the Peace for the Western District. The original corporate name was "The Port Sarnia Building Society." The society was reorganized as "The Lambton Permanent Building and Investment Society" under the said Act and other Acts, all of which became consolidated as chapter 53 of the Consolidated Statutes of Upper Canada, by declaration filed 19th June, 1855, with the Clerk of the Peace for the County of Lambton. This latter corporate name was changed by Order-in-Council, 4th June, 1880, to The Lambton Loan and Investment Company.

The lending and the borrowing powers are governed by The Loan and Trust Corporations Act, R.S.O. 1927, c. 223.

CONSTATING INSTRUMENTS

Incorporated under the Building Societies Act, Consol. Stat. U.C. chap. 53, by declaration filed with the Clerk of the Peace for the United Counties of Northumberland and Durham, 5th July, 1872. (Decl. Book, II, 127).

The corporate name was, by Order-in-Council of Ontario, 21st June, 1876 (Ibid.), changed to the Midland Loan and Savings Company.

A by-law altering the amount of the capital stock and par value of the share was, pursuant to the Loan Corporations Act, approved by Order-in-Council of Ontario, 3rd October, 1900.

The borrowing and lending powers are governed by The Loan and Trust Corporations Act, R.S.O. 1927, chap. 223.

8. Amount of interest permanently capitalized during the year		1,204 16
9. Amount of Company's own debentures and interest thereon, due and unpaid		38,157 38

CONSTATING INSTRUMENTS

Incorporated under The Building Societies Act, Consolidated Statutes of Upper Canada, c. 53, by declaration filed in the office of the Clerk of the Peace for the County of Middlesex, 26th September, 1870. The original corporate name was The Ontario Savings and Investment Society.

By Order-in-Council of Ontario, dated 4th October, 1879, and also by Order-in-Council of Canada, dated 29th October, 1879, the corporate name was changed to The Ontario Loan and Debenture Company.

The Company as now constituted was formed under the provisions of The Loan Corporations Act of Ontario by The Ontario Loan and Debenture Company, taking in by amalgamation the Agricultural Savings and Loan Company under Order-in-Council, dated 10th November, 1911, and operates under The Loan and Trust Corporations Act, R.S.O. 1927, chapter 223.

By Order-in-Council of Ontario, dated 12th March, 1930, 20,000 shares twenty per cent. called and paid were converted into 4,000 shares fully paid, authorized capital thereby being reduced from 100,000 to 84,000 shares.

CONSTATING INSTRUMENTS

Incorporated under The Building Societies Act (R.S.O. 1877, c. 164), by declaration filed with the Clerk of the Peace for the County of York, 17th September, 1879, with the corporate name of the Real Estate Loan and Debenture Company. Decl. Book II, p. 57.

Letters patent of Canada (6th April, 1883) incorporating the Company under The Canada Joint Stock Companies Act, 1877, with the corporate name of The Real Estate Loan Company of Canada, Limited.—Lib. 85, folio 282, Office of the Registrar-General of Canada. The capital authorized by this instrument was $2,000,000, being the capital of the said The Real Estate Loan and Debenture Company, with the same powers throughout Canada as now possessed by the said The Real Estate Loan and Debenture Company, and for the same purposes and objects, subject always to the provisions of the said last mentioned Act (Canada J. S. Co's. Act, 1877), and with all such further powers, purposes and objects as are conferred upon Loan Companies incorporated under the provisions of the said last mentioned Act..

1884. Act of the Dominion of Canada, 47 V. c. 101 (D), respecting sales of assets.

Supplementary Letters Patent of Canada, 20th June, 1892, reciting By-law No. 62 of the Company, and (as therein provided), reducing the capital stock from $2,000,000 to $1,600,000.

1913. Act of the Dominion of Canada, 3-4 George V, c. 184, increasing capital stock to $2,000,000 in shares of $100 each par value.

CONSTATING INSTRUMENTS

Incorporated under The Building Societies Act (Consol. Stat. U.C., c. 53), by declaration, dated 12th March, 1870, and filed with the Clerk of the Peace for the County of Lincoln on the 21st March, 1870. The original corporate name was The Security Permanent Building and Savings Society of St. Catharines.

The corporate name was changed to The Security Loan and Savings Company, St. Catharines, in 1876 by 39 Vic., c. 64 (D); and also by Order-in-Council of Ontario, dated 18th August, 1876.

The authorized Capital Stock was increased from $300,000 to $500,000 on the 29th June, 1911. This increase was approved of by Order-in-Council of Ontario, dated 12th July, 1911.

The authorized Capital Stock was further increased from $500,000 to $1,000,000 on the 9th March, 1916. This increase was approved of by Order-in-Council of Ontario, dated 14th March, 1926.

The lending and the borrowing powers of the Company are governed by The Loan and Trust Corporations Act, R.S.O. 1927, chap. 223.

THE HOME BUILDING AND SAVINGS ASSOCIATION—Continued

CONSTATING INSTRUMENTS

Incorporated under The Building Societies Act (R.S.O. 1887, c. 169), by declaration filed with the Clerk of the Peace for the County of Carleton, on the 24th June, 1890. (Decl. Book II, 119.) The Company, for purposes of distinction, ordinarily uses the words "of Ottawa" as part of its corporate name, but these words do not appear in the declaration of incorporation.

The lending and the borrowing powers are governed by The Loan and Trust Corporation Act, R.S.O. 1927, c. 223.

		$ 414,872 29

CONSTATING INSTRUMENTS

Incorporated as "The Toronto Real Estate Investment Company" by Letters Patent of Ontario (June 15th, 1885), issued under The Ontario Joint Stock Companies' Letters Patent Act, R.S.O. 1877, c. 150. Supplementary Letters Patent of Ontario (29th December, 1887), were issued under R.S.O. 1887, c. 157, defining the borrowing powers, etc. Further Supplementary Letters Patent of Ontario (25th September, 1889) were issued under the last mentioned Act, increasing the capital stock from $400,000 to $2,000,000. Further Supplementary Letters Patent of Ontario (30th March, 1891) were issued under the same Act, conferring agency powers on the Company. The corporate name was by Order-in-Council (2nd April, 1891) changed to "The Toronto Savings and Loan Company."

For the lending and borrowing powers, see the Letters Patent and the Acts, R.S.O. 1877, c. 150; R.S.O. 1887, c. 157; R.S.O. 1914, chap. 184; R.S.O. 1927, chap, 223.

CONSTATING INSTRUMENTS

The British Mortgage Loan Company of Ontario was incorporated by Letters Patent of Ontario, dated October 5th, 1877 (Lib. 5, No. 52), issued under R.S.O. 1877, c. 150, which Act was continued by R.S.O. 1887, c. 157, and was as to Loan Corporations superseded by 60 V, c. 38 (O), now R.S.O. 1927, c. 223.

By 16 George V, c. 121, the company was given trust company powers and its name changed to the British Mortgage and Trust Corporation of Ontario.

The lending and the borrowing powers of the company are derived from its Letters Patent and the above public general statute.

(e) Agency fees and commissions	43 95	
	———$	55,753 27
5. Amount of interest permanently capitalized during the year		2,285 50
6. Amount of Company's own Guaranteed Investment Receipts and interest thereon, due and unpaid		498 50

CONSTATING INSTRUMENTS

Incorporated by declaration filed 11th May, 1885, with the Clerk of the Peace for the United Counties of Leeds and Grenville. The declaration was made by virtue of "The Building Societies Act," R.S.O. 1877, c. 164, continued by R.S.O. 1887, c. 169, and superseded by 60 Vic., c. 38 (O), now R.S.O. 1897, c. 205. See R.S.O. 1927, c. 223.

The lending and borrowing powers are derived from the above public General Acts.

By a Special Act of the Legislature of Ontario, 18 Geo. V, c. 130, the Company was granted the powers of a trust company and its authorized capital stock was increased from $500,000 to $1,000,000. Its name was changed to The Brockville Trust and Savings Company.

CONSTATING INSTRUMENTS

The Canada Permanent Trust Company was incorporated in 1913 by a special Act of the Parliament of the Dominion of Canada, 3-4 Geo. V, c. 87.

Authorized by Order-in-Council (May 7th, 1913), to carry on business in the Province of Ontario as a Trust Company, pursuant to the provisions of The Loan and Trust Corporations Act, R.S.O. 1927, c. 223.

In 1927 the Company purchased the assets and business of the Brantford Trust Company, which purchase was ratified by Order-in-Council of Ontario, dated 31st day of August, 1927, pursuant to The Loan and Trust Corporations Act.

(c) Interest on bonds and debentures	1,620 73	
(d) Agency fees and commissions	91,214 98	
		$ 211,638 57
5. Amount of Company's own Guaranteed Investment Receipts and interest thereon, due and unpaid		28,086 39

CONSTATING INSTRUMENTS

Incorporated on the 23rd July, 1894, by special Act of the Dominion of Canada, 57-8 Vict. (1894), chap. 115, under the name of The General Trusts Corporation of Canada.

By a subsequent special Act, 62-3 Vict., chap. 111 (D), passed on the 11th August, 1899, the corporate name was changed to The Canada Trust Company, and certain other amendments were made in the incorporating Act.

The powers of the Company are defined by sections of the incorporating Act, which powers are (section 4) to be deemed subject to the laws of the Province.

3. Dividends to shareholders declared during year	$	59,556 96
4. Amount transferred to Reserve Fund		15,000 00
5. Balance of account at December 31st, 1930		5,633 19
Total	$	80,190 15

MISCELLANEOUS

1. Officers of the Corporation who are under bond for the following amounts respectively: Estates officer, $10,000; general manager, $10,000; secretary, $10,000.

2. Dividends and bonuses declared during year giving (a) dates declared; (b) dates payable; (c) rates: (a) March 20th, June 19th, August 21st, November 6th; (b) 1st January, April, July, October; (c) 1½% at the rate of 6% per annum.

3. Date appointed for the Annual Meeting, February 26th, 1931. Date of last Annual Meeting, February 20th, 1930.

4. In the case of any company whose stocks, bonds or debentures are held by the Corporation either directly or indirectly, if such company is otherwise indebted to the Corporation upon loans either secured by mortgages or other security, or unsecured, state the aggregate amount of such loans

4. ... state the aggregate amount of such loans	$	5,150 00
The aggregate amount of instalments of principal in arrears		1,350 00
The amount of interest due and unpaid, whether capitalized or not		257 87
The amount of interest on such loans taken credit for in the Profit and Loss Account during the year		266 60

5. Amount of contingent liability not shown as direct debts in the foregoing statement. The company has a certain contingent liability under its Guarantee of Titles to lands given when the company was issuing Guarantee of Titles. This business was discontinued fifteen years ago and no claim has been made during that time, and the outstanding Guarantees of Titles are contantly diminishing in number through expiration.
The liability at the worst is only nominal.

6. Amount of actual cash receipts during the year (excluding

Guaranteed and Trust Account receipts) for:

(a) Interest on mortgages and agreements for sale	$ 16,803 42		
(b) Interest on loans on collateral security, including interest on advances	18,697 95		
(c) Interest on bonds and debentures	21,707 99		
(d) Dividends on stocks	1,656 08		
(e) Agency fees and commissions	258,069 34		
		$	316,934 78
7. Amount of interest permanently capitalized during the year			3,654 01

CONSTATING INSTRUMENTS

The Title and Trust Company was incorporated in 1905, by Special Act of the Parliament of Canada, 4-5 Edward VII, chap. 162 (Royal Assent, 20th July, 1905). By Section 19 of this Act the Company was required to make an initial deposit with the Receiver-General of Canada to carry on the business of Title Insurance, the said deposit to be increased to $75,000 within two years from the date of the issue of such license, and to be further increased as the Treasury Board may from time to time require.

In 1907, by Special Act of the Province of Ontario, 7 Edward VII, chap. 118, the Company was, upon the conditions therein specified, made admissible to registry under The Loan Corporations Act, and initial registry was granted on the 30th August, 1907.

April 8th, 1914. Amendment to charter changing name to Chartered Trust and Executor Company.

May 1st, 1929. Special Act increasing capital from $1,000,000 to $2,500,000.

CONSTATING INSTRUMENTS

The Grey and Bruce Trust and Savings Company, cited 16 Geo. V (1926), c. 123. This Act confirms the amalgamation of the Grey and Bruce Loan Company and the Owen Sound Loan and Savings Company, and constitutes the amalgamated corporation a new corporation under the name of The Grey and Bruce Trust and Savings Company, with head office in the City of Owen Sound, and empowers the new corporation to carry on the business of a trust company under The Loan and Trust Corporations Act.

The Grey and Bruce Loan Company was incorporated under The Building Societies Act, R.S.O. 1887, c. 169, as a permanent building society under the name of the Owen Sound, Grey and Bruce Loan and Savings Company, by declaration filed with the Clerk of the Peace for the County of Grey, 10th May, 1889. The corporate name was by Order-in-Council of Ontario, 15th September, 1897, changed to the Grey and Bruce Loan Company.

The Owen Sound Loan and Savings Company was incorporated under The Building Societies Act, R.S.O. 1887, c. 169, by declaration filed with the Clerk of the Peace for the County of Grey, on the 1st April, 1889.

CONSTATING INSTRUMENTS

Incorporated on the 17th September, 1896, by Letters Patent of Ontario, issued under The Ontario Joint Stock Companies' Letters Patent Act, R.S.O. 1887, chap. 157. See also The Loan and Trust Corporations Act, R.S.O. 1927, chap. 223.

February 18th, 1929. Order-in-Council confirming By-law No. 14 of the Corporation to increase the capital stock from $500,000 to $1,000,000.

August 21st, 1929. Order-in-Council confirming By-law No. 18 of the Corporation to increase the capital stock from $1,000,000 to $5,000,000.

On the 10th day of September, 1929, His Honour the Lieutenant-Governor approved by Order-in-Council the removal of the head office of The London and Western Trusts Company, Limited, from the City of London to the City of Toronto.

By an agreement, dated the 15th day of October, 1929, The London and Western Trusts Company, Limited, of London, Ontario, purchased the assets and liabilities, business, rights, property and goodwill, etc., of the Standard Trusts Company with head office in Toronto, Ontario. The agreement was ratified and confirmed by the shareholders of both companies and was subsequently approved by the Lieutenant-Governor in Council. The transfer became effective as of the 18th day of December, 1929. The Standard Trusts Company had, by authority of By-law No. 35, moved its head office from Winnipeg to Toronto, and was granted registry in Ontario under date of October 26th, 1929.

   No advances made to Directors during 1930.

   Advances made in prior years but still outstanding as at December 31, 1930, $12,500.00.

CONSTATING INSTRUMENTS

The Montreal Trust Company was incorporated on the 21st day of March, 1889, by special Act of the Province of Quebec, 52 Vic. c. 72 (Q), and subsequent special amending Act, under the name of the Montreal Safe Deposit Company.

By special Acts the name was changed in 1895 to the Montreal Trust and Deposit Company (59 Vic. c. 70 (Q), and again in 1909 to the Montreal Trust Company (9 Edw. VII, c. 115 (Q).

Authorized by Order-in-Council to carry on business in the Province of Ontario as from the 11th day of March, 1909, subject to certain conditions and limitations.

Registered on the Trust Companies Register, 21st January, 1913.

The Company has a deposit with the Province of Ontario, amounting to $200,000.00.

CONSTATING INSTRUMENTS

The Prudential Trust Company, Limited, was incorporated in 1909 by a special Act of the Parliament of the Dominion of Canada, 8-9 Edward VII, chapter 124.

Authorized in 1911 by special Act of the Legislature, 1 Geo. V, chapter 139, to transact business in the Province of Ontario as specified in Section 1 (5) of the said Act, which enacts as follows:

"(5) The Company shall be limited in respect of all business relating to property, rights or interests in the Province of Ontario, to the powers mentioned in this Act or granted from time to time to trust companies by any Public Act or Order of the Lieutenant-Governor in Council of the said Province and shall be subject to the general public law of the said Province relating to trust companies and trusts."

The Company has a deposit in the Province of Ontario amounting to *$50,000.00.

** Under the provisions of 1 Geo. V, c. 139, as amended by 10 Geo. V, c. 158, the deposit as security to do business in Ontario may be fixed from time to time by the Lieutenant-Governor in Council. By Order-in-Council, dated June 15th, 1920, the Company's deposit of "200,000 was exchanged for one of "50,000.00, the public liability in Ontario being at that time $1,123.43 on Trust Account and $26,167.14 of assets under administration.*

CONSTATING INSTRUMENTS

The Royal Trust Company was incorporated in 1892, by Special Act of the Province of Quebec, 55-56 Vict., chap. 79, which was amended by 55-56 Vict. (1892), chap. 80 (Q), and by 59 Vict. (1895), chap. 67 (Q), and by 63 Vict. (1900), chap. 76 (Q), 6 Edw. VII, chap. 73, 17 Geo. V, chap. 117 (Q), 19 Geo. V, chap. 116 (Q).

Authorized by Special Act of the Legislature of Ontario, 2 Edw. VII, chap 103, to transact business therein as specified in Section 1 (5) of the said Act, which enacts as follows:

> "(5) The Company shall be limited in respect to all business relating to property, rights or interests in the Province of Ontario, to the powers mentioned in the schedule to The Ontario Trusts Companies' Act, and shall be subject to the general provisions of the said Act and of the general public law of the said Province relating to trust companies and trusts."

The Company has a deposit in the Province of Ontario amounting to $200,000.00.

CONSTATING INSTRUMENTS

Incorporated under The Building Societies Act, 1887, c. 169, as amended by 56 Vic., c. 31 (O), by declaration filed with the Clerk of the Peace for the County of Victoria, on the 4th September, 1897.

The operations of the Company were for a time by law restricted to the County of Victoria (56 Vic., c. 31) continued by R.S.O. 1897, c. 205, s. 8 (4); but the Company, having fulfilled the statutory requirements, was by Letters Patent of Ontario, bearing date 11th November, 1898, relieved from the above restriction of its operations.

By a special Act of the Legislature of Ontario, 13-14 Geo. V, c. 107, the Company was granted the powers of a trust company and the name was changed to The Victoria Trust and Savings Company. (See also The Loan and Trust Corporations Act, R.S.O. 1927, chap. 223.)

FILED BY

Loan and Trust Corporations

MARCH 31st, 1930, TO DECEMBER 31st, 1930, INCLUSIVE

Pursuant to Sections 45 or 18 a (3) of the Loan and Trust Corporations Act.

Sec. 45. Every loan company receiving deposits shall make a sworn return to the Registrar quarterly on the 15th days of January, April, July and October in each year, drawn in accordance with the form prescribed from time to time by the Registrar, showing the amount of such deposits and showing the amount of cash on hand and on deposit and the amount of debentures, bonds, stock or other securities of or guaranteed by the Dominion of Canada, and of or guaranteed by any province of Canada less any incumbrances thereon and the amount of bonds, debentures and other securities of any municipal corporation in Ontario or of any city in Canada, less any incumbrances thereon and the principal amount of any moneys payable to the company on demand the payment of which is secured by the mortgage or pledge of any of the securities hereinbefore in this section mentioned as the said amounts stood at the end of the last preceding month, and stating that the same were at the date mentioned in such return on hand and available for depositors.

Sec. 18a.—(3) Every trust company receiving deposits in the manner authorized by subsection 3 of section 18 shall make a sworn return to the Registrar quarterly on the 15th days of January, April, July and October in each year, drawn in accordance with the form prescribed from time to time by the Registrar, showing the amount of such deposits and showing the amount of cash on hand and on deposit, and the amount of debentures, bonds, stock or other securities of or guaranteed by the Dominion of Canada, and of or guaranteed by any province of Canada, less any incumbrances thereon, and the amountof bonds, debentures and other securities of any municipal corporation in Ontario or of any city in Canada, less any incumbrances thereon, and the principal amount of any moneys payable to the company on demand, the payment of which is secured by the mortgage or pledge of any of the securities herein before in this subsection mentioned, as the said amounts stood at the end of the last preceding month, and including in such statement all such cash and securities and loans as defined in this subsection, whether owned by the company or held by it as guaranteed investments under the provisions of subsection 2 of section 17, or subsection 4 of section 18, and stating that the same were at the date mentioned in such return on hand and available for depositors.

Securities Allocated

FILED BY

TRUST COMPANIES

MARCH 31st, 1930, TO DECEMBER 31st, 1930, INCLUSIVE

Pursuant to Section 18a (2) of the Loan and Trust Corporations Act.

Sec. 18a. (2) Every trust company receiving funds for guaranteed investment as mentioned in subsection 1 of section 16 shall make a sworn return to the Registrar quarterly on the 15th day of January, April, July and October in each year, drawn in accordance with the form prescribed from time to time by the Registrar, showing the amount of such funds, and showing all securities, including loans on securities, and cash, including money on deposit, ear-marked and definitely set aside as provided in subsection 2 of section 17, as the said amounts stood at the end of the last preceding month, and stating that the same were at the date mentioned in such return, so ear-marked and definitely set aside.

REPORT

OF THE

Minister of Public Works

FOR THE

PROVINCE OF ONTARIO

FOR THE

TWELVE MONTHS ENDING 31st OCTOBER

1930

PRINTED BY ORDER OF
THE LEGISLATIVE ASSEMBLY OF ONTARIO
SESSIONAL PAPER No. 8, 1931

ONTARIO

TORONTO
Printed and Published by Herbert H. Ball, Printer to the King's Most Excellent Majesty
1931

TO HIS HONOUR WILLIAM D. ROSS, ESQ.,
Lieutenant-Governor of the Province of Ontario.

MAY IT PLEASE YOUR HONOUR:

As required by law, I submit for the information of Your Honour and the Legislative Assembly, the Annual Report of the works under the control of the Public Works Department, comprising the reports of the Deputy Minister, the Architect and the Engineers for the twelve months ending the 31st of October, 1930.

Respectfully submitted,

J. D. MONTEITH,
Minister of Public Works and Labour.

Department of Public Works, Ontario,
Toronto, March 5th, 1931.

REPORT

OF THE

Deputy Minister of Public Works

HONOURABLE J. D. MONTEITH, M.D.,
Minister of Public Works.

SIR,—

I have the honour to submit a summary of the works performed by the Department of Public Works during the fiscal year ending October 31st, 1930.

Parliament and Departmental Buildings.—A complete rearrangement of the seating in the Legislative Chamber was completed and an adequate ventilating system for the Chamber was installed. The old west end elevator which was practically worn out was replaced by two modern passenger elevators. The old coal weigh scale was removed from the courtyard of the Parliament Buildings and installed in a convenient location for the present central heating plant in the East Block. On account of increased staff in some Departments, it was necessary to take certain offices out of the Parliament Buildings and provide space in the buildings around Queen's Park. This involved the fitting up of No. 1 Queen's Park for the Neglected and Dependent Children's Branch. New stokers were installed under two boilers in the East Block in order to prevent complaints of smoke nuisance. The new stokers are giving complete satisfaction.

At Government House some curbing and some of the sidewalks affected by settlement were renewed, and a penetration roadway constructed where traffic conditions required. New stoker to economize fuel was installed.

Maintenance and Repairs of Government Buildings.—Repairs and renewals required on Government Buildings were executed, together with decorating of certain rooms at Government House and Osgoode Hall.

Educational Buildings.—At School for the Deaf, Belleville, the steam distributing mains were renewed and installed in concrete trenches in order to improve the heating system. The sewage pumping system to the sewage system of the city of Belleville was completed, and the dumping of sewage in the Bay of Quinte was discontinued. Plans and specifications were furnished for the addition to the Mining School at Haileybury, work to be carried out by the High School Board of Haileybury. Improvements to the lighting systems at the Normal Schools at Hamilton, Stratford, Penetang, London, and North Bay were carried out. At the Continuation School at Charlton a water supply system was installed.

Agricultural Buildings.—At Ontario Agricultural College, Guelph, work on the new Administration Building and Students' Residence is now nearing completion. The power house and railway siding were finished, new boilers installed and in operation, and this new central heating system is giving satisfaction. The Girls' Residence, for the accommodation of forty-three students, is proceeding and is almost completed. The Horticultural Building was completed and occupied. Extensive greenhouses in connection with the Horticultural Building are in process of erection. A new wing was added to the dairy barn. The water supply and fire protection was improved by the addition of a 50,000-gallon elevated steel water tank, together with the necessary connecting mains and valves. Automatic refrigeration, together with an incubator room, was provided in the Veterinary College. General repairs were looked after. At Agricultural School, Kemptville, an additional storey was added to the mechanics building, a greenhouse was completed and general repairs attended to. At Western Ontario Experimental Farm, Ridgetown, the addition to the school building was completed and is now occupied. Alterations and additions were made to the superintendent's residence. Repairs and painting were also carried out. At Horticultural Experimental Station, Vinelands, a staff cottage and also a double labourers' cottage were completed by day labour. A brick garage for four cars was finished and also an addition to the frame garage. At Demonstration Farm, New Liskeard, a new hen house and hog pen were built by day labour. At the Cold Storage Plant at Brighton, considerable renovation was finished in order to put the building in a proper state of repair.

Public Institutions.—Extensive alterations to the kitchen and refrigeration at Ontario Hospital, Kingston, were completed, while at the Mowat Wing remodelling repairs were finished. At Ontario Hospital, Mimico, a new laundry building was finished and installation of laundry machinery is now under way. The new nurses' residence was also commenced and will be completed shortly. At Ontario Hospital, Orillia, a new boys' dormitory was commenced to provide accommodation for 150 boys. A nurses' residence was also commenced. On account of proposed rearrangement of the buildings, so as to provide frontage for the institution on the King's Highway, it was considered necessary to remove the water tank to a position well removed from the buildings. In order to provide uninterrupted water supply in case of fire, a new tank was purchased and erected, while the old tank from Orillia was moved to Ontario Hospital, Penetang. At Ontario Hospital, Whitby, the construction of a stores building was commenced. At Ontario Hospital, Woodstock, extensive additions, comprising male and female dormitories, to house in all 300 patients, together with central dining hall, central heating plant, railway siding and pipe tunnels, etc., were commenced. While the new accommodation provided is only for 300 patients, the removal of dining hall accommodation from existing buildings will materially add to space that can be allotted to patients, so that the additions to the institution now being made will actually provide for over 500 additional patients. At Boys' Training School, Bowmanville, a summer camp dining room was erected close to the shore of Lake Ontario. At Ontario Hospital, London, water supply was improved by deepening the drilled well.

District Buildings.—A new Jail was completed and occupied at Kenora. A new Jail was completed and occupied at Sudbury. A new Jail was completed and occupied at North Bay. At Fort Frances, the old Registry Office was remodelled for the use of the Provincial Police.

London, England.—The Ontario Government building at 163-164 Strand was entirely reconstructed. As far as possible Ontario materials were used in these operations. The front of the building is of Queenston limestone. Ontario marble and Ontario woods were used for the interior trim, and floor covering manufactured in Ontario was also provided.

Engineer's Report.—During the year we built 114 new bridges, of which 4 were built of steel and concrete, 47 were reinforced concrete, 27 steel beam structures and 36 timber bridges. At the head waters of the Black River in the Township of Longford, three concrete dams were constructed in order to control these waters, so as to prevent flooding in the vicinity of the Village of Longford, and also aid in the control of the water for power development purposes on the Severn River. One dam was constructed at the outlet of Rainy Lake, one dam was constructed at the outlet of Trout Lake, and a wing dam was constructed across the opening at the south end of Trout Lake. Local Railway, Lumbering, Industrial and Power interests contributed in cash towards the construction of these dams. A new concrete dam was constructed at the outlet of Paudash Lake, in the Township of Faraday. A new masonry dam was constructed at the outlet of Healey Lake, in the Township of Conger.

The dredge during the working season was engaged on the Muskoka Lakes, providing a satisfactory entrance to the mouth of the Muskoka River, also improving the navigation in the river at Bracebridge and in the vicinity of Port Sandfield.

Drainage Aid.—Thirteen Municipal drainage works were inspected and statutory grants paid.

A new steel swing bridge over the canal at Huntsville was constructed, while repairs to locks, dams and swing bridges on inland navigation under the control of the Department were carried out.

The report on contractors for materials and works during the year follows.

The Accountant's Report gives the cost in detail of the expenditure by the Department of Public Works, during the year, and the following is a summary of expenditures.

Civil Government:		
Salaries, contingencies, etc		$81,440 69
Government Buildings:		
Maintenance and repairs		809,183 23
Public Buildings:		
Parliament Buildings, Hospitals, Schools, Court Houses, etc		2,324,489 81
Public Works:		
Locks, dams, bridges, drainage, etc		241,069 45
Drainage Aid:		
Aid to Municipalities under Drainage Act		61,368 00
Special Warrants:		
Decoration of Government Buildings	$8,863 18	
Grilles and prison cells for Town Hall, Sturgeon Falls	1,100 00	
Rebuilding stone-crushing plant, Ontario Reformatory, Guelph	7,160 26	
		17,123 44
Statutory:		
Minister's salary		9,999 96
Total expenditure, Department of Public Works		$3,544,674 58

I have the honour to be
Sir,
Your obedient servant,
GEO. HOGARTH,
Deputy Minister of Public Works.

Toronto, March 5th, 1931.

HON. DR. J. D. MONTEITH,
Minister of Public Works.

SIR,—

I have the honour to report on the work done in the Architect's Branch of the Department of Public Works for the year ending October 31st, 1930.

IN MEMORIAM

The Department, by the death on September 30th, 1930, of Mr. Frank Ryley Heakes, the architect, suffered the loss of a faithful public servant.

Mr. Heakes had his early training in Toronto and served in the office of William Irving. He joined the staff of the Public Works Department under Mr. Kivas Tulley, the architect, in 1883. On the death of Mr. Tulley he was appointed to the position of architect, which position he held for thirty-four years.

During that period Mr. Heakes carried out, under his supervision, many important works, among the buildings of importance during his latter years of office are the following,—Government House, Court Houses at Sault Ste Marie, Port Arthur, Fort Frances, Haileybury and Cochrane. Gaols at Sault Ste Marie, Port Arthur, Sudbury, North Bay and Kenora. At the Ontario Agricultural College, Guelph, the following buildings were erected,—Dining Hall, Poultry Building, Field Husbandry Building, Apiary Building, Physics Building, Maids' Dormitory, Dairy Building, Veterinary College and the Horticultural Building. The last outstanding building carried out by him is the East Block, the extension to which building is now being carried out in accordance with his original plans for its development.

Parliament Buildings.—The buildings, including East Block, Nos. 1, 15, and 43 Queen's Park, 110 University Avenue, Highways and Provincial Police garages have been kept in good repair. Some of the offices have been redecorated, the corridors of East Block have been painted and work commenced of painting the offices.

In the Legislative Chamber a rearrangement of the seating was made; the seats being placed in a horseshoe shape about the throne. A new ventilation system was also installed.

The old stokers under Nos. 1 and 2 boilers were removed and shipped to Ontario Hospital, Woodstock, for use in the new power plant. These were replaced by a modern type of stoker having a much greater capacity.

The old elevator in the west end of the Parliament Buildings has been replaced by two modern elevators. One of them being equipped with automatic push button controls for night service, when an operator is not on duty. Considerable structural changes were necessary to house the new elevators, the work being done under contract by Mr. J. S. Laxton. The elevators being supplied by the Turnbull Elevator Co. of Toronto.

Alterations were made to the marble work in the corridor leading to the north wing to allow of the names of the Members of the Ministry from 1926-1929 being cut.

The old scales were removed from the Parliament Buildings and new scales installed by the coal vault of the East Block.

Alterations were made and additional vault space provided to No. 43 Queen's Park, to provide accommodation for the new Department of Public Welfare.

A considerable number of minor alterations were carried out and a considerable number of fittings were designed and installed in different offices.

Alterations were made to No. 1 Queen's Park and the rooms painted to provide accommodation for the Department of Neglected and Dependent Children, which was removed from the Parliament Buildings.

In honour of the International Convention of the Mystic Shrine, the grounds of Queen's Park, the Parliament Buildings, East Block, Osgoode Hall and Normal School were decorated.

Repairs have been made to the offices of the Liquor Control Board, 110 University Avenue, to keep the buildings in good condition.

Government House.—The residence and buildings in connection with the same have been kept in good repair and a new mechanical stoker has been installed. The sidewalks and curbs were renewed and roadways put in good condition. Furniture and furnishings were renewed as necessary.

Osgoode Hall.—Work necessary to keep the building in repair was carried out. Several of the offices were repainted. A cashier's cage was provided for the Public Trustee and several fittings were designed and erected in the different offices.

EDUCATIONAL BUILDINGS

Repairs and painting have been done, as required, to the Normal and Model Schools, Toronto and Ottawa; Normal Schools at Hamilton, London, North Bay, Peterborough and Stratford; the English, French Training Schools at Embrun, Sandwich and Sturgeon Falls; The Ontario School for Deaf, Belleville, Ontario School for Blind, Brantford, and the Northern Academy, Monteith. New electric fixtures have been installed in the five Normal Schools.

New furniture and fittings were designed and installed and minor alterations carried out as required in the above buildings.

At the School for the Deaf, Belleville, new steam mains in concrete trenches were installed for heating the Boys' and Girls' Dormitory Buildings, and the Principal's residence to replace old mains. Repairs to boiler house and bricking in of boilers were carried out.

Plans and specifications were prepared for an addition to the Mining School at Haileybury. The contracts have been let and the work is being carried out by the Local High School Board under the supervision of the Department.

Plans were submitted by the Department of Education for examination and approval of the Technical School, Fort William.

AGRICULTURAL BUILDINGS

Ontario Agricultural College, Guelph.—The work on the new Administration Building and Students' Residence has progressed favourably and is now nearing completion. A description of this building will be found in the Architect's report for 1929.

The Power House is practically completed and the new boilers and machinery installed and in operation.

Plans and specifications were prepared for the reconstruction of and an addition to the old "Graesser House" for additional accommodation for women students. Before the work could be commenced, fire destroyed the old house and it was thought advisable not to reconstruct the old building, but to slightly increase the size of the addition, making an entirely new building. The building is 96 feet long and 45 feet 6 inches wide and will house forty-three women students. The outside walls have a stone base with tapestry brick superstructure and the building is of fireproof construction throughout.

The Horticultural Building was completed and is now in occupation. In connection with the Horticultural Department greenhouses were designed and are in the course of construction. These consist of a display house 40 feet by 40 feet with 17 feet by 17 feet entrance section. From this building extends a corridor connecting seven glass houses of the following dimensions, 40 feet by 100 feet; 36 feet by 100 feet; 30 feet by 100 feet; three 22 feet by 100 feet and 15 feet by 100 feet. At the end of the connection corridor is a service building 40 feet by 60 feet, built of brick and consisting of five work rooms and storage rooms. The glass part of these buildings is being built by the King Construction Co., and the concrete foundations and other parts of the work by Jackson-Lewis Co., all under contract.

A new wing was added to the Dairy Barns. This addition is 98 feet by 36 feet, and provides for twenty-three head of cattle in separate stalls and seven box stalls for cattle and five stalls for calves on the lower floor The superstructure is a storage barn with 10-foot walls and steel truss construction. A granary is provided for on this floor.

A new steel tower water tank was built with brick heater house for heater for winter protection. New water mains were laid and connected up with the new tank, fire pump and the fire protection mains of the College.

Sundry repairs and painting were carried out to the various other buildings as required.

In the Veterinary College, a new electric automatic refrigerator was built and also an incubator room.

Agricultural School, Kemptville.—Plans and specifications were prepared for an additional storey to the Mechanics Building and the work carried out under contract by R. Beggs & Son of Hallville.

Plans were prepared for a greenhouse and the work was carried out under contract by the King Construction Co. for the glass superstructure, and the foundations by R. Beggs & Son of Hallville.

Repairs, painting and incidental work was carried out to the other buildings as required.

Western Ontario Experimental Farm, Ridgetown.—The addition to the School building was completed and is now in occupation. The interior of the old school building was painted.

Alterations and additions were made to the Superintendent's Residence to provide a sun room, kitchen and garage and repairs carried out to the other buildings as required.

Eastern Dairy School, Kingston.—Repairs and painting were carried out as required.

Vimy Ridge Farm.—Repairs and painting were carried out as required.

Horticultural Experimental Station, Vineland Station.—Plans and specifications were prepared for a staff cottage and for a pair of labourer's cottages which were built by day labour under the supervision of the Director.

A brick garage was built with a capacity for four cars and an addition to the frame garage was made, giving a further accommodation for four cars.

Other buildings were kept in repair.

Demonstration Farm, New Liskeard.—A new hen house and hog pen were built under the supervision of the Farm Superintendent from plans prepared by the Department.

Repairs were carried out to other buildings as required.

Cold Storage Plant, Brighton.—The lower floor of this building collapsed from rot and it was found necessary to rebuild this floor. This was done of fireproof construction with concrete columns and reinforced concrete floor. Should it be desired at any time to further strengthen or fireproof this building, the new foundations will be of sufficient strength to allow this to be done.

PUBLIC INSTITUTIONS

Ontario Hospital, Kingston.—Plans and specifications were prepared for an extension to the main kitchen. The new addition provides a large modern kitchen, well lighted and sanitary, in which are located the range, bake oven, kettles and other cooking equipment. Adjoining the kitchen is a large well-equipped vegetable preparation room. Also adjoining the kitchen is a room for the making of pastry rolls, etc. The old kitchen section is remodelled into cold storage rooms, separate compartments being provided for meats, dairy products, fish and daily stores. A meat cutting and preparation room is also provided. Adjacent to stores, a milk pastuerizing room is provided. There is also an ice-making room which is run from the new refrigerating plant which is installed in the basement. Other part of the old kitchen is fitted up as store rooms. The floors and wall dadoes are all tiles with Mimico tile, making a sanitary finish. The work of the general contract was carried out by George Clark Wright of Kingston, the heating by Lemon & Sons of Kingston and the refrigeration by the Canadian Ice Machine Co. of Toronto.

Mowat Wing.—The work in connection with the remodelling of this wing has been completed.

Ontario Hospital, Mimico.—Plans and specifications were prepared for a new Laundry Building. This building was constructed under contract by the Herrod Construction Co. of Mimico for general trades, the plumbing and heating by Sheppard & Abbott of Toronto, and the electric wiring by the Patterson Electric Co. of Toronto. This building is 119 feet by 75 feet, one storey in height with basement in one portion, containing the heating equipment, water softener, etc. The laundry is modern in every way with new modern machinery, is well lighted and well equipped for the comfort of the workers.

Plans and specifications were also prepared for a new Nurses' Residence which was constructed under contract by H. N. Dancy & Sons of Toronto, the plumbing and heating being done by J. H. Doughty Limited of Mimico, and the electric wiring by the Patterson Electric Co. of Toronto. The building is 123 feet by 40 feet and will accommodate sixty-three nurses, with separate quarters for night nurses and for sick nurses. Reception and common rooms and special apartments for the supervising staff, also lecture and demonstration rooms are provided.

Ontario Hospital, Orillia.—Plans and specifications were prepared for a new Boys' Dormitory building, the work is being done under contract by E. Webb & Sons of Orillia. This building is 246 feet long by 40 feet wide and will house one hundred and fifty boys. Dining rooms, playrooms, etc., are provided for the comfort of the patients and small kitchens for special diets are provided. There is no regular kitchen, the food being brought in insulated trucks from the Main Institution kitchen through covered passageways, which connect all the buildings together, to a large servery from where meals are served up.

Plans and specifications were also prepared for a Nurses' Residence, which is being built under contract by E. Webb & Sons of Orillia. This building is 150 feet by 40 feet and provides accommodation for ninety-six nurses with separate sections for night nurses and supervising staff. An Infirmary for the nurses is also included and recreation and study rooms. In the well lighted basement are provided completely fitted up hospital demonstration rooms and class rooms for the instruction of the nurses. Connecting these new buildings with the present are covered passageways so that patients may move from one building to another with comfort in all kinds of weather. Tunnels for the heating and other services are provided under the passageways.

The new buildings have necessitated extensions to the sewage mains and alterations to the water mains.

A new water tank is being provided in new position and when complete and in operation the present tank will be removed to give place for future extension of buildings.

A new elevator was provided in the Laundry Building and the contract awarded to the Roelofson Elevator Works of Galt.

Ontario Hospital, Whitby.—Plans and specifications were prepared for a new stores building and the work is being done under contract by J. S. Stacey, contractor, Trenton. The building is 184 feet by 50 feet and containing store rooms for all variety of stores required for the Institution. Cold storage rooms are also provided and an ice making plant. A milk pastuerizing plant is provided. The building is conveniently located with regard to the railway siding and for service to the institution. A modern scale is also provided of capacity to weigh all fuel or other merchandise supplied to the institution.

Ontario Hospital, Woodstock.—Plans and specifications were prepared for additions to this institution, consisting of a dormitory with capacity for one hundred and fifty men and dormitory with capacity for one hundred and fifty women; a central dining room; central heating plant, connecting passageways; pipe tunnels for heating mains and alterations to sewerage system. The Dormitory buildings are so arranged as to take advantage of the maximum sunlight. Hospital and treatment rooms are provided for the care of those needing special medical attention, day rooms and other accommodation are provided for the comfort of the patients.

The central dining room building is capable of seating five hundred and forty patients with separate rooms for male and female nursing staff and for other help. In connection with the dining rooms, is a modern equipped kitchen. Vegetable preparation rooms, store rooms and cold storage rooms are provided, also an ice making plant and milk pasteurizing room. All kitchen and adjoining rooms have floors and wall dadoes tiles with Mimico tile.

The central heating plant is conveniently located at the foot of the hill on which the institution stands. This building is equipped with boilers, equipment and necessary pumping equipment, coal vaults, etc. This building also houses the sewage tanks from which all sewage is now pumped up into the town of Woodstock sewers; the old institution sewage disposal system has been abandoned. From this building extends steam mains in concrete pipe trenches to all the institution buildings for heating or cooking purposes. A railway siding has been provided for the unloading of fuel. Connecting passages have been provided between the new Dormitory buildings and the dining room, so that patients may pass in comfort from one building to the other.

The whole of the above buildings are being constructed under contract by the Schultz Construction Co. of Brantford, the heating and plumbing by Bennet & Wright Co. Limited of Toronto, and the electrical work by the Canadian Comstock Co. of Toronto.

Boys' Training School, Bowmanville.—Plans and specifications were prepared for a camp dining room building which was constructed at the summer camp by T. E. Flaxman of Bowmanville.

DISTRICTS

The necessary repairs were made to the Court Houses, Gaols, Registry Offices and Land Titles Offices throughout the Province, as needed from time to time; the buildings having been inspected by the officials of the Department and furniture supplied as required.

Kenora.—The new Gaol was completed and is now in occupation. Plans and specifications were prepared to put in repair for a residence for the gaoler the frame house on the grounds.

Nipissing.—The new Gaol at North Bay was completed and is now in occupation.

Sudbury.—The new Gaol at Sudbury was completed during the year and is also now in occupation.

Rainy River.—Plans and specifications were prepared for alterations to the old Registry Office at Fort Frances for the use of the Provincial Police. A group of 3 cells were provided and office space. The work was carried out under contract by J. East & Co. of Fort Frances. The cells were erected by the Canada Wire & Iron Goods Co. of Hamilton.

Miscellaneous.—The Ontario Government Building, 163-164 Strand, London, England, was entirely remodelled, plans and specifications being prepared by Mr. Septimus Warwick, F.R.I.B.A., architect of London, England, and the work carried out under his supervision. The whole of the front was executed in Ontario Limestone from the Quarries at Queenston and was shipped to England in the block and cut to suit on the job. Ontario marble and wood was used for the finishing of the interior of the building. Show rooms are provided and offices for the Commissioner and staff.

Ontario Government Building, Exhibition Park.—About the usual amount of work was done by this Department preparing and installing exhibits, electric lighting and repairs generally.

All of which is respectfully submitted.

I have the honour to be

Sir,

Your obedient servant,

GEO. WHITE,
Assistant Architect.

Toronto, October 31, 1930.

Hon. J. D. Monteith,
Minister of Public Works.

Sir,—

I have the honour to report on the work of the Engineer's Branch of the Department of Public Works for the year ending October 31st, 1930.

The expenditure on this work amounted to $142,746.98 and the expenditure on Maintenance, including the operation of the provincial dredge, amounted to $26,955.64.

During the year, 114 new bridges were constructed: 4 of steel and concrete, 47 of reinforced concrete, 27 of steel beam decks and 36 of timber.

The provincial dredge was engaged during the season on work at the mouth of the Muskoka River, in the river at Bracebridge and at the Port Sandfield cut.

The storage dams on the head waters of the South Branch of the Black River in the Township of Longford, in North Victoria, were completed in March. These dams are located at the outlet of Rainy Lake and at the outlet of Trout Lake. A wing dam was also constructed across a swale south of Trout Lake to prevent the escape of water to the south. The dams are all of concrete construction.

A new concrete dam was also constructed at the outlet of Paudash Lake in the Township of Faraday in North Hastings.

A new dam of rubble masonry construction was built at the outlet of Healey Lake, Lot 36, Concession 2, in the Township of Conger in the southwest corner of the Parry Sound District.

Works constructed at public institutions during the year included a new pipe sewer, 4,600 feet long, extending from the Ontario Hospital at Woodstock, to the sewage disposal plant in the city of Woodstock; a railway siding 350 feet long, extending from the Canadian National Railway to the new power house at the Ontario Hospital, Woodstock; repair and extension of the artesian well at the Ontario Hospital, London; construction of a sewer pipe line 2,800 feet long from the School for the Deaf at Belleville to the city sewage system in the city of Belleville; the erection of a new elevated water tank at the Ontario Agricultural College, Guelph; the construction of a railway siding 1,655 feet long at the Ontario Agricultural College, Guelph; providing a water system, including a well, pipe line, pump and pump house at the Continuation School at Charlton.

The lockmasters' reports on the traffic through the different locks were as follows:

	Steamers	Small Boats	Scows	Rafts
Port Carling Lock..............	1617	1169	421	146
Huntsville "	108	227	...	629
Magnetawan "	407	34	100	451

The Municipal Drainage work in the different districts carried out under the direction of this Department amounted to $27,988.45.

Under the Provincial Aid to Drainage Act, thirteen large drainage schemes were examined and reported, grants to the amount of $61,369.00 were paid to the municipalities initiating the work.

The principal items of expenditure from the fund provided for the maintenance of Public Works was as follows:

MAINTENANCE EXPENDITURE IN 1930

General, tools, repairs to equipment, etc	$2,421 24	
Maintenance and operation of Provincial dredge	9,961 30	
Storehouse at Bracebridge, operation	107 26	
Clearing navigation channels	169 50	
Painting bridges	1,073 18	
		$13,732 48

Repairs and Lighting Locks and Swing Bridges

Port Carling lock and swing bridge	$1,079 21	
Magnetawan lock and swing bridge	800 45	
Huntsville lock and swing bridge	948 88	
Ryerson swing bridge	31 23	
Port Sandfield swing bridge	244 40	
Floating dock at Port Carling	360 45	
		$3,464 62

Repairs to Dams

Bala dam	$104 61	
Baysville dam	8 85	
Deer Lake dam	167 00	
Magnetawan dams	624 28	
Storage dams	60 25	
		$964 99

Repairs to Bridges

Nipissing District

Blanchett Creek bridge, Papineau	$94 50	
Boom Creek bridge	227 38	
Depot Creek bridge, Chisholm	250 00	
Dugas Creek bridge, Ferris	70 01

Whalen Creek bridge, Brudenell	60 00	
		$1,251 50

MUNICIPAL BRIDGES

NIPISSING DISTRICT

Burritt Creek Bridge, Lot 35, Con. "B", Cameron.—A timber bridge, clear span of 12 feet.

Carriere Creek Bridge, Lots 14 and 15, Con. 14, East Ferris.—A timber bridge with a clear span of 12 feet.

Graham Creek Bridge, Lot 27, Con. 3, East Ferris.—A steel beam deck on timber piers with a clear span of 11 feet.

Green Creek Bridge, Lot 29, Cons. 8 and 9, East Ferris.—A 48-inch pipe culvert, 22 feet long.

Moore Creek Bridge, Airy.—A steel beam deck on timber piers. Clear span of 38 feet.

Mooney Creek Bridge, Lot 14, Con. 8, Papineau.—A timber bridge with a clear span of 8 feet.

Warbrick Creek Bridge, Con. 7, Himsworth-East Ferris Townline.—A timber bridge with a clear span of 10 feet.

Wassa Creek Bridge, Lot 7, Con. 4, Chisholm.—A timber bridge with a clear span of 10 feet.

Wassa Creek Bridge, Lot 13, Con. 17, Chisholm.—A steel beam deck on timber piers. Two spans, one span 29 feet in clear width and one 15 feet in clear width. Roadway 14 feet clear.

All work in this district was done under the direction of J. O. Rochefort, road inspector.

PARRY SOUND DISTRICT

Bear Lake Bridge, Lot 8, Con. 11, Monteith.—A timber bridge with a clear span of 20 feet and 16 feet roadway. J. R. Harrop, foreman.

Bear Creek Bridge, Con 12, Nipissing.—A timber bridge, clear span 16 feet and roadway 16 feet. J. R. Harrop, foreman.

Cashman Creek Bridge, Lot 20, Con. 2, Proudfoot.—A steel beam deck on timber abutments. Clear span of 23 feet and roadway 16 feet. Six lines of 15-inch I beams at 42 pounds per foot support a 3-inch plank floor. J. R. Harrop, foreman.

Eleventh Concession Bridge at Lot 6, Joly.—A steel beam deck on timber abutments. Clear span of 18 feet and roadway 16 feet. Six lines of 12-inch I beams at 31-8/10 pounds carry a 3-inch plank floor. J. R. Harrop, foreman.

Fifth Sideline Bridge, South Himsworth.—A timber bridge with a clear span of 20 feet. Roadway 16 feet. D. Mitchell, foreman.

Hicks Bridge, Lot 25, Con. 7, Chapman.—A steel beam deck on timber abutments. Clear span of 38 feet and roadway 16 feet. Two lines of 26-inch I beams at 91 pounds; two 18-inch floor beams and 4 lines of 9-inch steel stringers carry a 3-inch plank floor. J. R. Harrop, foreman.

Jacks Lake Bridge, Lot 23, Con. 11, Armour.—A concrete beam bridge with a clear span of 23 feet and roadway 16 feet. J. R. Harrop, foreman.

Mahon Bridge, Lot 5, Con. 9, Humphrey.—A concrete beam bridge with a clear span of 20 feet and roadway 16 feet clear. T. J. Paget, foreman.

McCoy's Bridge, Lot 16, Con. 1, McDougall.—A steel trestle, 96 feet long, consisting of 3 spans of 32 feet each. The deck consists of two lines of 24-inch girders, floor beams of 18-inch I beams and 4 lines of 9-inch framed-in stringers. The deck is supported in the middle by 2 steel bents of 8-inch H sections 20 feet long, braced each way. The steel posts rest on concrete pedestals. The railing consists of T section posts, carrying 2 lines of half-inch cable on each side of the bridge. The floor is of 3-inch pine plank treated with zinc chloride. T. J. Paget, foreman.

Middle River Bridge, Lot 21, Con. 21, McKellar.—A concrete beam bridge with a clear span of 40 feet and roadway 16 feet clear. Each abutment consists of 4 concrete piles 30 feet long. The beams and curtain wall rest directly on the heads of the piles. Rock fills are placed at each abutment, the stone falling to a natural slope around the piles. T. J. Paget, foreman.

White Oak Creek Bridge, Lot 4, Con. 6, Humphrey.—A concrete beam trestle 61 feet in length with roadway 16 feet in clear width. The bridge has a centre span of 25 feet clear with 2 end spans of 15 feet each. The deck is supported by 4 bents of concrete piles 30 feet long. Rock fills at the ends fall to a natural slope supporting the approach fills. T. J. Paget, foreman.

MUSKOKA DISTRICT

Beaver Creek Bridge, Lot 5, Con. 6, Monck.—A steel beam deck on timber abutments, clear span 18 feet and roadway 14 feet clear.

Beaver Creek Bridge, Lots 11 and 12, Con. 4, Monck.—A concrete bridge with a clear span of 10 feet. Roadway 16 feet clear.

Birkendale Bridge, Lot 4, Con. 4, Franklin.—A concrete culvert with a clear span of 8 feet, height 5 feet, length 35 feet.

Cameron Creek Bridge, Lot 28, Con. 14, Oakley.—A steel beam deck bridge, timber abutments with a clear span of 15 feet and roadway 16 feet clear.

Duck Chute Bridge, Lot 17, Con. 9, Macaulay.—A steel beam deck on timber abutments with a clear span of 25 feet and roadway 14 feet clear.

Dwight Bridge, Lot 6, Con. 6, Franklin.—A two span bridge, one 30 feet and one 18 feet clear. A steel beam deck on concrete abutments and a centre pier of concrete. The floor is a concrete slab. Roadway 16 feet clear.

Eight Concession Bridge, Lot 18, McLean.—A concrete bridge with a clear span of 10 feet and roadway 16 feet clear.

Etwell Bridge, Lot 25, 7th Line, Stisted.—A steel beam deck on timber abutments with a clear span of 25 feet and roadway 14 feet clear.

Ferndale Bridge, Medora.—A 48-inch metal pipe culvert, 30 feet in length.

Fowler Creek Bridge, Lots 30 and 31, Con. 1, Medora.—A 48-inch metal pipe culvert, 34 feet in length.

Gooseneck Bridge, Lots 2 and 3, Con. 4, Franklin.—A steel beam deck on timber abutments with a clear span of 27 feet and roadway 16 feet clear.

Huntsville Lock Swing Bridge.—This work consisted of placing a new steel deck on the swing bridge over the canal at the Cottrill Mill at Huntsville Locks. The old swinging gear was retained. The new deck is 40 feet in length and 11 feet 6 inches in clear width. It comprises two lines of 24-inch steel I beam girders; 15-inch floor beams and two lines of framed-in 9-inch floor stringers. The channel arm is 33 feet 4 inches in length and the shore arm 18 feet in length.

Johnson Creek Bridge, Lots 22 and 23, Con. 1, Oakley.—A steel beam deck on timber abutments with a clear span of 25 feet and roadway 14 feet clear.

Johnson Creek Culvert, Oakley.—A 48-inch metal pipe culvert, 32 feet in length.

Menominee Creek Bridge, Lot 19, Con. 1, Brunel.—A steel beam deck on timber abutments with clear span 20 feet and roadway 16 feet clear.

McGregor Hill Bridge, Lot 6, Con. 13, Wood.—A 48-inch metal pipe culvert, 28 feet in length.

Mortimer Point Culvert, Lot 30, Con. 2, Medora.—A 48-inch metal pipe culvert, 34 feet in length.

Mulveney Bridge, Lot 21, Con. 9, Stephenson.—A steel beam deck on old stone abutments, clear span 19 feet 9 inches and roadway 16 feet clear.

Seventh Line Bridge, Macaulay.—A concrete culvert, width 6 feet and height 6 feet, length 30 feet.

Tenth Concession Bridge, Lot 18, McLean.—A steel beam deck on timber abutments, span 14 feet clear, roadway 14 feet clear.

Rostrevor Bridge, Watt.—The old 70-foot steel span from the South Branch bridge at Bracebridge was moved to Rostrevor and erected over a creek on timber pile abutments. A new plank floor was placed on the bridge.

All bridge work in Muskoka was done under the direction of Wm. Lowe, supervising foreman.

CENTRE SIMCOE DISTRICT

Sixth Line Bridge, Lot 6, Con. 6, Vespra.—A steel beam deck on timber abutments, span 20 feet clear, roadway 16 feet clear.

VICTORIA AND HALIBURTON DISTRICT

Beaver Creek Bridge, Lot 10, Con. A, Minden.—A concrete bridge with a clear span of 16 feet, roadway 16 feet clear. Jos. Shaw, foreman.

Burnt River Bridge, Lot 23, Con. 7, Monmouth.—A concrete beam bridge with a clear span of 25 feet and a roadway 16 feet in clear width. The bridge was placed at a new site on a diversion of the road. P. R. Switzer, foreman.

Coboconk-Dorset Road Bridges.—This work consisted of placing a number of metal pipe culverts in water courses crossing the road. L. A. Pritchard, foreman.

Dark Lake Bridge, Lot 1, Con. 22, Cardiff.—A concrete beam bridge with a clear span of 16 feet and a roadway 16 feet in clear width. P. R. Switzer, foreman.

Devil's Creek Bridge, Lot 17, Con. 11, Lutterworth.—A timber bridge, span 20 feet, roadway 16 feet. L. A. Pritchard, foreman.

Dutch Line Bridge, Lot 1, Con. 6, Snowdon.—A concrete bridge with a clear span of 12 feet and roadway 16 feet in clear width. Jos. Shaw, foreman.

Eighth Concession Bridge, Lot 1, Eldon.—A concrete bridge with a clear span of 8 feet and roadway 16 feet. Jos. Shaw, foreman.

Fifth Concession Bridge, Lots 5 and 6, Carden.—A concrete bridge, clear span 12 feet and roadway 16 feet. Jos. Shaw, foreman.

Eleventh Concession Bridge, Mink Creek, Cardiff.—A concrete bridge with a clear span of 18 feet and roadway 16 feet clear. P. R. Switzer, foreman.

Maple Lake Bridge, Stanhope.—A concrete bridge with a clear span of 12 feet and roadway 16 feet clear. The concrete rests on a grillage of heavy timber extending across and below the stream. Jos. Shaw, foreman.

Mink Creek Bridge, Lot 30, Con. 10, Cardiff.—A concrete bridge with a clear span of 18 feet and roadway 16 feet. P. R. Switzer, foreman.

Minden-Gelert Road Bridge, Snowdon.—A six-foot metal pipe culvert, 18 feet in length. Jos. Shaw, foreman.

Other Lake Bridge, Lots 20 and 21, Con. 22, Monmouth.—The old timber bridge at this point had five short spans. The present work consisted of filling four of the spans with rock and repairing the remaining timber span. P. R. Switzer, foreman.

Paudash Lake Bridge, Lot 23, Con. 8, Cardiff.—A bridge and fill across the Narrows of Paudash Lake. The bridge is a steel span 60 feet long centre to centre of bearings, supplied by the Hamilton Bridge Co. The north shore abutment is concrete. The river pier consists of a concrete pier resting on a stone filled crib. The crib is built up to low water level. A rock-filled causeway extends from the river pier to the south shore. A concrete floor has been placed on the bridge. P. R. Switzer, foreman.

Redstone Lake Bridge, Lot 20, Con. 6, Guilford.—A timber bridge with a clear span of 20 feet and roadway 14 feet. L. A. Pritchard, foreman.

Sixth Concession Bridge at Lot 6, Carden.—A concrete bridge with a clear span of 20 feet and roadway 16 feet clear. Jos. Shaw, foreman.

North Hastings District

Boundary Bridge, Trunk Road, Lot 17, Con. 16, Mayo.—Two lines of 36-inch metal pipe, 24 feet in length.

Blakeley Bridge, Lot 5, Con. 9, Madoc.—A concrete bridge with a clear span of 12 feet and roadway 16 feet clear.

Bronson Bridge, Lot 9, Con. 9, Mayo.—A concrete bridge with a clear span of 10 feet and a roadway 16 feet clear.

Malone Bridge, Lot 26, Con. 1, Marmora.—A concrete bridge with a clear span of 12 feet and roadway 16 feet clear.

McGarry Creek Bridge, Lot 8, Con. 10, Herschel.—A timber bridge with a clear span of 24 feet and roadway 16 feet clear.

McGrath Bridge, Lots 13 and 14, Con. 3, Marmora.—A concrete bridge with a clear span of 8 feet and roadway 16 feet clear.

McKenzie Bridge, Lot 10, 4th Line, Madoc.—A concrete bridge with a clear span of 10 feet and roadway 16 feet clear.

Ninth Concession Bridge at Lot 26, Limerick.—A timber bridge with a clear span of 20 feet and roadway 16 feet clear.

O'Brien Bridge, Lot 12, Con. 1, Wollaston.—A timber bridge with a clear span of 12 feet and roadway 16 feet clear.

Papineau Creek Bridge, Lot 11, Con. 1, Wollaston.—A concrete bridge with a clear span of 40 feet and roadway 16 feet clear.

Pack's Bridge, Lots 15 and 16, Con. 5, Marmora.—A concrete culvert 6 feet wide and 5 feet high, inside measurement. Length 18 feet.

Trout Creek Bridge, Lot 8, Con. 16, Faraday.—A concrete bridge with a clear span of 16 feet and roadway 14 feet clear.

Thompson Bridge, Papineau Creek, Monteagle-Wicklow Townline.—A timber bridge with a clear span of 12 feet and roadway 16 feet clear.

White Bridge, Lot 25, Con. 4, Madoc.—A concrete bridge with a clear span of 12 feet and roadway 16 feet clear.

All the bridge work in North Hastings was done under the direction of W. E. Wiggins, road inspector for the District.

East Hastings District

Dean's Bridge, Lot 12, Con. 14, Huntingdon.—A concrete bridge with a clear span of 14 feet and roadway 16 feet clear.

Fuller Bridge, Lot 10, Con. 4 and 5, Huntingdon.—A concrete bridge with a clear span of 20 feet and roadway 16 feet clear.

Kennedy Bridge, Lot 6, Con. 4, Hungerford.—A concrete bridge with a clear span of 20 feet and roadway 16 feet clear.

Rocky Altar Bridge, Lot 23, Con. 8, Hungerford.—A concrete bridge with a clear span of 35 feet and roadway 16 feet clear.

This work was all done under the direction of W. E. Wiggins, road inspector.

ADDINGTON FRONTENAC DISTRICT

Beaver Creek Bridge, Lot 26, Con. 10, Kaladar.—A concrete bridge with a clear span of 20 feet and a roadway 16 feet clear.

Desert Lake Bridge, Lot 7, Con. 14, Loughborough.—A steel beam deck on timber abutments, with a clear span of 16 feet and roadway 16 feet clear.

Desert Lake Bridge, Lot 5, Con. 13, Loughborough.—A steel beam deck on concrete abutments with a clear span of 20 feet and roadway 16 feet clear. The bridge has a concrete floor.

Eagle Creek Bridge, Lot 24, Con. 1 and 2, Bedford.—A concrete bridge with a clear span of 10 feet and roadway 16 feet clear.

Flinton Bridge, Lot 23, Con. 4, Kaladar.—A concrete bridge with a clear span of 38 feet and roadway 14 feet clear.

Green Bay Bridge, Lot 1, Con. 16, Bedford.—A concrete bridge with a clear span of 10 feet and roadway 16 feet clear. An extensive fill was placed at each end of the bridge.

Gull River Bridge, Lot 21, Con. 10, Sheffield.—A concrete bridge with a clear span of 12 feet and roadway 16 feet clear.

Long Lake Bridge, Lot 25, Con. 5, Barrie.—A timber bridge with a clear span of 20 feet and roadway 16 feet clear.

Mississippi Bridge, Lot 31, Con. 10, Barrie.—A steel beam deck on timber abutments with a clear span of 30 feet and roadway 14 feet clear.

Muskrat Creek Bridge, Lot 21, Cons. 1 and 2, Bedford.—A concrete bridge with a clear span of 10 feet and roadway 16 feet clear.

Otter Lake Bridge, Lot 10, Con. 12, Loughborough.—A steel beam deck on timber abutments with a clear span of 25 feet and roadway 14 feet clear.

Sees Bridge, Lot 7, Con. 6, Kennebec.—A concrete bridge with a clear span of 12 feet and roadway 16 feet clear.

All the bridge work in this district was done under the direction of W. W. Pringle, road inspector.

SOUTH RENFREW DISTRICT

Baines Bridge, Moore's Creek, Admaston.—A concrete bridge with a clear span of 20 feet and roadway 16 feet clear.

Bagot Creek Bridge, Lot 17, Con. 3, Bagot.—A steel beam deck on timber abutments and roadway 16 feet clear.

Brennan Creek Bridge, Lot 9, Con. 2, Hagarty.—A concrete bridge with a clear span of 16 feet and roadway 16 feet clear.

Buttler's Bridge, Bonnechere River at Lots 6 and 7, Admaston.—This is a timber bridge, 118 feet long, rebuilt by the Township of Admaston. The Department paid a grant of $800.00 to the township on the completion of the work.

Byers Creek Bridge, Lots 20 and 21, Cons. 12 and 13, Hagerty.—A timber bridge with a clear span of 11 feet and roadway 16 feet clear.

Carson Lake Bridge, Lot 35, Con. 9, Sherwood.—A steel beam deck on timber abutments with a clear span of 20 feet and roadway 16 feet clear.

Diamond Lake Bridge, Lot 24, Con. 8, Radcliffe.—A timber bridge with a clear span of 18 feet and roadway 16 feet clear.

First Concession Bridge at Lot 14, Raglan.—A timber bridge with a clear span of 6 feet and roadway 16 feet clear.

Green Creek Bridge, Lot 4, Con. 3, Hagarty.—A timber bridge with a clear span of 20 feet and roadway 16 feet clear.

Legris Bridge, Lot 26, S.R., Brougham.—A timber deck on stone abutments. Clear span of 10 feet with 16 feet clear roadway.

Little Madawaska Bridge, Lot 20, Con. 10, Sherwood.—A timber bridge with a clear span of 22 feet and roadway 16 feet clear.

Long Lake Bridge, Lot 8, Con. 16, Radcliffe.—A steel beam deck on timber abutments, clear span of 36 feet and roadway 16 feet clear.

Mahood's Bridge, Lots 25 and 26, Con. 6, Hagarty.—A 6-foot by 6-foot concrete culvert, 43 feet long.

Murphy Creek Bridge, Lot 11, Con. 17, Brougham.—A timber deck on stone abutments, clear span of 6 feet and roadway 16 feet clear.

Plaunt Mountain Bridge, Sebastopol.—Two small bridges with cedar decks on stone abutments. Span 6 feet clear and roadway 16 feet in clear width.

Rockingham Creek Bridge, Lot 32, Con. 11, Brudenell.—A timber bridge with a clear span of 22 feet and roadway 16 feet clear.

Trokes Bridge, Matawatchan Village.—A cedar box culvert, 18 feet in length, size 3 feet by 6 feet.

Twelfth Concession Bridge at Lot 23, Raglan.—A timber bridge, clear span of 12 feet and roadway 16 feet clear.

Youst Creek Bridge, Lot 32, Con. 18, Raglan.—A timber bridge with a clear span of 22 feet and roadway 16 feet clear.

White Lake Creek Bridge, Lot 30, Con. 13, Raglan.—A timber bridge with a clear span of 16 feet and roadway 16 feet clear.

A number of metal pipe culverts were supplied and placed on different roads in this District to replace worn-out culverts. The pipe culverts installed were as follows:

Ashdod Shamrock Road	2	culverts
Barry's Bay-Combermere Road	7	"
Brudenell-Paymont Road	1	"
Combermere-Palmer's Rapids Road	11	"
Connors Creek, Bagot	1	"
Dacre-Caldwell Road	3	"
Dohl's Creek, Brougham	1	"
Fifteenth Concession, Raglan	1	"
Griffith's Road	3	"
Harrington Creek, Hagarty	1	"
Opeongo Road	5	"
Perault Creek, Bagot	1	"
Sixteenth Concession, lot 21, Raglan	1	"
" " " 25, "	1	"
Springtown-Calabogie Road	3	"
Wilno-Barry's Bay Road	1	"

All the bridge work in South Renfrew was done under the direction of W. C. Millar, road inspector for the district.

North Renfrew District

Bennett Creek Bridge, Carr Line at Lot 25, Ross.—A concrete bridge with a clear span of 14 feet and roadway 18 feet in clear width.

Cliche Bridge, Indian River, Alice.—A steel beam bridge on timber piers and abutments. The structure has 3 spans. The centre span is 26 feet clear and each of the 2 end spans is 18 feet clear. The roadway width is 14 feet clear.

Harrington Creek Bridge, Lot 21, Con. 7, South Algona.—A timber bridge with a clear span of 12 feet and roadway 15 feet clear.

Snake Creek Bridge, Lot 4, Con. 17, Wilberforce.—A two-span timber bridge on timber piers. Each span is 22½ feet in clear width and is supported with a king truss. The roadway is 14 feet in clear width.

Snake River Bridge, Lots 22 and 23, Con. 5, Bromley.—A concrete beam bridge with a clear span of 25 feet and roadway 16 feet clear. All the bridge work in North Renfrew was done under the direction of W. C. Millar, road inspector for the district.

STORAGE DAMS

Healey Lake Dam.—This dam was constructed at the outlet of Healey Lake, on Lot 36, Con. 2, in Conger Township in the Parry Sound District. The main dam has a length of 44 feet, an 8-foot sluice, two 4-foot piers and 2 wings of 14 feet each. The piers are 7 feet in height and 14 feet long, battered 1 in 3 on the down-stream end. The wings are 3 feet wide on top, battered 1 in 6 on the up-stream face and 1 in 3 on the down-stream face. The sluiceway is 7 feet in depth to the sill. Stop logs are provided to control a head of water 5 feet in depth above the sill. The deck consists of 8 by 8 beams and 3-inch plank. A wing dam 65 feet long and 4 feet high is constructed across a back channel adjoining the main dam. Both dams are constructed of rubble masonry set in cement mortar. T. J. Paget was foreman in charge.

Raven Lake Dam.—This dam is located at the outlet of Raven Lake on Lot 1, Con. 6, Sherbourne. It is built of concrete. It replaces an old wooden dam and is of the same height as the old dam. The dam is 180 feet long and consists of a sluice way 10 feet wide, 2 piers each 4 feet wide. The north wing is 50 feet long and the south wing is 112 feet long. The piers are 4 feet wide, 15 feet long on top and battered 1 in 3 on the down-stream end. The wings are 3 feet wide on top and battered 1 in 6 on the up-stream face and 1 in 3 on the down-stream face. The dam is built to control a head of water 12 feet above the sill level.

Rainy Lake Dam.—This dam is on the head waters of the South Branch of Black River. It is located at the outlet of Rainy Lake on Lot 1, Con. 7, Longford. The dam is built in a narrow gorge. The overall length is 36 feet. The sluice way is 10 feet wide, two piers 4 feet wide and two wings each 9 feet long. The dam is constructed to hold a head of 13 feet of water above the sill level. The dam is built of concrete.

Trout Lake Dams.—This dam is built at the outlet of Trout Lake on Lot 7, Con. 5, Longford. It is built to the same height as the old timber dam it replaces and controls the same head of water. It is 76 feet long and has a sluice way 10 feet wide, two piers 4 feet wide and two wings with a combined length of 58 feet. It is built to control a head of water 10 feet above sill level. The wing dam is constructed across a depression on the west shore of the lake. It is 125 feet long and is 12 feet in height at the centre. Both dams are constructed of concrete. The Black River Dams were constructed under the direction of Wm. Lowe, a supervising foreman for the Public Works Department.

PUBLIC INSTITUTIONS

Sanitary Sewer, Ontario School for the Deaf, Belleville.—Heretofore, the sewage from this institution was treated in a septic tank and the effluent discharged into Lake Ontario. The city of Belleville complained that this sewage contaminated the city water supply. To remedy this complaint, it was decided that the sanitary sewage be connected with the city sewer system. A new pump house and well were provided at the institution and all sanitary sewers were discharged into the well. From this well a 6-inch cast iron pipe was laid along the south side of the King's Highway No. 2, a distance of 2800 feet, connecting with the City sewer about 500 feet east of the west limit of the City. The sewage is forced from the pump house well through the 6-inch sewer by a submerged vertical centrifugal pump supplied by the Smart-Turner Co. of Hamilton.

The storm sewers from the institution discharge through the old outlet directly into the lake.

Railway Siding, Ontario Agricultural College, Guelph.—When the new power house was constructed at the Ontario Agricultural College, an extension of the railway siding became necessary. The old siding was extended east and south 1,500 feet. The first 700 feet of the siding has a grade of 5 per cent. and the balance of 800 feet is on a level grade. The rails and electric equipment were supplied and placed by the Ontario Hydro-Electric Power Commission.

Railway Siding at the Ontario Hospital, Woodstock.—A new siding was supplied to the new power house at this institution. This siding branches from the Woodstock-Tavistock branch of the Canadian National Railway. The siding is 501 feet long.

Sanitary Sewer, Ontario Hospital, Woodstock.—Heretofore the sanitary sewage from the Ontario Hospital at Woodstock was passed through a septic tank and discharged into covered tile system on the hospital property. A nuisance developed and it was decided to connect the hospital sanitary sewer system with the sewer system of the city of Woodstock. A pump house and well were constructed at the new power plant. The sanitary sewage from the institution is now discharged into this well. A submerged centrifugal pump purchased from Smart-Turner, of Hamilton, discharges the sewage into a 6-inch cast-iron main. This main extends south a distance of 400 feet to the right-of-way of the Canadian National Railway. Thence south, near and along the west limit of the railway right-of-way, 1,950 feet to Tecumseh Street in the city of Woodstock. Thence southerly along Tecumseh Street, 1,650 feet to Admiral Road. Thence westerly along Admiral Road 545 feet to the sewage treatment plant operated by the city of Woodstock. Arrangements have been made with the city of Woodstock for the treatment and disposal of the Hospital sewage. The total length of the sewer pipe is 4,545 feet.

MUNICIPAL DRAINAGE

From the fund provided for Municipal Drainage, drains were constructed in the following districts:

In the district of	Nipissing	58	drains were	constructed
" "	Parry Sound	17	"	"
" "	Muskoka	16	"	"
" "	East Simcoe	35	"	"
" "	Centre Simcoe	1	"	"
" "	North Bruce	1	"	"
" "	North Ontario	19	"	"
" "	Victoria and Haliburton	21	"	"
" "	Peterborough	1	"	"
" "	North Hastings	9	"	"
" "	Addington	6	"	"
" "	Renfrew	17	"	"

$27,988.45 was expended on this work.

DRAINAGE AID

AUX SABLES AND PETE SEEBE DRAIN, McGILLIVRAY TOWNSHIP, NORTH MIDDLESEX

This drainage work was constructed by the Township of McGillivray under the provisions of the Municipal Drainage Act and in accordance with plans, etc., prepared by Geo. A. McCubbin, O.L.S. and C.E. The engineer's report was adopted on January 14th, 1929, and the petition for aid was filed in this Department on September 30th, 1929.

The work starts on the Pete Seebe or Mud Creek Drain near the centre of Lot 9 in the 28th Concession of McGillivray and extends north-west along the Pete Seebe a distance of 5,900 feet to the Devil's Elbow, where it enters the Aux Sables River. Thence it extends north along the Aux Sables River a distance of 9,600 feet to the McGillivray-Stephen boundary, from which point the river has lately been improved to Lake Huron. The drain has a bottom width of 30 feet at the head and gradually widens to 40 feet at the outlet. The depth of cut varies from 6½ feet to 11 feet 3 inches. The side slopes are one-to-one throughout.

The estimated cost of the work was $31,000 which amount was assessed by the engineer on the lands and roads affected, as follows:

On lands and roads in McGillivray	$15,281 50
" " Bosanquet	3,088 00
" " West Williams	6,895 00
" " Stephen	2,727 50
" " East Williams	2,626 50
" " Hay	256 00
" " Parkhill	125 00

The township treasurer reports the cost of the work under the authority of by-law No. 4 of 1929 at $30,864.52. Included in this is an item of $460.00 for interest paid on advances which should be eliminated, leaving the cost of the work $30,404.52.

I examined the drain on April 23rd, 1930, and found the work completed in a very satisfactory manner. This drain is a trunk channel and is entitled to aid.

On report, a grant of $6,080.00, being 20% of the legitimate cost of the work, was paid to the Township of McGillivray, the initiating municipality.

BIG MARSH DRAINAGE SYSTEM, PELEE ISLAND, SOUTH ESSEX

This work was carried out by the Township of Pelee Island under the provisions of the Municipal Drainage Act and in accordance with plans prepared by Orville Rolfson, O.L.S. and C.E. The engineer's report was adopted on November 4th, 1929, and the petition for provincial aid was filed in this Department on July 4th, 1930.

The assessed area of the island is 9,965 acres. Of this area about 5,000 acres are low-lying marsh land usually submerged. Surrounding the marsh land is an area of about 1,500 acres on a higher level, but too low to admit of drainage by gravity. To accomplish the drainage of the marsh and other low lands, embankments were built up along and near the lake shore on the west, north and east sides of the marsh. A system of large internal drains was constructed to carry the drainage of the lands to pumps placed on the west and north shores. Effective drainage is accomplished by pumping. The original work was done about 1887.

This drainage has proven very expensive. The marsh lands are now paying in municipal and drainage taxes as high as $740.00 per year on 100 acre farms. Tbe present work will add 34c per acre to this charge.

The artificial banks are built at a distance of about 100 feet from the high sand banks built up along the lake shore. In times of low or normal lake levels, this sand bank affords protection from flooding from the lake. But in time of high lake levels as was experienced in 1929 and the Spring of 1930, the sand banks are liable to be carried away. The artificial bank would then be the only protection. During the Winter and Spring of 1930, the farmers worked for months to save the west beach from overflowing. It was discovered that a large section of the artificial bank was from 1 to 6 feet below the lake level. If the water broke through the sand bank, all the low land in the system would be flooded. Hence the present scheme was launched.

The work consists of building up two sections of the east embankment. The northerly section is 7,500 feet in length and the southerly section 5,375 feet in length. The bank as constructed is 3 feet above high water level and 5 feet 9 inches above the normal level of Lake Erie. The top width of the bank is 12 feet with a 2 to 1 slope on the lake side and a slope of 1½ to 1 on the west side. The work was done with a drag-line excavator. Another part of the work was deepening about 2,000 feet of the canal leading to the west pump house, to allow the water to reach the pump more freely. The estimated cost of the work was $23,460.00 of which amount $20,341.70 was assessed against the land affected and $3,118.30 against the township for benefit to roads. I examined the work on August 22nd of this year and found it completed in a very satisfactory manner.

This system is a drainage work accomplished through embankments and pumping, as described in subsection "b" of section 2 of the Provincial Aid to Drainage Act and is entitled to aid. The township treasurer reports the total cost of the work at $25,289.31.

On report, a grant of $5,057.00, being 20% of the cost of the work, was paid to the Township of Pelee Island.

BLACK CREEK DRAIN, HAY TOWNSHIP, SOUTH HURON COUNTY

This drain was constructed by the Township of Hay under the provisions of the Municpal Drainage Act and in accordance with plans prepared by T. R. Patterson, Civil Engineer. The engineer's report was adopted on April 2nd, 1928, and the petition for aid was filed in this Department on March 16th, 1929.

The drain consists of a main trunk channel and a branch which is also a trunk channel. The main drain starts at the Zurich line, (the side road between Lots 20 and 21) at the Centre Line of the 5th Concession and runs southerly through the 5th and 6th Concessions to the Stephen Townline. Thence it extends southerly into Stephen about one mile, discharging into the Aux Sables River. Log jams were removed from the Aux Sables River for a distance of one mile below the junction. The west branch of the drain also starts at the Zurich Line and runs south through the 7th Concession to the south limit of Lot 13. Thence south-east to the main drain, which it joins on Lot No. 9 in the 6th Concession. The length of this branch is 17,000 feet and the length of the main drain is 34,600 feet or a combined length of 9¾ miles.

The main drain has a bottom width of 6 feet at the head and gradually widens out to 24 feet bottom width at the outlet. The depth of cut varies from 4 to 10 feet with side slopes of 1 to 1. The branch drain has a bottom width of 4 feet at the head and widens out to 6 feet at the lower end. The depth of cut varies from 4 to 8 feet and the side slopes are 1 to 1 throughout. The estimated cost of the work was $32,102.40 which was assessed by the engineer as follows:

On lands and roads in Township of Hay	$24,170 10
" " " Stephen	270 00
" " " Stanley	139 00
" " " Usborne	2,490 80
" " " Tuckersmith	2,796 00
" " " Hibbert	339 00
" " Village of Hensall	1,279 50
" " " County of Huron	493 00
" of the Canadian National Railways	125 00

The treasurer of the township reports the total cost of the work at $24,840.80. I examined the drain on September 25th, 1930, and found the work completed in a satisfactory manner.

On report, a grant of $4,968.00, being 20% of the legitimate cost of the work, was paid to the Township of Hay, the initiating municipality.

Black Creek Drain, Winchester Township, Dundas County

This drain was constructed by the Township of Winchester under the provisions of the Municipal Drainage Act and in accordance with plans, etc., prepared by D. H. Weir, O.L.S. and C.E.

The engineer's report was adopted on August 2nd, 1926, and the petition for aid was filed in this Department on August 3rd, 1927.

The drain commences at the west side of the east quarter of Lot 9 in the 6th Concession of Winchester and extends east on the Centre Line of the 6th Concession to the Centre Line of Lot 10. Thence north to the north side of the road in front of Concession 7. Thence east to the east Line of Lot 10. Thence north 3,045 feet. Thence east to the east side of Lot 11, where it joins the natural water course. Thence along the water course in a northerly direction to the Castore River which it joins in the northerly part of lot 12 in the 14th Concession. The total length of the drain is 40,602 feet.

The drain has a bottom width of 3 feet at the head and gradually widens out to 7 feet at the outlet. The depth of cut varies from 2 feet to 10½ feet, and the side slopes are 1¼ to 1 throughout. The estimated cost of the work was $10,831.30, which was assessed by the engineer against lands and roads in Winchester, in which the entire drainage basin lies. The total cost of the drain as authorized by by-law 480 and certified by the township treasurer, was $12,305.59.

I examined the drain on May 15th, 1930, and found the work completed in a satisfactory manner. This drain is a trunk channel within the meaning of the Provincial Aid to Drainage Act and is entitled to aid.

On report, a grant of $2,461.00, being 20% of the cost of the work, was paid to the Township of Winchester.

Cassidy Drain, Osgoode Township, Carleton County

This drain was constructed by the Township of Osgoode under the provisions of the Municipal Drainage Act and in accordance with plans prepared by W. H. Magwood, Civil Engineer. The engineer's report was adopted on September 5th, 1927, and the petition for aid was filed in this Department on January 4th, 1928.

The drain commences at the north limit of Lot No. 12 in the 7th Concession and runs south-easterly through Lots 12, 13 and part of 14 to the west side of the 8th Concession Road. Thence south along the west side of the road to a watercourse at the north limit of Lot 16. Thence it follows the watercourse west, south and east, again striking the 8th Concession road at Lot 19. Thence south along the west side of the road to the south part of Lot 20, where it again enters the watercourse. Thence south-west along the watercourse to a sufficient outlet which is reached near the south limit of Lot 21. The length of the drain is 17,100 feet. The drain has a bottom width of 3 feet at the head and widens to 4 feet bottom width at the outlet. The depth of cut varies from 3 to 8 feet and the side slopes are 1¼ to 1 throughout. The drainage area comprises some 3,914 acres, of which 1,100 acres may be classed as swamp.

A branch drain known as the Graham branch extending easterly through the 8th Concession, was constructed in connection with the main drain. The cost of this branch is not included in the amount on which the grant is based.

The estimated cost of the work was $15,000, which was assessed on lands and roads in Osgoode. I examined the drain on August 9th and found the work completed in a satisfactory manner.

The township treasurer reports the cost of the work at $17,088.16, but included in this is the cost of the Graham branch, $3,292.40 and items of bank interest amounting to $379.31, making a total of $3,671.71, which must be deducted, leaving $13,416.45 as the legitimate cost of the trunk channel.

On report, a grant of $2,683.00, being 20% of the legitimate cost of the work, was paid to the Township of Osgoode.

GEO. ALDRICH MUNICIPAL DRAIN, HOWICK TOWNSHIP, NORTH HURON COUNTY

This drain was constructed by the Township of Howick under the provisions of the Municipal Drainage Act and in accordance with plans prepared by F. A. Edgar, Civil Engineer. The engineer's report was adopted by the Municipal Council of Howick on April 19th, 1928, and the petition for aid was filed in this Department on September 4th, 1928.

This drainage work consists of a main trunk channel, one branch trunk channel and eight branch or lateral drains, all of which are tile or covered drains. The upper end of the main drain which is situated in the Township of Wallace, is a tile drain and is not included in the trunk channel. This section of the drain is 5,508 feet long. The main trunk channel commences at the north side of the Howick-Wallace Townline at the front of Lot 28 in the First Concession of Howick and extends northerly and westerly through Howick, discharging into the Maitland River at the south-west corner of Lot 22 in the 6th Concession of Howick. The length of this trunk channel is 24,272 feet. The drain at the head has a bottom width of 3 feet 6 inches, which gradually widens to 8 feet at the outlet. The depth of cut varies greatly, ranging from 2 feet to 7 feet. The side slopes are 1 to 1 throughout. The second trunk channel called the "B" branch, connects with the main drain at the south-west corner of Lot 28 in the 2nd Concession of Howick and extends east 2,050 feet to the side road between Lots 30 and 31. The bottom width of this drain is 3 feet at the head and 3½ feet at the outlet. The depth of cut ranges from 2 to 5 feet and the side slopes are 1 to 1 throughout.

The engineer, in his report, made separate estimates and assessments for the trunk channels and each one of the branches. The estimated cost of the trunk channels, $10,383.20, was assessed as follows:

On lands and roads in Wallace	$ 523 38
" " Howick	10,314 82

The township treasurer reports the actual cost of the trunk channels as $11,256.45. I examined the drain in October, 1929, and found the work completed in a satisfactory manner. This work consists of a trunk channel or channels and is entitled to aid.

On report, a grant of $2,251.00, being 20% of the legitimate cost of the work was paid to the Township of Howick, the initiating municipality.

HAMPTON DRAIN, WESTMINSTER TOWNSHIP, WEST MIDDLESEX COUNTY

This drain was constructed by the Township of Westminster under the provisions of the Municipal Drainage Act and in accordance with plans and specifications prepared by F. W. Farancomb, O.L.S. and C.E. Certain additions were made to the work as originally proposed by order of the Drainage Referee.

The engineer's report was adopted by the Council of Westminster on October 5th, 1926, and the petition for aid was filed in this Department on April 1st, 1927.

The work comprises the repair and improvement of that portion of the original Hampton drain, extending along Dingman Creek to Lot 13 and the deepening, widening and straightening of Dingman Creek to a sufficient outlet. The work commences at the junction of the Hampton drain with Dingman Creek at the centre of Lot 7 in the 3rd Concession of Westminster and extends westerly near and along the channel of Dingman's Creek, a distance of 1,400 rods to Lot 16 in the 4th Concession. From this point westerly a distance of 1,160 rods to the west quarter of Lot 23 in the 4th Concession, the engineer decided that the benefit to the adjoining lands would not warrant the cost of the improvement of the creek channel and in his estimates provided for compensation for flooding to the owners affected. It was necessary to improve a lower section of the drain and work was resumed at the east side of the west quarter of Lot 23 and continued down stream 400 rods. Below this point for a distance of 80 rods, the channel of the creek to a width of 40 feet was cleared of all obstructions, logs, brush and rubbish.

The bottom width of the drain is 20 feet at the head and widens to 24 feet at the outlet. The depth of cut varies from 3 to 8 feet. In the upper portion the old drain was deepened about 2 feet. The side slopes are 1 to 1 throughout.

The estimated cost of the drain was $19,787.00, which was assessed by the engineer as follows:

On lands and roads in North Dorchester	$ 2,463 00
" " Westminster	17,324 00

I examined the drain on September 20th, 1929, and found the work completed in a satisfactory manner. This drain is a trunk channel within the meaning of the Provincial Aid to Drainage Act and is entitled to aid.

The township treasurer reports the full cost of the work as authorized by by-law at $21,413.91. On report, a grant of $4,282.00, being 20% of the legitimate cost of the work was paid to the Township of Westminster, the initiating municipality.

MILLER-LEAKE CREEK DRAIN, CHATHAM TOWNSHIP, WEST KENT COUNTY

This drain was constructed by the Township of Chatham under the provisions of the Municipal Drainage Act and in accordance with the report and plans prepared by W. G. McGeorge, O.L.S. and C.E. The engineer's report was adopted on August 6th, 1928 and the petition for aid was filed in this Department on March 22nd, 1929.

The drain commences at the intersection of the 12 and 13 sideroad with the 5th Concession road and extends north-west along the east side of the road to the centre line of the 5th Concession. Thence north-west along a natural watercourse to a sufficient outlet in Little Bear Creek at the centre line of Lot 8 at the rear of Concession 9. The length of the drain is 1,780 rods. The drain has a bottom width of 3 feet at the head and gradually widens to 12 feet at the outlet. The depth of cut ranges from 3 to 9 feet with side slopes of 1 to 1. The drainage area assessed comprises about 1,900 acres.

I examined the drain on April 24th, 1930 and found the work fully completed in a satisfactory manner. This drain is a trunk channel within the meaning of the Provincial Aid to Drainage Act and is entitled to aid.

The estimated cost of the work according to the engineer's report was $13,200.00. The actual cost of the work as certified by the township treasurer was $12,895.45.

On report, a grant of $2,579.00, being 20% of the legitimate cost of the Miller-Leake Creek drain was paid to the Township of Chatham.

NOTTAWASAGA RIVER DRAIN, TECUMSETH TOWNSHIP, SIMCOE COUNTY

This drain was constructed by the Township of Tecumseth under the provisions of the Municipal Drainage Act and in accordance with plans prepared by U. W. Christie, O.L.S. and C.E. The engineer's report was adopted on April 16th, 1927, and the petition for aid was filed in this Department on April 10th, 1928.

This scheme embraces two trunk channels and eleven lateral drains or branches. The trunk channels are the river proper and the Cresswell Creek section.

The main drain, river section, commences at the north-west corner of the south half of Lot 21 in the 12th Concession of Tecumseth and extends westerly near and along the channel of Nottawasaga River 38,282 feet to the road between Concessions 13 and 14.

The Creswell Creek section commences at the 9th Concession road at the front of Lot 19 and runs north-west along the creek to the main drain at the line between Lots 17 and 18, at the rear of the 11th concession. The length of this section is 5,679 feet. The main drain has a bottom width of 10 feet at the head of the work and gradually widens out to 18 feet at the outlet. The depth of cut ranges from 3 to 17 feet with side slopes of 1 to 1 throughout.

The Creswell Creek section has a bottom width of 5 feet. The depth of cut ranges from 5 to 7½ feet, with side slopes of 1 to 1 throughout.

The estimated cost of the complete drainage scheme, including all the lateral drains and branches, was $44,969.00, which amount was assessed by the engineer as follows:

On lands	and roads	in Township of	Tecumseth	$41,000 30
"	"	"	Essa	338 00
"	"	"	Innisfil	596 00
"	"	"	West Gwillimbury	2,025 00
"	"	"	Adjala	560 00
"	"	Village of	Beeton	350 00
"	"	"	Tottenham	100 00
				$44,969 20

The total expenditure on the complete scheme, as reported by the township treasurer, as authorized by by-law was $48,025.08. The incidental expenses amounted to 8-44/100 per cent. of the cost of construction. The cost of construction on the trunk channels was as follows:

On main drain	$29,659 52
On Creswell Creek section	1,909 00

making a total construction on trunk channels of $31,668.52. Adding to this a proportionate share of the incidental expenses, which amounts to $2,682.32, brings the total cost of the trunk channels on which the grant is based to $34,350.85.

I examined the drain in June, 1929, and found the work completed in a satisfactory manner. This drainage work comprises trunk channels within the meaning of the Provincial Aid to Drainage Act and is entitled to aid.

On report a grant of $6,870.00, being 20% of the legitimate cost of the work was paid to the Township of Tecumseth, the initiating municipality.

THOMPSON-LAMONT-DEYELL DRAIN, TURNBERRY TOWNSHIP, NORTH HURON COUNTY

This drain was constructed by the Township of Turnberry under the provisions of the Municipal Drainage Act. The engineer's report on the work was adopted on July 8th, 1929, and the petition for aid was filed in this Department on August 31st, 1929.

The drain commences on Lot No. 24 in the 10th Concession of Turnberry and extends west and south through a swamp a distance of 23,024 feet, discharging into the Maitland River at Lot 18, Concession B, Turnberry. The drain has a bottom width of 3 feet at the head and widens gradually to 8 feet at the outlet. The depth of cut varies from 3 feet to 9 feet 6 inches. The side slopes are 1 to 1 throughout. A small branch drain Branch "B," 913 feet long, was constructed on the north part of Lot 24, Concession B. The cost of this branch is eliminated from the cost on which the grant is based.

The estimated cost of the drain was $13,799.00 which was assessed by the engineer on the lands and roads affected as follows:

On lands	and roads in	Turnberry	$12,256 20
"	"	Culross	271 20
"	"	Kinloss	928 70
"	"	Wawanosh	342 90

The treasurer of the Township of Turnbury reports that the sum of $15,546.55 was expended on the work. From this must be deducted the sum of $349.00, which, including the proportion of incidental expenses, was expended on branch "B," leaving the cost of the trunk channel $15,197.55.

This work is a trunk channel within the meaning of the Provincial Aid to Drainage Act and is entitled to aid. I examined the drain on September 19th, 1929, and found the work completed in a satisfactory manner.

On report, a grant of $3,039.00, being 20% of the legitimate cost of the work, was paid to the Township of Turnberry, the initiating municipality.

TOULOUSE DRAIN REPAIR, DOVER TOWNSHIP, WEST KENT COUNTY

This drain was constructed by the Township of Dover under the provisions of the Municipal Drainage Act and in accordance with the report of W. G.

McGeorge, O.L.S. and C.E. The petition for aid was filed in this Department on November 23rd, 1927, and the engineer's report was adopted on July 18th, 1927.

This drain commences at the east side of the west quarter of Lot 9 and extends west on the centre line of the 8th Concession, to the middle of the west quarter of Lot 6. Thence westerly along a watercourse to Lake St. Clair at the northeast angle of Lot 1. The length of the drain is 15,700 feet or 3 miles. The drain has a bottom width of 20 feet with side slopes of 1 to 1. The depth of cut ranges from 5 feet to 15½ feet. The new bottom runs from 2 feet 6 inches to 3 feet 10 inches below the old bottom of the drain. The assessments for this work are very heavy, running as high as $5.50 per acre.

The estimated cost of the drain was $16,022.45, which was assessed against lands and roads in Dover.

The treasurer of the township reports the final cost of the drain at $15,212.20.

I examined the drain in June, 1928, and found the work completed in a satisfactory manner. This is a trunk channel within the meaning of the Provincial Aid to Drainage Act and is entitled to aid.

On report, a grant of $3,042.00, being 20% of the legitimate cost of the work, was paid to the Township of Dover.

WALKER DRAIN, GLOUCESTER TOWNSHIP, CARLETON COUNTY

This drain was constructed by the Township of Gloucester, under the provisions of the Municipal Drainage Act and in accordance with plans, etc., prepared by F. E. Patterson, C.E. The engineer's report was adopted on August 21st, 1928, and the petition for aid was filed in this Department on April 28th, 1930.

The drain starts at the centre line of Lot 3 in the 4th Concession of Gloucester and runs south on the west side of the road between Concessions 4 and 5, 250 feet to a watercourse. Thence easterly along the course 7,950 feet to a sufficient outlet. The lower end of the drain for a distance of 1,115 feet is through solid rock. The drain has a bottom width of 4 feet at the head and gradually widens to 6 feet at the outlet. The depth of cut varies from 3½ to 7 feet. The side slopes are 1½ to 1 through the earth sections and ¼ to 1 through the rock section. The estimated cost of the work was $5,126.40, which was assessed against lands and roads in Gloucester.

The total cost of the drain as reported by the treasurer of the township was $10,555.88. The excessive cost resulted from the contractor encountering a large quantity of hardpan, that was not provided for in the engineer's estimate. The contractor brought suit against the Municipality and the Drainage Referee awarded him $2,095.80. Apart from this the cost of the work greatly exceeded the engineer's estimate.

I examined the drain on May 7th, 1930, and found the work completed in a satisfactory manner.

This is a trunk channel within the meaning of the Provincial Aid to Drainage Act and is entitled to aid.

Although the petition for aid was not filed within the statutory limit of time, the municipal officials were not remiss as they did not know until January

3rd, 1930, on which date the drainage referee awarded the contractor extras on his contract, that the cost of the drain was to exceed $10,000.

On report, a grant of $2,110.00, being 20% of the legitimate cost of the work, was paid to the Township of Gloucester.

I have the honour to be,

Sir,

Your obedient servant,

A. J. HALFORD,
Engineer Public Works.

Toronto, October 31st, 1930.

Toronto, February 5th, 1931.

HONOURABLE J. D. MONTEITH, M.D.,
Minister of Public Works, Ontario.

SIR,—

I have the honour to submit the following statement showing the several contracts entered into with His Majesty during the twelve months ending 31st of October, 1930, in connection with the Public Buildings and Works, subject to the control of the Public Works Department of Ontario.

I have the honour to be,
Sir,
Your obedient servant,

DIGBY HORRELL,
Secretary and Purchasing Agent.

STATEMENT No. 12

Showing the several contracts entered into with His Majesty during the twelve months ending the 31st of October, 1930, in connection with the Public Buildings and Works, subject to the control of the Public Works Department, Ontario.

Date 1929	Work	Subject of Contract	Contractors	Amount
Nov. 21	Woodstock, Ontario Hospital	Filling, grading and fencing required for the railway siding.	B. N. Downing, Beachville, Ont.	$2,428 50
Nov. 27	Guelph, Ontario Agricultural College	Installation of electric elevator in Horticultural Building.	Roelofson Elevator Works, Galt, Ont.	2,645 00
Nov. 29	Ridgetown, Agricultural School	Extension to School Building, plumbing and heating.	A. J. Silcox, Ridgetown, Ont.	12,190 00
Nov. 29	Ridgetown, Agricultural School	Electric wiring required for extension to School Building.	L. A. Mason, Ridgetown, Ont.	1,435 00
Dec. 2	North Bay Gaol	Installation of steel cells and grille work.	Canada Wire and Iron Goods Co., Hamilton, Ont.	35,208 00
Dec. 2	North Bay Gaol	Installation of the plumbing, heating, and ventilating systems.	J. M. McPherson, North Bay, Ont.	34,420 00
Dec. 2	North Bay Gaol	Installation of electric wiring and fixtures.	P. Morrison, Sudbury, Ont.	3,280 00
Dec. 11	Guelph, Ontario Agricultural College	Installation of plumbing system in Central heating plant.	Frederick Smith & Sons, Guelph	2,925 00
Dec. 11	Guelph, Ontario Agricultural College	Installation of boilers, stokers and forced draft equipment.	Babcock, Wilcox and Goldie McCullough Co., Galt, Ont.	48,948 00
Dec. 30	Woodstock, Ontario Hospital	Construction of Men's Dormitory, Women's dormitory, dining hall, kitchen and power house and pipe tunnel.	Schultz Construction Co. Ltd., Brantford, Ont.	318,980 00
Dec. 31	Guelph, Ontario Agricultural College	Installation of coal handling equipment in pump house.	Webster Inglis Co. Ltd., Toronto	8,553 00
Jan. 8 1930	Guelph, Ontario Agricultural College	Supply and erection of new steel water tank	The Horton Steel Works, Ltd., Toronto, Ont.	9,000 00

STATEMENT No. 12—*Continued*

Showing the several contracts entered into with His Majesty during the twelve months ending the 31st of October, 1930, in connection with the Public Buildings and Works, subject to the control of the Public Works Department, Ontario.

Date 1930	Work	Subject of Contract	Contractors	Amount
Feb. 28	Woodstock, Ontario Hospital	Construction of radial brick chimney	Francis Hankin Co., Toronto, Ont.	2,690 00
Mar. 7	Guelph, Ontario Agricultural College	Electric wiring and conduit work for the Administrative and Students' Residence Building.	Bennett and Wright Co. Ltd., Toronto, Ont.	15,300 00
Mar. 22	Guelph, Ontario Agricultural College	Installation of plumbing, heating and ventilating system in the Administrative and Students' Residence Building.	Battler and Freiburger Co., Kitchener, Ont.	65,400 00
April 10	Guelph, Ontario Agricultural College	Installation of refrigeration plant in the Veterinary College.	Canadian Ice Machine Co. Ltd., Toronto, Ont.	2,055 00
May 6	Woodstock, Ontario Hospital	Installation of boilers	E. Leonard & Sons, Ltd., London, Ont.	23,278 00
May 20	Woodstock, Ontario Hospital	Installation of forced draft equipment	McLean Underfeed Stoker Co., Toronto,	4,980 00

C. KENTLETON,
Accountant.

Department of Public Works, Ontario
Toronto, February 17th, 1931.

Twenty-Fourth Annual Report

OF THE

Game and Fisheries Department

1930

PRINTED BY ORDER OF
THE LEGISLATIVE ASSEMBLY OF ONTARIO
SESSIONAL PAPER No. 9, 1931

ONTARIO

TORONTO
Printed and Published by Herbert H. Ball, Printer to the King's Most Excellent Majesty
1931

To His Honour W. D. Ross, Esq.,
Lieutenant-Governor of the Province of Ontario.

May It Please Your Honour:

I have the honour to submit herewith, for the information of Your Honour and the Legislative Assembly, the Twenty-fourth Annual Report of the Game and Fisheries Department of this Province.

I have the honour to be,

Your Honour's most obedient servant,

Chas. McCrea,
Minister of Mines.

Toronto, 1931.

TWENTY-FOURTH ANNUAL REPORT

OF THE

Game and Fisheries Department of Ontario

To the Honourable Charles McCrea,
Minister of Mines.

Sir:—I have the honour to place before you this Twenty-fourth Annual Report of the Department of Game and Fisheries of Ontario, covering the year 1930.

FINANCIAL

The table subjoined hereto shows in detail the various sources from which this Department derived its revenue during the fiscal year ending October 31st, 1930.

Revenue for Fiscal Year 1930

Game—			
Royalty		$96,811.80	
Licenses—			
Trapping	$50,969.00		
Non-resident hunting	72,140.00		
Deer	75,961.30		
Moose	7,832.00		
Gun	52,756.00		
Fur dealers	36,273.00		
Fur farmers	8,439.50		
Tanners	170.00		
Cold storage	175.00		
		304,715.80	
			$401,527.60
Fisheries—			
Royalty		$16,378.56	
Licenses—			
Fishing	$105,748.13		
Angling	209,019.75		
		314,767.88	
Sales—spawn taking		667.25	
			331,813.69
General—			
Guides' licenses		$6,212.00	
Fines		16,415.70	
Costs		1,764.29	
Sales—confiscated articles, etc		7,270.89	
Rent		5,004.00	
Commission		3,438.65	
Miscellaneous		1,429.52	
			41,535.05
Experimental Fur Farm			986.50
			$775,862.84

The following comparative table outlines the annual revenues and expenditures of the Department in each of the past five years, 1926 to 1930, inclusive, as well as showing the surplus in each of the years mentioned:

	Revenue	Expenditure	Surplus
1926	$682,063.32	$399,744.24	$282,319.08
1927	721,576.25	492,472.88	229,103.37
1928	733,259.75	518,054.96	215,204.79
1929	775,374.80	607,835.95	167,538.85
1930	775,862.84	687,545.90	88,316.94

During the year 1930, possibly owing to existing general conditions, little increase in the revenue collected was shown, and with the increased expenditures, attributable to the expanding activities of the Department, the surplus of revenue over expenditure continued to show a reduction. In view of the character of the work with the administration and performance of which this Department is charged from year to year, it becomes increasingly evident that the time is not far distant when the current expenditures will equal and possibly surpass the amount of the annual revenue at present collected.

STATISTICS

Appended to this report will be found statistical tables giving details of the various species and quantities of fry and fingerlings raised in our several Provincial fish hatcheries, as well as the designation and location of the waters in which such fry and fingerlings have been deposited.

In addition there are statistical tables in connection with the commercial fishing industry.

There will also be noted throughout this report statistics respecting the fur trade and other branches of Departmental work.

These figures have all been most carefully assembled and prepared, and afford very interesting and valuable information to those concerned.

GAME

The following table shows the number of large game hunting licenses which have been issued throughout Ontario during the past five years:

	1926	1927	1928	1929	1930
Resident moose	1,359	1,379	1,371	1,356	1,424
Resident deer	23,392	21,111	21,867	22,164	26,213
Non-resident hunting	1,698	2,237	1,721	1,975	2,015

A comparative study of these figures reveals the fact that the hunting features of this Province continue to attract to our great outdoors at that most glorious period of our year—the fall—thousands of sportsmen, and in numbers which are not at all diminishing, to participate in the opportunities afforded and enjoy the benefits which are derived from a vacation in the woods, communing with nature on its best behaviour, and returning the better equipped physically to combat the approaching rigours of a winter season.

The following is a brief summary of conditions throughout the year under review as they affected game birds and animals, compiled from the reports submitted by the District Superintendents of the Department:

Deer.—In the extreme northwestern section of the Province, i.e. the districts of Rainy River and Kenora, and in that portion of southern Ontario in which there has been an absolute close season on these animals, conditions have shown improvement, while in the northerly sections of southern Ontario, and the southerly sections of the eastern end of northern Ontario, where possibly the most intensive deer hunting takes place, the most optimistic statement would be that conditions are about the same as in the past few years.

Moose.—Some slight improvement is noticed here, especially in the northwestern portion of the Province.

Caribou.—There is a close season throughout the Province on this species at present. Conditions are improving and numbers on the increase in the north.

Ruffed Grouse or Partridge.—This species has increased in numbers very considerably, the improvement undoubtedly being attributable to the close season which has been in existence in late years.

Sharp-tailed Grouse or Prairie Hen.—These birds are prevalent only in the northwestern section of the Province, from where it is reported that they are increasing in number.

Quail.—Owing to climatic conditions these birds have not been as plentiful, and at present are found only in the southwestern counties.

Ducks.—These birds continue to be plentiful, and to afford good hunting.

Pheasants (*Ring-necked*).—Doing extremely well in the southwestern portion of the Province. They are now also found in the southern portions of the central and eastern counties, though the success which will attend their introduction to this last-mentioned section will depend very largely on climatic conditions. During the year, arrangements were considered, having in mind the transfer of the pheasant propagation activities of the Department from the Bird Farm at Eugenia, to the property acquired at Codrington, in the county of Northumberland.

The general public continues to show a very keen interest in the work of getting this species established where conditions are conducive to success, as is evidenced by the fact that in 1930, some 12,000 pheasant eggs were distributed to 679 applicants. The birds hatched from these settings, when capable of taking care of themselves, are liberated. The co-operation received along these lines is very deeply appreciated.

Supplementing this work, 1,578 adult live ring-necked pheasants were liberated at various points by the Department, from stock raised at the Bird Farms at Eugenia and Normandale.

Hungarian Partridge.—There are some signs of improvement apparent in conditions as they affect these birds in the central counties where the introduction has been undertaken.

Plover and Snipe.—These birds are extremely scarce.

FURS

There was a considerable decline in the number of pelts on which royalty was paid during 1930. Market conditions and the prevailing low prices possibly had the effect of impressing upon trappers the advisability of curtailing operations in a season when financial returns would be somewhat below the average. The wisdom of such a course will be evident in the increased number of fur-bearers available when price conditions improve. However to maintain the output at its present point it would appear to be absolutely essential that strict observance of all regulations, and more particuarly as they affect close seasons, should be enforced, and in view of the fact that these regulations are not unreasonable, the Department does not anticipate any great difficulty in securing the desired co-operation.

Summary of conditions as applied to fur-bearing animals is as follows:

Bear.—Decreased catch, though numbers increased, especially in the north.

Beaver.—Catch remained practically stationary. In the closed areas numbers are apparently increasing, though in the areas where an open season exists, conditions are not improving. A continuation of the restrictions on the taking of this species is most desirable.

Fisher.—Catch shows considerable decrease, and while the numbers may not be decreasing, there is little, if any, improvement in conditions.

Fox.—Catch shows considerable decrease. Undoubtedly the numbers of these animals are decreasing, but it is anticipated that the close season provided by the enactment of 1930, and the protection afforded to this species thereunder, will have a beneficial effect on future conditions.

Lynx.—This species is becoming very scarce throughout the Province, as evidenced by the annually diminishing catch.

Marten.—Another species which is losing ground. Catch decreasing annually. No improvement is evident except possibly in Algoma district. They require all the protection now afforded.

Mink.—Catch about stationary, or slightly increased. Conditions remain about as usual, though in some districts, widely separated, some improvement is shown.

Muskrat.—Catch shows ten per cent. decline. Conditions improved somewhat during the year in southern Ontario, though numbers continue to be very scarce in the north.

Otter.—Catch considerably decreased during the year. Conditions remain about the same as in the past few years, with some improvement shown in the northern portion of southern Ontario and in the central part of northern Ontario. Remarks on close season and restrictions on taking of beaver apply to otter.

Raccoon.—Catch remained stationary. This species is prevalent in southern Ontario only, where, generally speaking, conditions show slight improvement.

Skunk.—Catch continued to decrease, though numbers are still reported plentiful.

Weasel.—Catch declined substantially, though numbers are reported plentiful.

Wolf.—Numbers would appear to be decreasing. (See Wolf Bounties.)

The following table compares, for the past six years, pelts of fur-bearing animals, other than those which were ranch-raised, on which royalty was paid:

	1925	1926	1927	1928	1929	1930
Bear	2,014	1,635	1,472	1,575	1,888	1,594
Beaver	48,364	27,597	20,738	22,040	17,348	17,493
Fisher	1,936	2,618	3,904	5,400	4,343	2,510
Fox (cross)	2,601	4,175	3,502	4,116	1,606	1,188
Fox (red)	22,198	30,535	26,112	25,943	14,550	11,076
Fox (silver or black)	433	620	403	646	197	154
Fox (white)	974	226	977	590	16	116
Fox (not specified)	61	165	136	160	132	106
Lynx	2,200	3,884	4,568	3,845	1,718	871
Marten	3,125	3,177	3,261	3,492	2,738	1,770
Mink	68,138	65,299	37,628	32,009	29,893	30,226
Muskrat	534,739	387,022	469,947	514,161	714,019	643,999
Otter	4,522	4,304	3,168	4,510	4,562	3,986
Raccoon	22,157	21,002	15,958	13,513	13,653	13,757
Skunk	67,100	75,503	59,488	79,442	75,773	72,667
Weasel	34,365	63,599	72,645	79,425	117,053	99,704
Wolverine	8	11	15	19	6	9
Total	814,935	691,372	723,922	790,886	999,495	901,226

The value of these pelts in 1930 to the trapper amounted to $2,410,987.79, which is a total considerably lower than that of the preceding year, though, as previously stated, this reduction can very largely be attributed to the unfavourably low values which applied to the fur industry due to a period of extreme business depression.

In addition to the above, the total of ranch-raised silver and black foxes, dressed or exported, on which no royalty is payable, and which were raised on the licensed fur farms of the Province, was 6,446; 4,906 of which were exported and the balance of 1,540 were dressed in the Province. It is estimated that these pelts had a value of $430,786.18.

FUR FARMING

The possibilities which the successful raising in captivity of fur-bearing animals on properties operated as fur farms under license from this Department continue to attract increasing attention from interested parties in many sections; and as the interest of the individual fur farmer becomes more firmly established in his own particular operation, generally speaking the fur-farming industry throughout the Province receives additional assurance of future success. At this time it is interesting to note that every fur-bearer which is native to Ontario is now included in the list of animals with which these licensed fur farms are stocked for propagation purposes.

Fur farmers' licenses issued during the past five years are as follows:

1926	1927	1928	1929	1930
783	986	1,148	1,360	1,557

The following is a table showing the list of animals reported to be stocked on these licensed fur farms as at December 31st, in each of the years reported upon:

Animals Stocked on Licensed Fur Farms as at December 31st

	1926	1927	1928	1929	1930

EXPERIMENTAL FUR FARM

Investigations dealing with many problems connected with fur-farming were carried out during the year. Owing to the appearance of several outbreaks of contagious disease among Ontario foxes, considerable time was spent in finding the causes and possible treatment for two of them.

At the present time at least five contagious diseases are recognized among foxes, namely distemper, contagious pneumonia, hemorrhagic septicemia, encephalitis, and paratyphoid. The Experimental Fur Farm investigated distemper and contagious pneumonia.

Parasites and parasitic diseases continue to be of major importance. Parasitic infestation among the fur-bearers of the Dominion appears to be widespread. This applies not only to ranch-bred animals, but also to animals taken directly from their natural environment. From the data gathered it is found that fur-bearers in the wilds invariably harbour one or more parasites. Particularly is this true of the animals that frequent sluggish waters and feed upon the fish that live in these waters. To what extent parasitism may be responsible for heavy annual losses among our fur-bearing animals offers a wide field for investigation.

Observations were continued with regard to the most suitable feeds and methods of feeding for the large variety of animals on hand. This subject has now to be studied not only from the nutritional point of view but from the economic as well. With the fox industry largely dependent upon the sale of pelts for revenue, the question of overhead expenses is becoming more important yearly.

Throughout the year there has been a marked increase in correspondence. Enquiries were received from every province and many foreign countries concerning every phase of fur-farming. During the summer and fall months interviews take place daily with fur farmers regarding their various difficulties. Frequently sick and injured animals are brought for treatment.

Two bulletins were issued, namely, "Feeding and Diseases of the Fox," and "The Mink in Captivity." Both publications are meeting with a steady demand.

At the request of the Ontario Fox Breeders' Association the technical staff, in conjunction with the lecturers of the Ontario Veterinary College, gave a series of lectures and practical demonstrations at the Summer School held in Guelph, Ont. The course was well received by the breeders present.

Four hundred and two autopsies were performed and findings reported to the owners. One hundred and four animals were treated for sickness and injuries. Eight hundred tests to determine parasitic infections were done.

OBSERVATIONS ON FEED

Two bulletins were published dealing with the feeds and feeding of the fox and mink. Both were written from the practical viewpoint. The methods advised are in daily use at the Experimental Fur Farm and, while subject to revision, they have proven to be satisfactory. There is much to be said for and against the publication of feed charts, giving exact quantities fed daily per animal. Feed charts are only a guide to the novice, and should be accepted as such. When more experience is gained in feeding he can adjust his charts to meet the individual requirements and particular environment of his animals. Feed charts do, however, prevent serious errors in diet and in the quantities fed.

The Fur Farm has consistently advocated a high meat ration for adults and pups. The latter should receive meat with the first feed. Heavy cereal rations are entirely unsuited for the fox.

A number of observations on the digestibility of a variety of feeds used for foxes were made this year. These were pelting foxes, and examinations were carried out at varying intervals after feeding.

Meat and Fish.—Meat and fish appear to be about equal in digestibility, and are by far the most thoroughly digested of all the feeds fed. Herring fed whole were better digested than when ground.

Cereals.—A variety of cereals were used; all of them were held for longer periods in the stomach than meat or fish, and digestion in the intestines was very slow. A large residue of undigested material was found in the intestines.

Vegetables.—Unless finely ground to a pulp, vegetables are practically indigestible for the fox. Even when finely ground a large residue remains in the intestines. Canned tomatoes were found to be superior to either beets or carrots.

Eggs and Milk.—When fed without the addition of other feeds, eggs and milk are not assimilated to any extent by the fox. If mixed with bread and other solids, their digestibility is increased.

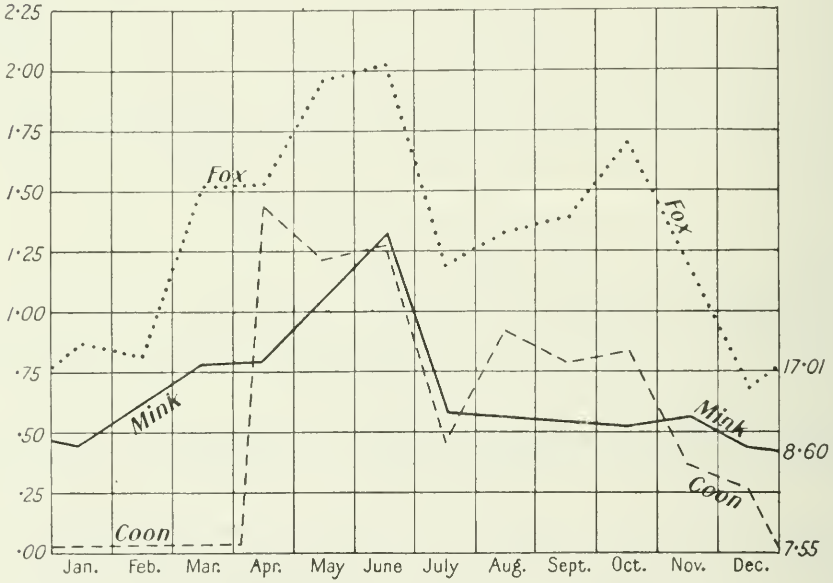
These observations are confirmed with practical experience in the living animal. Foxes to obtain maximum development require a high meat protein diet and cereals should be looked upon as purely supplementary feed and not used to replace meat or fish. Pups are unable to handle bulky cereal feeds in large quantities. To obtain maximum nourishment easily digested food is essential.

Eggs and milk should be fed mixed with other food and not as a single item of diet. Sick foxes should not receive either eggs or milk, but should be fed raw meat or blood. Coarsely ground vegetables are of little nutritive value, but may be beneficial as a roughage, helping to prevent constipation.

There is still a tendency with beginners to overfeed in the summer months. Especially is this the case with farmers accustomed to handling domestic animals and taking a pride in having them in good shape. It is apparently difficult for them to realize that it is natural for the fox to appear ragged and thin during the summer months and that this condition is not due to lack of feed.

FEED COSTS

With fur-farming now being considered as a commercial proposition, the cost of overhead expense is an important item. When animals were valued only as expensive breeding stock the feed cost was not as important as today, when most ranches are operating on a strictly pelt basis.



Graph of 1930 feed costs. The figures at the left show the average monthly cost each; those at the right the average yearly cost.

In the records kept at the Experimental Fur Farm an endeavour is made to account for each ounce of feed fed daily to each animal on the premises. These amounts are totalled monthly and a careful check kept on the cost. During the past fiscal year (November 1st, 1929, to October 31st, 1930) the following amounts of feed were consumed by the various animals kept on the farm.

Horses		28	Powdered yeast	lbs.	224
Meat	lbs.	21,027	Powdered milk	"	95
Frozen fish	"	4,000	Milk	qts.	500
Canned fox meat	"	500	Eggs	doz.	119
Hay	"	11,540	Root vegetables	tons	6
Grain	"	8,300	Canned tomatoes	gals.	30
Fox bread	"	7,819	Cranberries	cases	2
Fox biscuits	"	400	Raisins	"	1
Fox meal	"	300	Poplar wood	loads	8

The average monthly cost per animal is obtained by dividing the total monthly cost by the number of animals on hand. The average monthly cost per animal totalled for the year equals the cost of feeding one animal of that species during 1930. The column on the left of the above graph shows the average cost per animal and on the right is the total average yearly cost per animal.

Young animals are not listed until July, when it is estimated that they consume as much food per head as the adults. This accounts for the sharp elevations in May and June when the females require large amounts of nourishing food and the pups as well are eating a certain quantity. The drop in July is when the youngsters first appear as adults in the records. The second rise in September and October is due to the meat ration being increased as is advocated in the bulletin for that time of the year. Although the meat ration continues to be heavy in November and December, horse meat constitutes a large part of the meat ration for all breeding stock. Horse meat purchased locally is far below abattoir prices of beef fox meat. This would appear to closely coincide with ranch practice throughout the Province. Owing to feeding two tons of frozen fish, purchased at a reasonable price, the costs may be a little low during the winter months but on the whole they should compare favourably with ranches elsewhere. Raccoon hibernate during January, February, and March, and eat little during November and December. This will account for the graph of feed costs being low for these animals during the above-mentioned periods.

Fox.—The average cost of feed for one fox at the Experimental Fur Farm during 1930 was $17.01. The cost of a pair and their young up to the age of three months would be $34.02 for the year. The pups are figured separately as adults in the amount of food consumption after June 30th. Each pup cost $7.70 to feed from three months up to pelting time. The cost of feed for a pair of foxes and three pups for the year 1930 would be $57.12. As the adult pair must be carried over each year or pups substituted for breeders, the cost of feed for each pup raised to pelting maturity would be $19.04. This is for an average of three pups to the litter, which is more than ideal for most ranches. As well as the cost of feed for each animal pelted, labour and overhead on pen construction must be considered. Compared to other ventures in live stock, fox-ranching would appear to be a legitimate enterprise, even at present pelt values.

Mink.—The average feed cost for each mink in 1930 was $8.60. As the general practice is to keep one male for every three females, the cost of a unit would be $34.40. An average of ten young to a unit would cost $3.51 each or $35.10. The total feed cost of a unit of four mink and ten young would be $60.50. As the adults are carried over or substituted, each mink raised to pelting maturity would cost $6.95 for feed. Mink-raising is remunerative from a pelt basis providing the overhead cost of pen construction and labour is not too high. In comparison to the fox, the mink will consume a surprising amount of feed for such a small animal.

Raccoon.—Notwithstanding the fact that the raccoons hibernated for at least three months and ate but little in two other months and were fed as economically as possible without sacrificing a nourishing breeding ration, the cost of feed for 1930 was $7.55 per coon. A unit of one male and three females would cost $30.20; youngsters $3.53 each so that an average unit of twelve young and four adults would cost $72.56 for the year. The feed cost to raise each young coon up to December 31st, 1930, was $6.05. However, raccoon do not mature the first year and should be kept over until the following pelting period before they are suitable as good pelters. The young as a rule do not breed until they are two years old so that they cannot be expected to produce any further young while being kept over the second year. If they are kept over there would be an additional cost of $7.55 each, which brings the cost up to $13.60.

Whether the young are pelted the first year at low prices or kept over until the second year and sold at top market price, the cost of feed alone is as much as could be expected from the sale of pelts. When the cost of pen construction, time, and labour are also added it would appear that at present pelt prices the raising of raccoon would not be a profitable venture unless an extremely low-priced feed were available.

Housing of Animals

There appears to be a tendency to overlook the necessity for providing fur-bearing animals with warm, dry nests. It is safe to say that many losses are encountered annually due to neglecting this important factor.

Mink are very susceptible to cold and damp quarters, particularly during seasons when the weather is changeable. In October and November, the Fur Farm received for examination a number of cases dying with pneumonia.

If the nest-box is packed full of straw or hay, the mink will make a twisting tunnel, leading from the entrance into his nest. This nest is about the size of a robin's and is completely covered and hidden from view. Shavings are not recommended except during the summer months. If the weather is wet and stormy frequent changes of straw are necessary to insure comfortable sleeping quarters and healthy surroundings.

The mink, otter, and beaver can normally swim for hours in the coldest waters without any ill effect. Under natural conditions, the strong oily guard fur completely protects the soft underfur. The latter will be found to be perfectly dry on examination. This is not the case with mink in captivity and repeated soaking with rain will gradually penetrate the underfur, producing a chilling effect on the body. If this effect is further accentuated by sleeping in wet, cold nest-boxes, the resistance to disease is lowered with resulting losses from pneumonia. Tail-sloughing appears to be the direct result of insufficient and unsuitable bedding at times when the weather is alternately freezing and thawing. The skin becomes irritated and infected through constantly rubbing on wet and freezing bedding.

Foxes should be provided with shelter against rain. Not only is the fur adversely affected but repeated wettings are injurious to foxes affected with lung worm. Lung-worm pneumonia is particularly prevalent in the changeable seasons. Adult foxes can withstand the coldest weather, but this is not the case with pups. Many new-born pups are lost owing to cold nest-boxes improperly constructed. It will pay through the winter months to inspect the nests repeatedly.

Some adults will chew through the sides and top of the boxes, and the packing material will become lost and scattered. Many ranchers now favour a nest with a depression on the floor. The pups are thus kept together and cannot wander off to the sides of the box and become chilled. The use of heavy compressed-paper fabrics for insulating the nest-box is meeting with favour.

NOTES ON BREEDING

Breeding operations have been carried out along strictly practical lines. Selective mating and the continued concentration of the descendants of superior foxes has resulted in a steady improvement in the pups and pelts.

Foxes which are not producing a satisfactory quality of pups are being rapidly eliminated.

Cross foxes are attracting considerable attention and many enquiries have been received regarding possible results from given matings. Before definite statements can be made, thorough investigation of the subject is required.

So far, reds mated to silver blacks have produced a predominance of red pups. A majority of these pups have bluish-black markings on the chest and throat. They produce pups with a distinct cross marking, and produce cross pups when mated to silvers and black foxes.

Those engaged in cross fox-breeding are advised to carry on to the second generation at least. Particularly is this the case if the pups have the markings referred to.

DISTEMPER OF FOXES

During the past year we had the opportunity of investigating a number of outbreaks of infectious diseases among silver foxes. Several of these resembled distemper of the dog and were later found to be transmissible from dogs to foxes.

The foxes were observed on the ranches where the disease occurred and every assistance was given the staff in making observations and securing laboratory material.

CAUSE

Distemper is a highly contagious disease affecting animals and is due to a filtrable virus. The susceptibility of the fox to canine distemper has been a subject of considerable controversy among fox ranchers and veterinarians. In one particular outbreak, two dogs, obviously suffering from distemper, were at liberty in the ranch cook-house. We were of the opinion that it was necessary to eliminate or confirm the possibility of the foxes having contracted the disease from these dogs.

With this objective in view, two healthy scrub foxes were shipped to the Veterinary Hospital conducted by Dr. J. A. Campbell, Toronto. They were placed in the isolation distemper ward in pens adjacent to dogs manifesting all stages of virulent distemper. Both foxes were dead within a month and showed similar post-mortem lesions observed later in our investigations.

COURSE AND CHARACTERISTICS

In the epidemics observed, the disease originated in one or two pens, and did not break out simultaneously from all quarters of the ranches. Where it was not checked, however, in a few weeks a general epidemic was in force.

The heaviest mortality was among the pups. This is to be expected considering the general practice of running the litters in the same pens for the greater part of the summer. One infected pup will quickly give the contagion to his litter mates. Where pups are housed in sheds a rapid spread can be looked for.

The thermometer offers little assistance in diagnosing the disease in the incubation period, the period when the fox may be sickening but does not show any definite symptoms. Even with normal foxes, the excitement of catching and handling will elevate the temperature. Once the temperature drops to subnormal, i.e. below 100 degrees, death can be expected in a short time.

SYMPTOMS

A change in the colour and consistency of the feces is an early symptom. At first the appetite is irregular, but not entirely lost. A purulent discharge from the eyes and nose is usually present and becomes more prominent in the later stages. The fox suffers from extreme thirst judging by the craving for water. There is a rapid decline in condition, accompanied by a harsh dry pelt. The individual hairs tend to stand on end.

All sense of direction is lost as demonstrated by the fact that the fox walks blindly against the kennel and sides of the pen. A tendency to walk in circles is very noticeable. Some foxes occasionally emit an unusual sighing sound. The odour peculiar to distemper is prevalent and is soon recognized by those having experience with the disease in dogs. In the final stages the eye becomes sunken in the head, severe twitchings of the extremities develop, and the fox dies in a coma, which may last as long as twenty-four hours.

POST-MORTEM FINDINGS

Post-mortem examinations of foxes frequently show no pathological changes. This may be true of cases that have shown severe symptoms for two weeks. The carcass is usually emaciated. The emaciation may not be so marked in foxes dying rapidly. The most constant change is found in the brain, which may be inflamed and contain fluid under its coverings.

A pale tallow-coloured liver, friable and easily broken, is characteristic. Other abnormal conditions, due to systemic infection, such as inflammation of the kidneys, lymph glands, intestines, and occasionally the heart muscle, may be found.

DIFFERENTIAL DIAGNOSIS

Encephalitis.—Death occurs within two days, often with no symptoms having been noticed. Frequently the fox is picked up dead by the keeper. The eyes are prominent and the animals die in convulsions. The carcass is in a good state of nutrition. If any discharge is present from the eyes and nostrils, it is thin and watery.

Distemper.—Death may not occur for one to three weeks. The eyes are sunken in the head. The carcass is emaciated. There is a purulent discharge from eyes and nostrils. The fox dies in coma.

PREVENTION

Canine distemper of the dog is transmissible to foxes. The dangers of taking the infection from dogs into the fox ranch are obvious. As a rule distemper affects dogs from three to nine months of age. It would be a wise precaution to buy only adults for household pets or watch dogs.

Should the rancher commence losing a fox or two during the winter months, it is advisable to determine the exact cause of death. Epidemics appear to have commenced in this manner, the disease not assuming alarming proportions until the pups are attacked in the early summer. Fox ranches are more or less isolated units, and this favourable factor should be fully employed to prevent exposure to disease.

Any foxes purchased or exhibited should be kept isolated from the main ranch.

TREATMENT

Once the disease appears, strict sanitation and isolation are the two weapons the rancher has to depend upon to fight the disease. Attendants should enter the pen only when absolutely necessary. This rule should hold good, even at the expense of pen cleaning. It is advisable to feed and water through the wire. Foxes showing definite symptoms should be destroyed and the carcasses burned or deeply buried.

Medicinal treatment of the sick individual is of no avail. In the observation of over two hundred cases not one fox recovered.

The attendant handling sick foxes for treatment opens another avenue of spreading the infection to healthy foxes.

Isolation of all foxes that have been in contact with or located in pens near the sick ones is imperative. These isolated foxes should be placed in the remotest portion of the ranch and watched carefully for any developments. When pen space is available, not more than two foxes should be kept together and better still one fox to a pen.

These foxes should have a separate attendant, but if this is not possible the hands and footwear must be disinfected when going from one group to the other. A shallow pan about half filled with bran and then poured full of disinfectant can be left at convenient places for this purpose. If it is necessary to handle sick or contact foxes a light coat which can be boiled is useful.

BIOLOGICS

The prevention of distemper by the use of biologics has been attempted experimentally with encouraging results. Sufficient data, however, have not been obtained to warrant specific statements as to their efficiency. Seven foxes injected simultaneously with 10 c.c. Laidlaw-Dunkin anti-canine distemper serum and 5 c.c. vaccine were exposed to infection and remained healthy. The use of 10 c.c. doses of the serum alone appears to check the infection for some two to three weeks and would, therefore, need to be repeated every three weeks or less to insure protection until the infection subsides. It is to be hoped that further research will settle the case of the usefulness of biologics in fox distemper.

COMMENT

While several authorities have stated that canine distemper may be transmitted to foxes, there has been considerable controversy among men associated with the fox industry on this subject. We have found that foxes when exposed to natural infection by being placed in pens adjoining dogs suffering from clinical distemper came down with the disease. It would appear that the early and severe symptoms and the rapid fatal termination rather than the slower course followed in dogs is due to the highly nervous constitution of the fox. The fox being a wild animal has not been exposed to repeated infections as has the dog and would therefore not have any natural immunity against distemper. The infection appears to affect the central nervous system, and cases in foxes could be likened to the so-called nervous form of distemper in dogs. In over 200 observed cases of fox distemper not one animal made a recovery. It would thus appear that foxes have no natural resistance against the disease.

LABORATORY PROCEDURES

Bacteriological Examination.—Carcasses of foxes dead within 12 hours were obtained and blood agar plates planted from the various organs. No pathogenic organisms were isolated with the exception of a pure culture of streptococci from two cases. Injections of this organism in foxes and other experimental animals failed to give rise to any disease. It would, therefore, appear to be a secondary invader of a non-virulent type and certainly not responsible for the outbreaks. Smears and cultures of the heart's blood failed to show any organisms, nor did the injection of heart's blood intravenously in the ear veins of rabbits and subcutaneously and intraperitoneally in guinea pigs give rise to any symptoms of disease. Emulsions of ground-up spleen and brain also failed to produce the disease in rabbits and guinea pigs.

Transmission to Foxes.—The clinical picture presented by sick foxes at the ranch closely resembled that of canine distemper, which is known to be caused by a filtrable virus. As no pathogenic organisms could be isolated, experiments were made in infecting fox pups. Intramuscular injections with 2 c.c. of an emulsion of the spleen and brain hypodermically produced the disease without fail. The material for injections was obtained from a fresh carcass of a fox dead of the disease on the affected ranch.

A Berkefeld filtrate of the brain and spleen of a fox dead of the disease was obtained, using a 6- by 1-inch "M" candle. This was plated on blood agar to be sure it contained no organisms and was injected intramuscularly and produced the disease in its typical form.

By the use of fox pups for experimental animals the incubation period was determined as being from two to three weeks with death in three to four weeks. The disease has been proved to be due to a filtrable virus.

Transmission to Ferrets.—Encephalitis is the only other present known infectious disease of foxes caused by a filtrable virus. Green[1] states definitely that fox encephalitis does not affect ferrets, nor was he successful in transmitting encephalitis to ferrets by injections with the virus of fox encephalitis. It is well established that the virus of canine distemper is virulent to ferrets.

Healthy three-month-old ferrets not previously exposed to distemper were secured and injected intramuscularly with an emulsion of the ground-up spleen and brain of one of the foxes dying after the above experimental injections. They developed typical canine distemper symptoms and also those of fox distemper, viz. purulent discharge from the eyes and nose, rapid emaciation, rigours, coma, and death.

A Berkefeld filtrate prepared as outlined above was also injected in a second series of ferrets and likewise produced the disease.

Summary.—A severe infectious disease of foxes has been studied over a period of two months. Some 200 cases have been observed and the opportunity was afforded of post-morteming numerous carcasses as well as some 20 foxes dead within 12 hours for ideal bacterial examination. The disease has been proved to be caused by a filtrable virus and is not transmissible to rabbits or guinea pigs but is virulent to ferrets. From the symptoms, post-mortem, its highly infectious character, transmission to ferrets and its being caused by a filtrable virus the disease would appear to be analagous to canine distemper.

Infectious Pneumonia

Several severe outbreaks of pneumonia have been reported in the Province during the past year. There appears to be two separate types of infection. Lobar pneumonia affects fox pups causing a peracute fatal pneumonia. It is to be noted that in the outbreaks under observation no adults contracted the disease although many were equally exposed to the infection. The second type is that of broncho-pneumonia, and both pups and adults may be equally affected. The fox appears to have little resistance to either type and clinical cases seldom recover. If the infection is unchecked the mortality is extremely heavy, often reaching from 60 to 100 per cent. of the exposed susceptible animals.

---

[1] Jour. of Hygiene, July, 1930.

LOBAR PNEUMONIA

Cause.—A virulent hemolytic streptococcus has been isolated from all cases examined. The infection is found in pure culture in the lungs. Smears of the bloody serum oozing from the cut surface of the lesions when stained will be found to be swarming with gram-positive short-chain streptococci organisms.

Course and Characteristics.—In our experience only pup foxes will be attacked. Dr. F. W. Schofield[1] also reports this to be true in an outbreak investigated in 1929. Sometimes the entire litter of four- to five-month old pups will be wiped out while the female in the same pen remains healthy. Cases may appear suddenly but can generally be traced to one or two pens from where the infection has spread or been carried to several parts of the ranch. The history is usually that one or two pups of a litter have died but the owner has not been alarmed until the infection appeared in several adjacent pens. It is to be noted that outbreaks studied have always occurred on ranches where there was lung-worm parasitism. Lung worm and weak pups will often be the first cases.

Symptoms.—Pups may be picked up dead without showing any previous symptoms. Usually, however, pups in excellent health and with previous good appetites will be noticed to miss their feed. In a few hours they will stand about with heaving sides and in apparent distress. The breathing is heavy and laboured and especially will this be noticeable if they are chased about the pen for catching. Bloody froth may appear at the nose. The affected pups become weaker and finally die in a coma. Most cases die in 24 hours but some few may last for a week.

Autopsy.—The carcass is usually in excellent condition unless the fox has lasted longer than the usual one to two days. If the animal has been sick for a week or more the carcass will be thin and emaciated. Bloody froth drops from the nose if the carcass is elevated by the hind legs. On opening the thoracic cavity bloody wine-red serus fluid is often present. The entire lung tissue will be greatly swollen and congested. The colour is dark red from the engorged blood which makes the lung tissue appear like liver-red hepatization. Bloody serum oozes from the cut surface of the lung. The thoracic lymph glands are enlarged and acutely inflamed. The other body organs are usually normal. The characteristic post-mortem with the engorged lung tissue is diagnostic.

BRONCHO-PNEUMONIA

Cause.—A mixed infection is present with a virulent streptococcus as the predominant organism accompanied by staphylococcus and colon.

Course and Characteristics.—The disease is a typical pneumonia with sickness lasting about three days to one week in adults. When pups are attacked they succumb in a few days. Foxes of all ages will contract the disease if equally exposed to infection. The history is usually that a few adult foxes have been lost during the early spring but the owner has paid no attention until the infection has spread and cases suddenly appear in all parts of the ranch. When the pups are thus exposed they appear more susceptible and the owner may lose all of them before he realizes the seriousness of the situation or has time to take any precautions. When the pups are exposed they do not last long and also help to spread the infection to the rest of the adults. When once exposed, the adults appear just as susceptible as the pups but they will not succumb as quickly The adults may last two days to one week.

---

[1] Ontario Veterinary College Report, 1929.

Symptoms.—A number of animals will be affected suddenly, as opposed to the gradual onset of secondary lung-worm pneumonia or verminous bronchitis. The breathing is laboured with a distinct rattling sound in the trachea. This peculiar sound is produced by each breath being forced past the large amounts of pus that accumulate in the upper air passages. A purulent discharge may drip from the nose and sometimes small amounts will collect in the corners of the eyes. The appetite is fair at first but gradually lessens. The stools are normal at the outset but later and just prior to death the feces become liquid and foul-smelling. The foxes become weaker and die in a coma.

Autopsy.—Post-mortem findings are characteristic of broncho-pneumonia. Areas of pneumonia are found throughout the lung tissue. The lungs are enlarged but the pneumonic areas are distinct and do not tend to run together or involve the entire lung. The bronchioles and trachea are inflamed and filled with much purulent material. The cut surface of the lung tissue will ooze greenish pus from every tiny air passage. The lower bowel may show slight traces of inflammation from the severe diarrhoea in the last stages of the disease. The other organs show no lesions. The carcass is usually in good condition but this will depend on the length of sickness. Emaciation is seldom present.

TREATMENT AND PREVENTION

The two pneumonias will be considered together as to treatment and preventions. Their differentiation is not of importance to fox ranchers. Medicinal treatment of the affected foxes is not advisable. Any clinical cases and also all foxes in the same pen as those showing symptoms or in pens where other foxes have died should be immediately isolated in special pens or placed in the remotest part of the ranch and watched for development. Care should be exercised not to carry the infection to other parts of the ranch on the feet or with the feed. The foxes should be fed and watered from outside the pens and the pens should not be entered unless absolutely necessary.

Whenever foxes die from an unknown cause the carcasses should be sent immediately after death to a pathologist for post-mortem examination. Once a definite diagnosis is given steps can be taken immediately to stop the spread of further infection. Once the disease is found in several parts of the ranch the difficulty of stopping further losses is more than doubled. Ranchers would be well advised to have every death on the ranch accounted for as soon after death as posible.

When a definite diagnosis of infectious pneumonia is arrived at and the causative organisms isolated an autogenous bacterin may be prepared at the laboratory. With proper facilities this will take two or three days to prepare. Injections will be found to be of great benefit in stopping the spread of further infection. Bacterin treatments of sick animals may also be of value. If the ranch has suffered outbreaks on successive years it will be well to have a considerable quantity of the bacterin prepared and to inject the foxes each year.

LABORATORY PROCEDURES

Lobar Pneumonia

Bacteriological Findings.—Stained smear of the bloody exudate oozing from the cut lung surface shows gram-positive cocci both singly and in short chains. A stained smear of the trachea shows both short-chain streptococci and grouped gram-positive staphylococci.

Blood agar culture plates of the cut lung surface showed pure culture of a markedly hemolytic organism. Colonies are grey, tiny discrete and are surrounded by a lake of hemolysis. Plates of the trachea show both hemolytic and staphylococcus colonies.

Animal Inoculation.—Rabbits injected intravenously in the ear vein with a drop of the exudate oozing from the cut lung tissue died in 36 hours. A stained smear of their heart's blood shows numerous gram-positive cocci arranged singly and in short chains. An injection with heart's blood intravenously into two more rabbits caused death in 18 hours.

Cultural Characteristics.—The cultural characteristics are as follows:

Agar slants—No perceptible growth.
Blood agar—Tiny discrete grey colonies in the centre of a lake of marked hemolysis. Colonies tend to remain separate, no spreading.
Broth—Not good growth unless serum added, sediment.
Gelatin stab—Slight growth on surface, no liquefaction.
Litmus milk—Acid reaction, no curdling.
Potato slants—No growth.
Sugar reactions—Ferments dextrose, lactose, salicin with acid but no gas. No action in mannite, maltose, saccharose.
Staining—Gram-positive cocci. In tissue form short chains.

Autogenous Bacterin.—Four blood agar slants and one tube of serum broth planted with the hemolytic streptococcus isolated in pure culture from the lungs. One agar slant of the *Staphylococcus aureus* isolated from the trachea. Growth for 24 hours and then slants washed off with normal saline and mixed with the broth tubes in sealed ampules and heated in water bath for one hour at 65° C. A few drops of each ampule planted on blood agar plates as test for sterility. No growth in 24 hours. Diluted with sterile normal saline to the required strength and placed in sterile containers with rubber needle caps and 0.5 per cent. phenol added as a preservative.

The dose is ¼ c.c. two days apart to all exposed foxes.

Control.—Injected fox pup placed in pen with a sick fox. The pup showed no signs of disease although the sick pup died about 10 days after of hemolytic streptococcus pneumonia. Shortly after the injections 7 immunized pups escaped from their pen and dug into a pen where four pups had died of pneumonia, the last one the day prior. The pups ate what feed remained in the pen and stayed in the kennel over night, but all remained healthy. After the entire ranch had been inoculated no further cases developed, although two pups died while the bacterin was being prepared. One hundred and twenty-five exposed fox pups and a few adults were treated with two ¼ c.c. doses of the bacterin given two days apart.

Conclusion.—An outbreak of infectious pneumonia in silver foxes has been studied and found to be caused by a hemolytic streptococcus. It would appear to be a virulent organism causing the death of fox pups with a severe lobar pneumonia. Age immunity is marked in adult foxes. Although several adult females were equally exposed to the infection none developed the disease. The outbreak was checked after a mortality of 10 per cent. in the pups before treatment was commenced. Immediate isolation of sick and contact animals and rigid sanitation was advised and an autogenous bacterin prepared. The bacterin appeared to be of great benefit and gave an immediate positive immunity. Injected control fox pups placed with sick animals were 100 per cent. protected. As with all outbreaks of infectious disease, this one may have been self-limiting but the controls favour good results from the bacterin. The above outbreak appears to be similar to that of one studied by Dr. F. W. Schofield and recorded in the Ontario Veterinary College Report, 1929.

BRONCHO-PNEUMONIA

The outbreak occurred on a modern, well-kept ranch causing a total loss of 67 foxes which included all the pups, some 45 in number, and 22 adults of all ages. Two visits were paid to the ranch but no error in management could be detected. The pens were almost all completely board-floored and no serious trouble had occurred from lung-worm infection. Several adults had died from time to time and the losses were increasing when the pups arrived. The pups all died within a short period. The remaining adults were then affected in epidemic proportions. Cases had occurred in all parts of the ranch showing that the infection was widespread.

Bacteriological Findings.—Stained smears of the cut lung tissue oozing with pus from the tiny bronchioles showed several organisms. When plated out on blood agar, streptococci, staphylococci, and colon bacilli were isolated.

Injections of the pus from the lungs intravenously into the ear veins of rabbits caused death in 48 hours. Both streptococcus and staphylococcus organisms were present in stained smears of the heart's blood of the injected rabbits. Ferrets injected subcutaneously with pus from the fox lungs came down with a typical broncho-pneumonia similar to that of the foxes and died in ten days. The same organisms were isolated from the ferret lungs as were found present in the fox-lung lesions.

An autogenous bacterin containing all three organisms was prepared and all the remaining foxes injected with ½ c.c. doses two days apart. Three more animals died while the bacterin was being prepared, but no further losses occurred after ten days from the first injections. Apparently the three foxes died before they had time to work up sufficient immunity. One of these foxes was given ¼ c.c. injections of bacterin every two days, but although it lasted some three weeks and appeared well on the way to recovery it finally succumbed.

Summary.—An outbreak of infectious disease in silver foxes has been studied and would appear to be a severe broncho-pneumonia caused by a mixed infection with streptococci, staphylococci, and colon. Cultures of the intestines failed to show any paratyphoid organisms, which have been recorded as causing somewhat similar outbreaks. The infection had been well established before it was brought to our attention and the mortality was high with a loss of 67 foxes out of 89 on the ranch. An autogenous bacterin was prepared and its injection appeared to stop further losses. Broncho-pneumonia is the predominant symptom and post-mortem lesion.

It is to be regretted that we were not able to investigate the outbreak sooner when the bacterin could have been of use in keeping down the losses. Ranchers would be well advised to call in qualified assistance as soon as possible in cases of infectious disease. Once the infection becomes well established the difficulty in stopping its spread is more than doubled. Outbreaks may run their course and subside after the losses reach a certain maximum. In this instance the value of the prepared bacterin may be only an assumption.

Tuberculosis in a Wild Raccoon

History

Three wild raccoon were sent to the Fur Farm on May 28th (seizure No. 7,951—Legault). Three months later, on August 28th, one that had been in poor condition for some time died.

Autopsy

The carcass was in a generally poor condition, with a total absence of body fat, which is most unusual in this species of animal. The abdominal cavity was greatly distended with ascitic fluid. The peritoneum presented a par-boiled appearance. The stomach was found to contain numerous blood-sucking nematodes, later identified as *Physaloptera sp.* The lining mucosa was inflamed where the parasites had been attached. The outer wall of the stomach, omentum, and spleen were involved in a huge abscess-tumour formation. Intestinal lymphatic glands were enlarged and somewhat caseous. Lungs and heart were normal and showed no lesions.

Laboratory Diagnosis

A smear of the pus from the spleen was stained with Gram's method but showed up no pathogens. An acid-fast stain was also attempted for tubercle bacilli but none could be demonstrated. Blood agar culture plates were negative.

Animal Inoculation.—The possibility of tuberculosis could not be overlooked, so a guinea pig was injected hypodermically with an emulsion of the ground-up spleen in normal saline. On September 25th, the injected guinea pig died in an emaciated condition. The autopsy showed a perfect picture of miliary tubercular lesions throughout the entire intestinal organs and lymphatic glands. The spleen was enlarged and showed areas of caseation. The peritoneum was studded with a multitude of tiny tubercles. Acid-fast stain revealed the presence of long curved acid-fast bacilli. Culture was attempted on egg media but was unsuccessful. Two more guinea pigs were injected subcutaneously with an emulsion of the ground-up spleen of the dead guinea pig. One of these died on October 22nd, and showed lesions identical with the above. The mate was seen to be emaciated and likely to die so it was sent to Dr. Neil McKinnon, pathologist at the Connaught Laboratories, Toronto, for positive diagnosis and type determination.

The second guinea pig died on November 11th and was given for autopsy to Dr. M. H. Brown, who reported as follows:

> Inguinal lymph glands enlarged and caseous. Direct smear shows numerous long curved and beaded acid-fast bacilli. Greater omentum was a much enlarged mass of coalesced tubercles. Lesser omentum studded with small yellow-grey tubercles. Retroperitoneal glands enlarged and caseous. Spleen enlarged three times its usual size, red in colour and with large yellow necrotic areas. Smears from all lesions show acid-fast tubercle bacilli. Lungs were studded with isolated

yellowish areas 2 to 4 m.m. in diameter. Small tubercles present along the insertion of the diaphragm. Tracheo-bronchial glands enlarged and caseous when cut into. Smears show acid-fast bacilli. A small growth was successfully obtained on egg media after five weeks' culture.

Diagnosis.—Tuberculosis.

Type.—Not determined at date of writing.

Summary

A case of tuberculosis has been met with in a wild coon. The diagnosis was difficult but the inoculation of guinea pigs brought out the fresh lesions with more numerous bacilli. Infection may have been caused from eating a tubercular chicken or from being fed milk from a tubercular cow.

We wish to acknowledge the kindness of Dr. Neil McKinnon and Dr. M. H. Brown of the Connaught Laboratories for confirming the tuberculosis diagnosis and determination of the type.

Lung-Worm Pneumonic Bacterin

Secondary broncho-pneumonia following lung-worm parasitism is by far the most common cause of death in foxes sent to the Experimental Fur Farm for autopsy. Lung worms present in the trachea and bronchioles of parasitized foxes set up a continual irritation and the resulting inflammation thereby weakens the lungs. Foxes so affected are most susceptible to infections, and secondary pneumonia is a common sequence. Broncho-pneumonia or catarrh is the common clinical symptom of lung-worm parasitism. The severity differs from a slight bronchial catarrh to pneumonia involving the entire lung substance. It is noted that the number of cases received at the Experimental Fur Farm are increased during and following adverse weather conditions. Pup foxes have less resistance and will often succumb quickly, while affected adults may appear healthy except for the harsh bronchial cough. On certain ranches where parasitism with lung worms is heavy the owner may lose considerable numbers of pups each year from lung complications following lung-worm infection.

Routine bacteriological examination of autopsied lung-worm fox carcasses reveals that a number of organisms may be involved. Those commonly present include *Staphylococcus aureus* and *albus*, several streptococci, *Alcaligines bronchisepticus*, and *Escherichia coli communis*. Several other organisms may be included. *Staphylococcus* is the predominant organism. It is well known that staphylococcic bacterins give good results both as a preventative and in clearing up pus conditions. With this object in mind, bacterins were prepared containing large amounts of staphylococcus and in proportion the other organisms listed above. All were isolated from cases of secondary broncho-pneumonia or so called lung-worm pneumonia of foxes. Some 1,500 c.c. was prepared and given to nearby ranchers that have had trouble from lung-worm infections each year. The ranchers reported excellent results and several severe cases brought to the farm for treatment were kept over and treated with gratifying results.

The bacterin will not get rid of the lung worms and is not intended for that purpose. It will, however, clean up the pus condition that is usually present in the trachea and lungs. It is doubtful if the ordinary infection with lung worms alone will cause serious trouble to the fox. But it is the weakened condition of the lungs that leaves the animal susceptible to secondary infections that cause pneumonia and bronchitis, which often lead to death. The pneumonia is the real cause of death and not the lung worm. By cleaning up the existing pus condition the animal is enabled to breathe properly and to fight off the possible pneumonia. The danger of pneumonia is lessened and the fox is able to breathe without difficulty and may be tided over until pelting time.

Injections appear to be of great value in treating litters of pups that first show lung-worm symptoms. If the pups are kept healthy until the cold weather arrives, the danger of more lung-worm infection is lessened and by the next spring the fox is old enough to have developed a certain amount of resistance to the lung worm and as a rule will not show any further ill-effects. Fox pups that are known by feces test to have lung worms may be given one or two injections as a preventative. On ranches where losses from lung-worm complications run high each year it might be wise to inject all the pups several times each year.

Fox ranchers that have been given generous trial amounts of the bacterin are enthusiastic in its praise. They say that it is surprising how a sick fox will brighten up and its appetite increase after a few injections. Ranchers that have had serious losses each year with pups dying from lung-worm pneumonia report a marked lessening in mortalities. Affected foxes will soon breathe easily, increase in weight, and usually grow good pelts by fall. A few experimental cases brought to the farm responded to injections of the bacterin, and carefully checked cases reported from nearby ranches prove the value of autogenous bacterin injections.

It is to be noted that autogenous bacterins give consistently better results than stock preparations. That is to say if a rancher loses a fox from lung-worm pneumonia and brings in the fresh carcass, a bacterin may then be prepared that contains the special type of infection existing on his ranch.

Bacterins prepared from the organisms most commonly found present in the lungs and trachea of foxes dying from verminous bronchitis or so-called lung-worm pneumonia are found to be of great merit in cleaning up the pus condition in the lungs. Pneumonia that usually follows lung-worm infection may be treated effectively or prevented by its injections. Autogenous bacterins appear to be more efficacious than stock preparations.

SNUFFLES

This disease of rabbits appears to be more or less prevalent in many parts of the Province. In the future, should rabbit-raising become seriously commercialized, as is now the case in the United States, the disease would be of economic importance.

Snuffles has been studied over a lengthy period and our findings would correspond, in the main, to those already voiced by previous scientific workers. There are two forms of the disease, viz. the chronic or common type, which resembles a cold in the head, and a septicemia which causes death in forty-eight hours. We have found that chronic sore hocks, following an outbreak of snuffles, may be due to a latent infection localizing as abscess formations on the hocks and other locations. Snuffles is not hereditary as was formally believed by many rabbit breeders. The supposition has arisen from the fact that some healthy rabbits may harbour the snuffle organism in their nasal passages. They may, however, pass the disease to other rabbits or to their young after weaning, and this accounts for the failure of certain animals to raise healthy young and also for the repeated losses following an initial outbreak of the disease. As exposure to dampness and cold reduces their vitality, rabbits are more susceptible to snuffles in the late fall and early spring months.

Medicinal treatment is of little value in established cases. It would be advisable to immediately destroy the first cases rather than attempt treatment and risk the spreading of snuffles to other parts of the rabbitry. Following outbreaks any rabbits suffering from sore hocks or any does that repeatedly fail to raise healthy young should be eliminated.

Board Floors for the Prevention of Lung Worm

Board floors were first constructed in twenty pens at the Experimental Fur Farm in November, 1928. By that time, tests of the foxes showed that lung-worm infection was increasing and if left unchecked would likely become a serious problem. Periodical tests for the presence of parasites are carried out regularly as routine work at the farm. Preliminary tests of the first pups born from infected parents kept on board floors were so conclusive that twenty-four additional double pens were remodelled and board-floored in November, 1929. Of the fifty fox pens at the farm, all are now board-floored with the exception of three concrete and three gravel pens, which are kept especially for experimental work with parasites.

Construction.—First experiences show that the floor should be built with a decided slope and with the lumber laid lengthways with the slope. Boards should be straight-edged and laid close together. In time, the warping and shrinkage will leave a slight crack between the boards. Rapid and perfect drainage is thus provided. The floor should have a 6-inch drop in each 20 feet and should be so constructed as to leave plenty of space, at least 1½ to 2 feet, between it and the ground. This allows space for a good circulation of air under the floor and assists in the rapid drying out of the floor after a heavy rain. Most parasitic eggs require a certain amount of moisture for their development. It is the lack of moisture on properly constructed board floors that stops the lung-worm eggs from developing.

Four of the pens were floored in 1928 with lumber resting on 2- by 4-inch scantlings laid on the gravel bottoms of old pens. These pens were later found to be useless in the prevention of lung worm. Pups born here were found to be just as badly infested as those from infected parents born on dirt or gravel pens. Apparently the floor was too close to the ground and the moisture kept the floors in a state of dampness sufficient for parasitic development. Such floors do not dry out as rapidly after rains as is necessary.

Pups.—In 1929, a total of 53 pups were born to known infected foxes that had been placed in board-floored pens in November, 1928. These pups were raised to maturity on boards and showed consistently negative tests for lung-worm eggs throughout the entire year. Some of these pups were pelted that December and contained no lung worms. An exception is noted of twelve additional fox pups that were born from infected parents kept in the renovated pens where the floors were laid too close to the ground as mentioned above.

Thirty-nine pups were born to infected parents kept on board floors in 1930. They were also negative in every case for lung-worm eggs. These pups also showed a marked decrease in hook-worm infestation. Very few pups showed any hook-worm eggs throughout the entire four tests performed during the year. A number of these pups were pelted in December and autopsies revealed very few cases of hook worms and no lung worms, but round worms were still present in the pups that had not been wormed. Board floors do not appear to be of any appreciable value in preventing round worms.

Tests of Adult Foxes on Board Floors

Adults.—The above table illustrates the lung-worm tests of ten adult foxes placed on board floors in November, 1928. While only ten foxes are shown, the results are the same for the 32 foxes. Eight of the foxes were finally pelted and a post-mortem examination confirmed the tests and is also recorded in the last column. Positive test is denoted by "+" and negative for lung-worm eggs by "0."

Known infected adults were placed in board-floored pens in November, 1928. All of the 32 still tested positive in the spring of 1929. Tests during 1929 show that some few adults gradually became free of lung worms by November, but the majority were not clean until the spring of 1930. Two foxes still tested positive with a light infection in May, but were both clean by July of 1930. All the adult foxes still on the ranch that had been placed in properly constructed board-floored pens were clean by test in July, 1930. This applies only to the foxes continually kept on boards, as one or two foxes when testing clean were placed back in gravel pens and were reinfested within three months. Board floors stop reinfestation but the parasites then in the fox remain alive for some time. All the foxes were clean after a twenty months' continuous period on board floors. Hook-worm infestation is also at a minimum by this method of pen flooring. Examination of the carcasses of numerous foxes pelted this fall show a remarkably light hook-worm infection and no lung worm in foxes kept on board floors.

Concrete Floors.—Three pens were floored with concrete as an experiment to ascertain its efficiency in parasitic prevention. Pups born in these pens in 1929 were negative for lung worm. In the fall of 1929, a shade roof was constructed over the pens as they were thought to be rather hot for the foxes. In 1930, a total of 11 pups were born to infected foxes in these pens but all were found to be heavily infested with lung worm. Round and hook worms were also present in considerable numbers, which necessitated repeated pilling of the pups. Except for a few cases of round worms, none of the pups raised on board floors has been pilled since the floors were first constructed. Apparently the shade roof prevented the concrete from drying off as rapidly as was necessary. Enough moisture was left in the tiny crevices to give the required degree of dampness necessary for egg development. Perhaps if the concrete had been finished smoothly this would not have been the case.

Conclusion.—Board floors of proper construction will prevent lung-worm infestation in pups born from infected parents. Adults will in time clean up, but it takes about two years. Hook-worm infection is lessened, but round worms are not affected. Concrete floors are of questionable value.

INJURIOUS PARASITES

Autopsy findings invariably reveal one or more parasites in ranch-bred animals and also in those brought directly from the wilds. Some of these worms have little significance in adversely affecting the health of the host. Others are highly injurious and result in losses.

ARMED LUNG WORM OF FOX

This dangerous worm (*Crenosoma decoratum*) was found for the first time in Ontario in two red foxes forwarded to the farm directly from the trap lines. They were in poor condition and did not eat well, and a purulent discharge from the eyes and nostrils was observed.

On autopsy, lung worms were found in the trachea (wind-pipe) and deeper lung tissue. An area of inflammation with exudates of pus surrounded each individual worm. It is easily recognized, being shorter and much heavier than the common lung worm. The armed lung worm does not lay eggs, in the manner of the common lung worm, but deposits living larvae in the intestines of the fox. These pass to the ground, develop, and ultimately reinfect him.

The symptoms may be confused with some of the infectious diseases, and the fox should be isolated until a diagnosis is made.

The use of wire floors raised some two feet off the ground is advocated for treatment. This will allow the larvae-infested droppings to pass to the ground and at the same time prevent the fox from coming in contact with them. Single boards placed around the inside wall of the pen will allow the fox considerable scope for exercise and he will quickly learn to make use of them.

Laboratory Diagnosis.—The sugar or salt flotation test for the detection of worm eggs is not satisfactory for larvae. The best results are obtained with the Baermann isolation apparatus. If it is not available, the larvae can be recovered by sedimentation.

The feces are mixed with several times their volume in water and strained through a fine screen to eliminate the coarser elements, the sediment being allowed to settle. A small amount of the latter is taken up with a pipette and examined under the low-power microscope.

KIDNEY WORM

This worm (*Dioctophyme renalis*) has been found to be prevalent among wild mink in the vicinity of the Experimental Fur Farm. It has also been found in ranch-bred mink. Frequently a number of animals in the same ranch will be affected. During the trapping season, trappers have been good enough to send many carcasses to the farm. This has been of great help in studying parasitic conditions among wild animals.

The kidney worm must be considered as a very injurious one, and of much economic importance to the fur trade. It is easily recognized, being one of the largest of the round worms, ranging from 4 to 18 inches in length in the mink. It is blood-red in colour. The favourite location is the centre of the kidney, though we have found it, in mink, in the thoracic and abdominal cavity. Given time the worm completely digests the kidney tissue, which becomes a mere shell or capsule to house the worm. The worm is usually associated with a bony deposit.

The worm can sometimes be detected in the living mink; the enlarged capsule can be felt as an enormously enlarged kidney. Pen-raised mink infested with the worm may show a tendency to drag the hindquarters, and may become paralyzed. Fits, emaciation, and loss of appetite are also noticeable. The egg laid by the worm is ovoid in shape and dark-brown in colour and has a well-defined capsule. It can be recovered in the urine and occasionally in the feces through contamination.

Treatment for the elimination of the worm is not possible, owing to the location in the kidney. Prevention is, however, practicable and easily accomplished.

Prevention.—From evidence gathered this year, mink ranchers are advised to cook fish taken from sluggish waters for at least ten minutes in boiling water. The catfish appears to be a large factor in spreading the disease. The immature or larval form of the worm lives in freshwater fish at some stage of its existence and develops to maturity when swallowed by the mink. Of the many fish inhabiting sluggish streams we can only discriminate against the catfish species at the present time, though further studies may reveal that others carry the larval form of the kidney worm.

TAPEWORMS

The tapeworms (*Diphyllobrothrium latum* and *Diphyllobrothrium cordatum*) have not been considered a serious problem in foxes and have seldom been found in foxes sent to the Fur Farm for post-mortem. This year, however, they were found in forty-five examinations. Two species have been identified, *D. latum* and *D. cordatum.* The life cycle of *D. latum* has been fully worked out, and *D. cordatum* is in every likelihood similar.

In the fox they were from 2 to 14 inches in length according to the stage of development reached, and were found inhabiting the lower portion of the intestines. With minor differences, they are typical tapeworms, being flat and distinctly segmented.

It has been definitely established that the infection is acquired through eating fish, the final larval stage having been found in pike, lake herring, perch, and many others. If fish are eaten in the raw state, the young worms locate in the intestinal tract of the fox and reach maturity in from five to six weeks. It is altogether likely that in certain areas the fish are much more heavily infested than in others. If post-mortems are done on pelting foxes and they are found to be infested with these tapeworms it would be advisable to cook the fish in boiling water for ten minutes.

Treatment.—Arecoline hydrobromide given by the mouth was found to remove tapeworms in foxes. However, it should be kept clearly in mind that this is a dangerous drug, if not used with proper precautions. It should not be given to foxes suffering with heavy lung-worm infestation as it has a tendency to affect respiration. Normal foxes can tolerate a dose of 1/4 grain, but not more than 1/8 grain is recommended if lung worm is at all prevalent.

After treatment, the fox should be placed in a clean crate and the feces examined for the expelled tapeworm. This is best accomplished by stirring the feces in several times their volume of water. The tapeworms will be noticed in the disintegrated fecal matter.

PHYSALOPTERA SP.

Worms belonging to this genus are frequently found in raccoon, and from external appearances are very similar to the ordinary round worm. They chiefly occur in the stomach, where they attach themselves to the lining in large numbers. These worms are blood suckers. The lips are provided with "teeth" and produce a considerable irritation of the stomach wall.

If raccoon remain thin in spite of good feeding, the presence of parasites may be suspected. At the Fur Farm adult raccoons have been given 8 m.m. and kittens 3 m.m. of tetrachlorethylene without toxic results.

CROWN GAME PRESERVES

In the following list will be found the title, location, and area of the existing Crown Game Preserves in Ontario, as at December 31st, 1930:

Crown Game Preserve	Location	Acreage
Abbey Dawn	Frontenac county	300
Anderdon township	Essex county	1,200
Bobcaygeon	Victoria and Peterborough counties	1,700
Boyd	York county	300
Caverly	Elgin county	25
Chapleau	Algoma and Sudbury districts	1,824,000
Chippewa	Thunder Bay district	2,728
Cobourg	Northumberland county	200
Conroy marsh	Renfrew county	3,300
Darlington	Durham county	298
Dumfries	Waterloo and Brant counties	25,000
Dundas marsh	Wentworth county	2,750
Eden	Wellington county	1,470
Eugenia	Grey county	5,200
Falcon	Kenora district	15,000
Glendale	Wentworth county	450
Glen Elm	Halton county	325
Gloucester	Carleton county	200
Goulais River–Ranger lake	Algoma district	345,600
Hiawatha	Algoma district	160
Hope	Durham county	1,920
Hughes	Bruce county	400
Huron	Huron county	1,000
Innisfree	Simcoe county	400
Iroquois	Manitoulin district	150
Loch Garry	Glengarry county	6,400
Mallard lake	Grey county	100
Masonville	Middlesex county	6,500
Meadowvale	Peel county	300
Miner	Essex county	1,280
Mississauga–White river	Algoma	358,400
Nipissing	Nipissing district	155,500
Nopiming	Renfrew and Carleton counties	1,540
Nottawasaga	Simcoe county	1,200
Peasemarsh	Grey county	300
Peel	Peel county	2,400
Proton	Grey county	6,240
Puslinch	Wellington county	704
Richmond	Parry Sound district	56
Rockcliffe Park	Carleton county	500
Shirley bay	Carleton county	2,700
Silver lake	Norfolk county	3,100
Southwold	Elgin county	200
Sudbury	Sudbury district	15,500
Superior	Thunder Bay district	575,000
Township 82	Sudbury district	5,760
Toronto township	Peel county	3,000
Wilder lake	Grey county	4,000
Woodlands	Halton county	460
York	York county	115,000
Total		3,500,216

During the year the following were established: Goulais River–Ranger Lake, Mississauga–White River, Woodlands, and Cobourg. The first two are extensive areas set aside in the district of Algoma for the natural protection of game, birds, and fur-bearing animals, and will be organized along the lines of the Chapleau Game Preserve. It is anticipated that the results to be achieved from this action will, in the future, as in the case of the Chapleau Game Preserve, justify the creation of these two additional Crown Game Preserves.

In addition the townships of Medora and Wood, in the district of Muskoka, were closed during the year to hunting and trapping for a period of four years, continuing and extending a regulation of the previous year, which had closed these two townships for a one-year period.

Similar restrictions covering a one-year period were ordered for the township of Cardwell, adjoining Medora and Wood, in accordance with a request from the municipal authorities.

During the year, the Order-in-Council which established the Marmora Crown Game Preserve, in the county of Hastings, was rescinded at the request of the landowners involved, and this Crown Game Preserve ceased to exist.

In this connection all our reports are to the effect that not only sportsmen, but the general public as well, are realizing more and more the increasing value of these sanctuaries as places of refuge for our wild life, and the extent of the benefits to be derived by the surrounding country from the establishment of these Game Preserves. In cases where privately owned lands are involved, one can only be impressed with the splendid spirit of co-operation which is exemplified by the landowners concerned.

WOLF BOUNTIES

During 1930, the Department received applications for the payment of bounty on 2,551 wolves, which marked a considerable decrease compared with the total of the previous year, notwithstanding the provision which became effective during the year for the payment of an increased bounty where certain conditions as to the localities where the animals were taken could be complied with. As usual the large majority of the applications covered pelts from animals which had been taken in the extreme northwestern section of the Province.

Comparative Statement of Wolf Skins Received and Bounties Paid

	Timber	Brush	Pups	Total	Bounties
For fiscal year ending October 31st, 1926....	1,022	2,690	107	3,819	$51,994.42
For fiscal year ending October 31st, 1927....	1,041	4,414	59	5,514	82,970.07
For fiscal year ending October 31st, 1928....	1,231	4,878	64	6,173	91,297.27
For fiscal year ending October 31st, 1929....	1,165	2,389	34	3,588	53,495.13
For fiscal year ending October 31st, 1930....	1,070	1,458	23	2,551	38,074.77

ENFORCEMENT OF THE ACT

The enforcement of the provisions and regulations of the Ontario Game and Fisheries Act was performed in a very satisfactory manner by the field officers charged with the work. The service rendered by the District Superintendents and the Overseers under their respective jurisdictions was satisfactorily augmented during the spring and fall spawning and deer-hunting seasons by numerous seasonal overseers appointed for duty during these periods for the better protection of fish and game and enforcement of the Act.

In this connection we would like to take advantage of this opportunity to make favourable mention of the services rendered by the 358 parties who received appointments throughout the year as Deputy Game and Fisheries Wardens. These Deputy Wardens, many of whom are members of the Fish and Game Protective Associations of the Province, and all of whom are very much interested in the work of conservation and enforcement, as is evidenced by their willingness to act, accept the appointment without remuneration, and perform their services in an unselfish manner, rendering a degree of assistance and co-operation which it would be difficult to replace, and which is, as a result, very much, appreciated.

In 1,253 cases in which parties were charged with violations of fish and game regulations, convictions were secured, and fines and costs assessed, as set forth in the statement of revenue given in a previous section of this report.

In 1,635 cases, seizures of goods and equipment were made. A summary of the articles is as follows:

Pelts	4,019	Traps	1,885
Deer and moose hides	31	Fire-arms	552
Live animals	29	Gasoline boats	12
Fish ....lbs.	4,063	Row boats	18
Fish ....no.	1,277	Canoes	12
Gill nets ....pieces	186	Punts	15
Gill nets ....yds.	11,473	Tugs	2
Dip nets	35	Motor cars	7
Hoop nets	25	Jack-lights and lanterns	40
Seine nets	30	Deer and moose	24
Pound nets	11	Venison ....lbs.	1,229
Trap nets	10	Moosemeat .... “	864
Bull nets	20	Partridges	102
Bag nets	1	Geese and ducks	127
Hooks	1,561	Pheasants	23
Spears	87	Decoys	124
Rods and lines	97	Ammunition (rounds)	797
Creels	17	Miscellaneous	34
Fishing-tackle boxes	11		

In accordance with the usual practice, confiscated articles, except in those cases in which they were sold to the former owners, were disposed of by tender at sales which were given publicity and advertised in the press. Notice of these sales was also given through our district offices. The amount derived from these sales is shown in the statement of revenue included in this report.

REPORT OF THE FISH CULTURE BRANCH

The Biological and Fish Culture Branch, of the Department of Game and Fisheries for Ontario, was created officially in 1928, one of its functions being to effect the application of scientific findings, both Canadian and foreign, whenever possible and practicable, to fish culture and the fisheries of Ontario.

In recent years a vast amount of literature has accumulated on the subject, and that part which is the result of scientific enquiry is used to the best advantage. In other words, the general trend of the activities of the Branch is to conform to ideas substantiated by scientific facts.

Although there remains always that realm of deep-seated obscurity, difficult of penetration, nevertheless, as a result of patient and accurate experimentation in field and laboratory studies, our knowledge broadens. Biological findings cannot be forced and years may pass before we see concrete evidences of progress in certain phases of fisheries' investigations, since we are dealing with elusive creatures, in a medium different from our own and outside anything but our most indirect control. Furthermore, although the structure representing the work accomplished is never completed, we are constantly working up to an ideal, and the scientific attitude is reflected in the results achieved.

A perusal of the following report and previous reports will show that satisfactory and unmistakable progress has been made in the investigational and practical sides of fish culture.

THE STAFF

The Branch has openings for a limited amount of service of an investigational nature during the months of June, July, August and September, the permanent staff being responsible for the development and encouragement of research in fisheries throughout the year, either by the work of its own members or by referring research problems to other interested bodies, such as the Ontario Fisheries' Research Laboratory of the Department of Biology, University of Toronto, since the fisheries' research work of the latter is chiefly confined within the geographical boundaries of the Province of Ontario.

Every year a limited number of qualified men is available from the biological departments of the University of Toronto, Queen's University, Kingston, and the University of Western Ontario, London. In connection with seasonal appointments the attitude of the Branch is that only those who have the necessary qualifications for fishery investigations of a technical kind are fitted to undertake studies relating to the suitability of streams for fish-planting operations; the natural productivity of waters; the effect of natural and artificial barriers; the success or failure of former plantings and, if possible, the reasons therefor; technical studies regarding the culture of the different species of fish handled, for example, food, water supply, disease, etc.; and others too numerous to mention. "Necessary qualifications" may be taken to mean postgraduate studies of fishery topics and practical field experience in connection with scientific investigations; in other words, the correlation of experimental laboratory and field work. Investigators who have served one year or more with the Branch are encouraged to continue their field investigations and during an interim to pursue such fishery courses and problems as will enable them to fulfil their duties from year to year with an enlarged vision and knowledge of the subject and its literature.

The personnel of the seasonal field staff for 1929-30 was as follows:

Gordon A. Adams, M.A., Department of Biochemistry, University of Western Ontario, London.
Hugh D. Branion, M.A., Department of Biochemistry, University of Toronto.
William R. Cameron, third year Biological and Medical Sciences, Department of Medicine, University of Toronto.
I. L. Chaikoff, M.A., Ph.D., M.D., Departments of Physiology and Biochemistry, University of Toronto.
W. W. Cook, B.A., Department of Biology, Queen's University, Kingston.
John D. Detwiler, M.A., Ph.D., Head of the Department of Applied Biology, University of Western Ontario, London.
William L. Dibbon, B.A., Department of Biology, University of Toronto.
Howard J. Dignan, B.A., Ontario College of Education, Toronto (graduate in Biology, University of Toronto, '29).
Edgerton O. Ebersole, B.A., Department of Biology, Queen's University, Kingston.
A. C. Green, B.A. (Biological and Medical Sciences), University of Toronto.
Robert D. H. Heard, M.A., Department of Biochemistry, University of Toronto.
A. H. Louden, M.A. (Biology and Chemistry), Queen's University, Kingston.
P. L. MacLachlan, B.A. (Biology and Chemistry), Queen's University, Kingston.
H. S. Pearce, third year Honour Biology, University of Toronto.
H. J. Perkin, third year Physiology and Biochemistry, University of Toronto.

John Savage, third year Honour Biology, University of Toronto.
P. W. Smith, M.S. (Wis.), Department of Botany, University of Toronto.
George C. Toner, fourth year Biology, Queen's University, Kingston.

Five of the above are undergraduates, but it should be noted that four of these had one or two years' field experience in connection with fisheries' investigations.

During the year, the following qualified assistants entered the services of the Branch on a full-time basis, namely, Miss Margaret Wilton, B.A., '22, Queen's University, Kingston, as technical laboratory assistant; Mr. W. H. R. Werner, M.A. (Biology), '29, University of Western Ontario, London, as Assistant Biologist; and Mr. John Gall as Assistant Supervisor of Hatcheries.

BIOLOGICAL SURVEYS

Stream and lake surveys were organized, as in the previous year, according to districts supervised by District Superintendents, and the number of waters investigated in the Province from the standpoint of their present suitability for fish-planting operations, which depends on their physical, chemical and biological characteristics, and possible productivity from a game-fish or fishery standpoint was two hundred and thirty-seven.

The following comparative statement of waters studied indicates the progress that has taken place since the inception of a biological component in the organization of the Department:

Year	Number of waters studied	Number of investigators
1925	21	1
1926	58	2
1927	233	5
1928	707*	9
1929	214	18
1930	237	18
Total	1,470	

*See report for 1928.

It should be remembered that the above figures do not include special studies on certain phases of fisheries' problems.

With the exception of the Thames and Grand River systems, biological surveys have been confined to individual lakes or streams and to counties and townships. When this preliminary pioneer work is completed, more comprehensive watershed surveys will be in order.

FISHWAYS

During the past two seasons, fifty-nine investigations were made of dams and other barriers across water-courses to determine the extent to which they might obstruct or prevent the free movements of fish and particularly their migration during the spawning seasons.

Recommendations were based on the principles set forth on pages 18 and 19 of the Annual Report and in the section on "Fishways" on pages 51 to 53 in the "Report of a Special Committee on the Game-Fish Situation, 1928-30."

It was pointed out in the Annual Report for 1929 that fishways are not always practicable, their practicability depending on the height of the dam or falls, conditions in lower and upper reaches respecting the same, and the species of fish affected.

In order to determine by comparisons whether the construction of the standard fishway, shown on the insert facing page 32, might be improved upon or revised, illustrations and plans of fishways in use in the United States and Canada and information on their success or failure have been collected and are being carefully studied.

UNIFORM REGULATIONS ON THE GREAT LAKES

Although there may appear to be no definite outcome of the third conference on uniform regulations on the Great Lakes, which convened at Lansing, Mich., December 5th, 1928, it was understood that each of the states concerned is making studies of various aspects of the problem similar to those being carried on by the Province of Ontario pertaining to the species of fish requiring protection by size limits, closed season or closed areas, and mesh of net. Biological studies of each phase of the question require considerable time, and when sufficient data have been collected and the results noted, another general conference may be warranted.

On Friday, December 20th, 1929, a conference between State of Michigan and Province of Ontario officials was held in Room D, East Block, Parliament Buildings, Toronto, with reference to Lake Huron fisheries. The following were present:

Wm. H. Loutitt, Chairman, Department of Conservation, Grand Haven, Mich.
Geo. R. Hogarth, Director, Department of Conservation, Lansing, Mich.
F. A. Westerman, Fish Division, Department of Conservation, Lansing, Mich.
Chas. J. Allen, Fish Supervisor, Commercial Fishing, Department of Conservation, Cheboygan, Mich.
Dr. John Van Oosten, in charge Great Lakes Investigation, U.S. Bureau of Fisheries, Ann Arbor, Mich.
Wm. J. Lambert, Secretary, Commercial Fishermen's Association, Bay City, Mich.
J. A. Rodd, Director of Fish Culture, Department of Marine and Fisheries, Ottawa.
D. McDonald, Deputy Minister, Game and Fisheries, Ontario.
J. Farrington, Assistant to Deputy Minister, Game and Fisheries, Ontario.
H. H. MacKay, Director of Fish Culture and Biologist, Ontario.
A. W. McLeod, Supervisor of Hatcheries, Ontario.
J. T. Simpson, representing Lake Huron and Georgian Bay Fishermen's Association.

The conference dealt chiefly with size limits of fish and mesh of nets, in order to find a basis of uniformity for the State of Michigan and the Province of Ontario on Lake Huron. The proposals continue to be subject to enquiry.

POLLUTION

During the year studies were carried out on suspected polluted stream or lake areas at the following centres: Sarnia, Chatham, Bridgeport, Burlington bay, Bridgeburg, Lindsay, Peterborough, Midland, Huntsville, Sturgeon Falls, Timiskaming, Haileybury, Timmins, Iroquois Falls, Smooth Rock Falls, Kapuskasing, Sault Ste. Marie, and Kenora.

In these studies standardized field methods were used for the purpose of satisfactory comparisons. The studies included determinations in lineal series above and below the source of suspected pollution, as follows: Water analyses,[1] for dissolved oxygen (Nessler's method); dissolved carbon dioxide; alkalinity; total acidity; pH (Standard Colorimetric Method); plankton, qualitatively and quantitatively, using the Juday plankton net; bottom fauna, using the Ekmann dredge; character of the aquatic plants, emergent and submerged types; the fish present in the various zones chosen for study, obtained by use of suitable gill nets, seines, or dip nets.

The conclusions from the investigations may be briefly summed up as follows:

1. Water samples taken from four waters suspected of being polluted showed severe oxygen reduction, six showed slight oxygen reduction, and seven showed no oxygen reduction.

2. In one case the pH showed an extreme lowering to the acid side of neutrality.

3. Pollution planktonts such as certain infusoria, namely, *Paramoecium, Colpidium, Carchesium*, and *Vorticella*, and the amoeboid protozoan *Difflugia*, and the flagellate *Euglena viridis*, were not present excepting in one instance, at Iroquois Falls, where *Vorticella* occurs frequently in pulp and bark polluted waters The amoeboid protozoan, *Arcella vulgaris*, was also found frequently in this instance. The latter is usually found on bottom sediments or adhering to decomposing plants.[2]

Plankton studies in the waters of the Winnipeg river by Mr. R. A. McKenzie, formerly Field Investigator for the Department of Game and Fisheries, appear to show some relationship between plankton and the amount of waste matter, qualitatively and quantitatively. The same condition appears to hold for the waters examined at Iroquois Falls.

The rotifer *Anuraea* considered by Purdy[3] to be a clean water organism was found in every case where the plankton was examined.

4. The presence or absence of bottom organisms appears to be the best general index of pollution or contamination. *Chironomus plumosus* and *Ascellus sp.*, forms tolerant to a reduced oxygen supply, occurred in three instances.

5. Vegetation was definitely discoloured or killed in eight instances.

6. Fish were killed in two instances, namely, carp at Bridgeburg and suckers, bass, and catfish at Bridgeport.

7. Where definite steps had not been taken by industrial plants to remedy existing pollution, practical recommendations were suggested. It would appear that one solution for controlling wastes of organic, chemical, or mechanical types is the economical utilization of the wastes by the industries concerned.

SPECIFICATION FOR STANDARD FISHWAY WITH 10-FOOT HEAD

The fishway or fish-ladder shown on the accompanying plan has 9 pools for a 10-foot head, which may be multiplied to surmount any desired height.

Each pool is 1 foot 1¼ inches higher than the one below, 5 feet 6 inches wide, 6 feet 6 inches long on one side and 4 feet 6 inches long on the other. The opening in the bulkheads between pools should be about one foot square at the lower pool, increasing in size toward the upper level to insure a waterfall over the bulkhead, the amount of increase depending upon the leakage.

The fishway including bulkheads should be built out of 3-inch timber and framed on 4- by 4-inch cross-beams and 2- by 4-inch cleats, with 6- by 6-inch posts, centres 5 feet 6 inches, braced at the top with two 2- by 6-inch timbers. The whole fishway is supported on 4 stringers, 4- by 10-inch timbers. The whole structure to be supported on mud sills, 5 feet 6 inch centres, or timber bents, 11 feet centres, according to the profile of the ground.

TIMBER:

The timbers should be cedar, fir, or pine. Timber bents, mud sills, and 4- by 10-inch stringers should be dipped in first quality creosote oil.

CONSTRUCTION:

The fishway should be constructed according to the details shown on the drawing, the workmanship to be first class in all respects.

NOTE:

The fishway may be constructed either in timber or concrete. It is important, however, that the lower end of the fishway be so placed that the entrance to the stream shall be at a point where the fish in ascending the stream would find an entrance in a manner similar to natural conditions in an open stream.

Provision for screening out fibrous materials, or filtering harmful substances, or ponding in case of effluents containing harmful substances for the purpose of precipitating them or aerating the effluents, is recommended in each case where necessary. It should be remembered, however, that the actual structure of such devices or research along these lines is the work of mechanical engineers as well as biologists.

Under the direction and supervision of the Director of the Branch, the majority of the field examinations were made by Mr. H. J. Dignan, B.A., Instructor, Port Hope High School; and Mr. P. W. Smith, M.S. formerly of the Department of Botany, University of Toronto.

Removal of Coarse Fish

Numerous applications are received annually to remove coarse fish from public waters, presumably with the idea of bringing about a more natural balance between game fish and non-game fish, thus lessening food competition to the advantage of the former. The attitude of the Fish Culture Branch towards this subject is, in general, the same as that outlined in the preceding report of the Department. The views of the Special Committee on the Game-Fish Situation, 1928-30, coincide with the conceptions of the Department in this respect.

For a number of years the Department has authorized the removal of pike (*Esox lucius* Linnaeus) from the Nipigon river for the purpose of giving the native speckled trout, for which the river is famous, a better chance to survive. Although the species in question may be protected in certain localities, its removal from trout waters is amply justified.

Gar pike (*Lepidosteus osseus* Linnaeus) and dogfish (*Amia calva* Linnaeus) are of little value as food and are known to eat the more useful kinds. These are subject to removal from game-fish waters.

The removal of the carp and ling from game-fish waters, and their control in all waters, is our objective.

At the present time the carp has a definite commercial rating. In any waters to which it has access it rapidly multiplies, particularly on account of its excessive fecundity and rapid rate of growth. It competes with bass and other game-fish varieties which subsist on insects to some extent. It is not of any great importance as a forage fish, excepting in the fingerling stage, on account of its rapid rate of growth. It has a habit of roiling the water in areas where it dwells, and for this reason it is an unfavourable species in waters frequented by clear-water-loving kinds, such as bass. For these reasons, it is highly undesirable. The spread of carp in inland waters and in the inshore waters of the Great Lakes is a prelude to the use of implements of capture such as seines, which wrought havoc to game-fish; and means of preventing the introduction or increase of carp in game-fish areas for this and other reasons cited, are adopted.

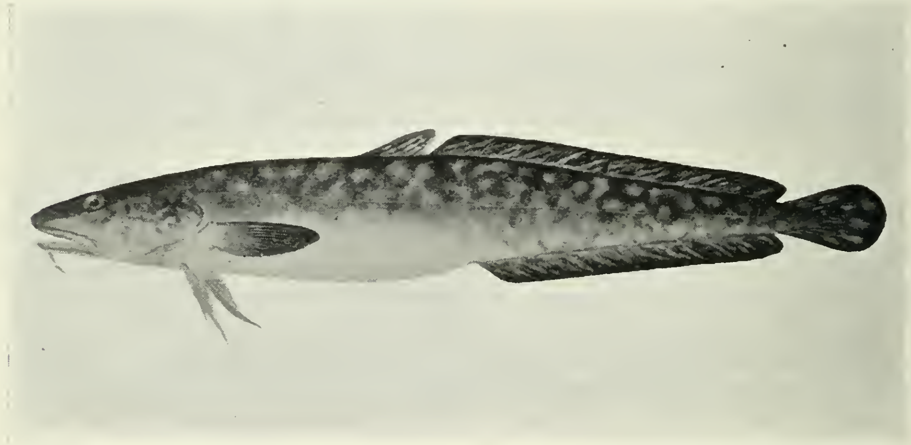
The ling (*Lota maculosa* Le Sueur) is the only member of the cod family found in fresh water. It is widely distributed throughout the Great Lakes and in the larger lakes of Canada and of the northern states of the United States. Its average weight is somewhere in the neighbourhood of from two to five pounds, but specimens weighing ten pounds are not uncommon. It may be caught with the usual implements of capture used for whitefish, herring, and lake trout, such as gill nets, hooks, and pound nets. It very often does considerable damage to fishermen's gill nets.

The food of mature ling consists of pike, perch, pike-perch, and ciscoes. It is claimed that they follow whitefish to their spawning grounds and destroy their spawn, but this has not been proved to the extent of the damage usually ascribed to them in this respect.

The possibility of establishing a market for ling has been before the Department for some time. As a result of careful experimentation, it has been found to be a palatable fish; and if a market could be secured after a thorough educational campaign pointing out its value and suitability as food, this would doubtless be the best way of ridding our lakes of excessive numbers of this species, to the advantage of the lake trout, with which it competes directly, and of more desirable species, such as pike, pike-perch, perch, herring, and whitefish, upon which it preys.

During the past few years, Mr. Hugh D. Branion, M.A., of the Department of Biochemistry, University of Toronto, and others have been making a thorough study of the possibilities of ling (burbot) as food, fertilizer, and a source of liver oil; and during the summer of 1930, Mr. Branion's services were secured by the Department to make a study of the possibilities of placing ling on the market as a wholesome and desirable food. The following is a section of Mr. Branion's report submitted to the Department, which may be published in popular form later:

Courtesy of Royal Ontario Museum of Zoology.



Ling or burbot (*Lota Maculosa* Le Sueur).

There are three possible ways in which burbot may be utilized, first as food, secondly as fish meal or as fertilizer, and thirdly there is the possibility of using its liver and liver oil. From an economic viewpoint the utilization of burbot as edible food is the most important. The qualities of this fish as food have been in dispute for years. Until recently the concensus of opinion in America has been against it. There is no doubt that popular prejudice has been built up against burbot because of its repulsive appearance. The fact remains, however, that the European burbot is considered a "delicately flavoured fish" with an excellent market. The liver and roe have always been considered delicacies. In the United States, through a campaign conducted by the Bureau of Fisheries, a market has been established. During the Great War burbot was to be found on the Canadian markets, but as soon as the scarcity of meat was alleviated no further attempt to continue the market was made.

In 1928 cooking experiments were conducted in the Department of Household Science of the University of Toronto by Miss Margaret Templin under the direction of Dr. A. Willard and the writer. Miss Templin reported that fried burbot was "quite palatable, tender, juicy, and had a delicate flavour." Fish loaf made from boiled burbot was "just as edible as that made from cod." She also made fish cakes from burbot and reported that they had "a fresh, delicate flavour and were as good as, or superior to those made from cod." However, in view of its repulsive appearance she considered that burbot in its "natural" state could not be commercialized successfully, but "if it were filleted and sold under a trade name there is no reason why, through its fine flavour and texture, it should not become very popular."

Burbot was also sent to various homes in the city where several methods of cooking were used by the housewives, including baking, frying, broiling, and steaming. In some cases the fish were filleted and made into special dishes. All reported that the fish was very tasty.

There is also the possibility of creating a market for burbot livers. They are of large size, being about 10 per cent. of the round weight of the fish. Excellent recipes for the canning and cooking of burbot livers served as soups, toasts, liver loaf, and as fillings for tomatoes and so on, have been prepared by Dr. A. Marlatt of the Home Economics Department of the University of Wisconsin. Investigations into the effect of burbot livers in dietaries, with particular regard to pernicious anaemia, are being carried on in the Toronto General Hospital.

Miss Templin has shown that burbot roe is a delicacy. To quote her words, "and this when placed on hot buttered toast and seasoned, seemed as attractive as any roe. Thus the roe of the burbot which occurs in great abundance, might be used to as great an extent as any other."

This brought to an end what might be termed the experimental stage in the utilization of burbot. This summer . . . the Fish Culture Branch, of the Department of Game and Fisheries, made possible the next step—the utilization of burbot on a commercial basis. Realizing the importance of this problem and the necessity for government assistance in its continuation . . . made it possible for the writer to make a survey of the available supply of burbot in the Great Lakes and to look into those local markets where burbot was sold, in an attempt to decide which method of handling is most feasible. At the same time the co-operation of the Great Lakes' fishermen in creating a market was obtained.

Burbot, cleaned and skinned, were supplied to various hotels and restaurants in Toronto. Their chefs were asked to cook these fish and to forward their opinions to the Department. The following quotation from one of these expressions of opinion will serve as an example of their conclusions, "The burbot which you sent me were excellent and compare very favourably with any fish which I have obtained from the wholesalers." It is obviously possible, therefore, to put burbot on the market as edible food. To avoid the disadvantage of its repulsive appearance it will be necessary to skin the fish, but this can be done easily and rapidly. A pamphlet containing a short account of the history of burbot and recipes for the serving of burbot as food is now being prepared. Plans for its marketing . . . are being considered.

Other than the backbone, burbot is boneless and excellent fillets can be made from it. It can be salted as ocean cod is salted and is equally good. Burbot can also be pickled or preserved as "strip fish" and in some instances has been smoked successfully. Frozen fillets made by rapid brine freezing as developed by the Biological Board of Canada would be a means of preserving any surplus.

Fish meal was made from burbot by Mr. W. Stewart of the Atlantic Fisheries' Experimental Station and on chemical analysis compared favourably with commercial fish meal. It seems safe to predict a movement for the manufacture of by-products, such as fish meal, in the Great Lakes' fishing industry. This would be one method for disposal of burbot.

Since the burbot is a relative of the cod, it was considered that the liver oil might serve medicinally as cod liver oil. The therapeutic effect of cod liver oil lies in its content of two fat-soluble vitamins, A and D, which are necessary for normal growth, for the formation of good teeth and bones and to aid the body to resist infection. The writer extracted oil from burbot livers by the direct steam method, which is now generally used in the manufacture of medicinal cod liver oil. The yield, colour, and taste of the oil compares very favourably with cod liver oil. The vitamin A potency of the oil, tested biologically, is about 500 units per gram or better, and compares excellently with medicinal cod liver oil obtained in the open market. The vitamin D potency of burbot liver oil was also shown to be as good as, if not better than medicinal cod liver oil. Dr. Marlatt, at about the same time, working at Wisconsin, reported that, "burbot liver oil may be classed with cod liver oil as an excellent source of the antirachitic vitamin". . . .

The prospect for future marketing of burbot looks bright and without doubt this fish can be turned into a source of profit to the fishermen. Its edible qualities can no longer be disputed, and as an added source of profit the liver oil might be manufactured while the liver itself may find a profitable market.

The Cinderella of the Fish World, disguised because of its homely appearance, should take its proper place among the recognized profitable commercial fish.

Annually the Branch receives numerous representations to remove blue-gills, perch, rock bass, calico bass, and catfish, and also rare requests to commence culturing the same by artificial or semi-artificial methods. It is sufficient to say, and this is equally true of all species, that they should not be removed until a very thorough biological study of each situation warrants such a course. A glance at the Fourth Biennial Report, 1927-1928, Conservation Department for the State of Michigan, and the Twentieth Annual Report, State of New York

Conservation Department, shows that the culture and distribution of one or all of the above species are being carried on. This indicates with what care and discretion their removal should be exercised and controlled. Fortunately their culture is not required at the present time in Ontario, but in order to avoid such a circumstance their exploitation commercially or otherwise is being prevented.

Pound Netting in Lake Erie

A second season was spent in studying the pound-net situation in Lake Erie in order to determine the mesh of netting in the crib which would release the largest number of immature fish, which would reduce or entirely eradicate the sorting of fish, that is, the legal from the illegal-sized, and which would prevent gilling of legal-sized fish in the crib or retainer.

Seven experimental nets were set, and each of these was controlled on either side by a commercial net in current use, that is, one having a 2-inch mesh throughout the crib. In each case, the experimental nets were the same as the commercial nets, with the exception that each of the former had twine of varying mesh set in the backs of the cribs, namely, 1¾-inch, 2¼-inch, 2½-inch, 2¾-inch, 3-inch, and 3¼-inch. One crib was made up of mesh similar to that used in the back and sides of the trap nets in the State of Ohio and instituted by law for 1929. This was done merely for comparative purposes and not with the remotest desire or object of recommending such nets for the Canadian portion of Lake Erie.

Each day an accurate record was made of the fish retained in the cribs of the seven experimental nets and the eighteen controls as follows: *species*, *weight*, *size*, *number*, *percentage gilled*, and *total catch*. The daily records were arranged diagrammatically so that each record corresponded to the position of a net relative to each of the others.

The measurements given above are for new twine. When the twine is tarred and subjected to the action of water it shrinks from 18 to 25 per cent. The true size of the mesh when in use was, however, recorded.

Until the results are gone over very carefully, no definite conclusion can be stated, but it would appear that a 2¾-inch mesh in the crib is the most satisfactory from the standpoint of the preservation of immature fish. On the other hand, a minimum number is gilled in the 1¾-inch and 2-inch mesh; but these meshes retain fish of all sizes, and the sorting of fish with its innumerable abuses creeps in. A crib which allows immature fish to escape and thus provides a minimum sorting is looked upon with favour by the Fish Culture Branch.

Investigations on the Georgian Bay

During the past summer our investigations on the Georgian bay centred around (1) the use of lake trout hooks by commercial fishermen and their detrimental effects, if any; (2) the justification for establishing new lines protecting inshore waters and prohibiting commercial fishing in the areas enclosed by such lines; (3) the effect of the operation of pound nets on the south shore of Georgian bay on game fish and commercial fish, such as lake trout, which are prized by anglers in that section.

Without more complete findings it is impossible to state that licensed trout hooks are taking an undue proportion of immature trout. It is also impossible to state at this juncture whether bait fishermen engaged in hook fishing are damaging the food supply of the trout by removing quantities of bait-fish.

Investigations in regard to the establishment of new lines protecting inshore waters and prohibiting commercial fishing in the areas enclosed by such lines show (1) that areas already closed should not be interferred with, since the factors which caused their closure are still in operation; (2) that a line on the south shore of the Georgian bay would act as an effective spawning sanctuary for commercial fish, such as lake trout, game fish, or any variety sought after by anglers, and would also provide a spawning sanctuary for pike, maskinonge, and pickerel in the southeastern section of the bay; (3) that an extension of the present closed area on the northeast shore, if extended outwards and in a northwesterly direction to take in the inshore waters of the north shore, would act as an adequate spawning area for whitefish, pickerel, and bass.

Fishermen operating in such areas have certain claims which would require a hearing and remedial measures.

International Convention of Game-Fish and Conservation Commissioners

The twenty-fourth annual convention of the International Association of Game-Fish and Conservation Commissioners convened at the Royal York Hotel, Toronto, August 25th and 26th, 1930. Mr. Hoyes Lloyd, of Ottawa, presided over the meeting.

Many interesting papers were presented by representatives of the states of the United States and the provinces of Canada, and constructive suggestions were offered and ideas exchanged regarding many phases of conservational problems, including the rearing and distribution of game birds and the protection, winter feeding, and habitats of game animals.

Sixtieth Annual Meeting of the American Fisheries' Society

The sixtieth annual meeting of the American Fisheries' Society convened at the Royal York Hotel, Toronto, August 27th, 28th, and 29th, 1930. Dr. David L. Belding, of Boston, Mass., the president, presided over the meeting with the late Mr. Carlos Avery, secretary and treasurer.

An address of welcome was tendered by the Honourable Charles McCrea, Minister of Mines, Game and Fisheries for Ontario.

On Wednesday, August 27th at 12.30 P.M. the members of the American Fisheries' Society were guests of the Province of Ontario at a luncheon at the Royal York Hotel and during the afternoon and evening at the Canadian National Exhibition.

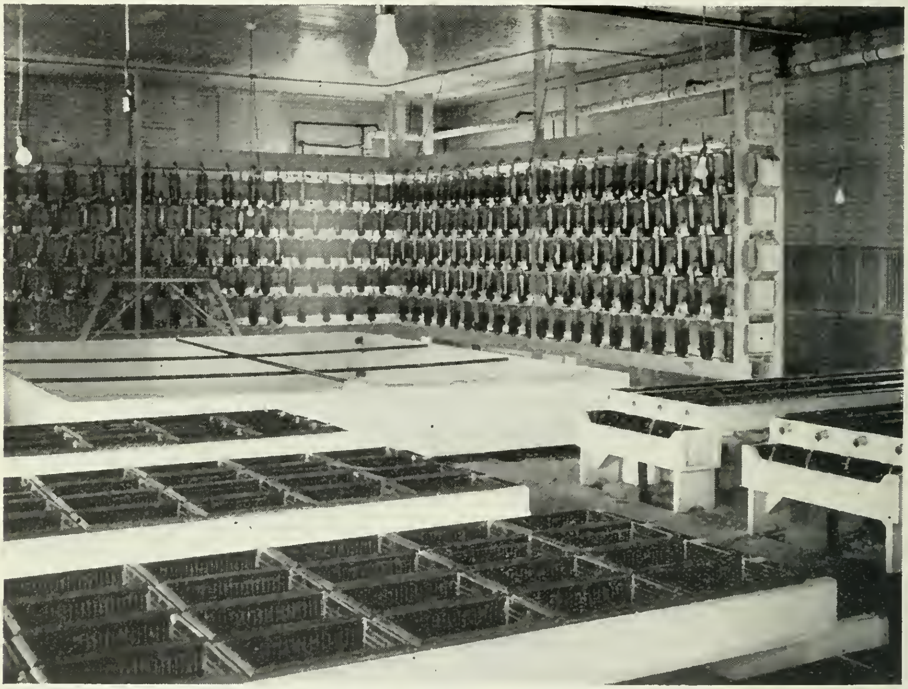
Numerous papers were presented at the meeting under the following major headings: Fish Culture, Nutrition, Diseases, Research, Pollution, Commercial Fisheries, and Miscellaneous Subjects. In all, forty-eight papers by authorities were listed on the programme, but only thirty-seven were read and discussed, the remainder being read by title on account of the absence of the authors.

The meeting was well attended by representatives of the majority of the states of the United States and the provinces of Canada. The following institutions or agencies in Canada more or less directly concerned with the theory and practice of fish culture and fishery problems were represented: the Biological Board of Canada; the Department of Biology, University of Toronto; Department of Marine and Fisheries for Canada; and the Department of Game and Fisheries for Ontario.

The following papers were presented by officials and seasonal investigators of the Biological and Fish Culture Branch, Department of Game and Fisheries, Ontario: (1) The Present Status of Fish Culture in Ontario; (2) Thirty-six Years' Experience in Fish Culture; (3) Investigations on the Nutrition of Speckled Trout; (4) Pollution Problems; (5) The Marketing of Ling (Burbot).

The next meeting of the Society will be held at Hot Springs, Arkansas, September 21st to 23rd, 1931.

In order to avoid any possible overlapping of fisheries' investigations carried on by the Ontario Fisheries' Research Laboratory, Department of Biology, University of Toronto, and the Biological component of the Department of Game and Fisheries, officials of both departments held a meeting on March 31st, 1930, to discuss the various problems undertaken with a view to more direct co-operation along such lines, and the application of scientific findings to fish culture and the fisheries of Ontario. The meetings will be held biennially.



A section of the interior of the Ontario Government Hatchery, Kenora.

Fish Culture

It is not difficult to conceive of so many anglers on a body of water, that natural production alone cannot support good fishing. Since restriction of the number of anglers is next to impossible, re-stocking and restrictions on size limit, bag limit, and season are the only possible solvents, and it is believed that artificial propagation as carried out by the Biological and Fish Culture Branch of the Department, that is by co-operation between science and practice, will continue to yield progressively fruitful results by maintaining the fisheries of Ontario and increasing its usefulness.

In 1926 the Province had seven hatcheries (including Port Carling) devoted to the propagation of both game and commercial fish, and in 1926 eight additional hatcheries located in the Province under the control of the Dominion Government and used exclusively for the propagation of commercial fish were taken over. Since then a number of these hatcheries have been used for the propagation of game fish, and in this connection it should be noted that Provincial hatcheries under Provincial jurisdiction were the first to go into the propagation of game fish extensively, that being their original objective. The work in this connection was limited to the culture of game-fish fry and early fingerlings until the establishment and development of the Normandale trout ponds opened the way for the culture of large trout fingerlings in raceways suitable for the purpose.

At present the Department's holdings include sixteen hatcheries, five trout-rearing stations, and two large bass ponds. These ponds, as well as the series at the Mount Pleasant hatchery, are used for the propagation of small-mouthed black bass.

A section of Codrington Trout-rearing Station.

The construction of four trout-rearing stations, in addition to the Normandale trout ponds, was commenced during the year; and in 1930 three of these were used for the culture of trout to large fingerlings. These rearing stations are located at (1) the headwaters of Coldwater creek, near Sault Ste. Marie, district of Algoma; (2) deep-seated springs, Petawawa township, near Pembroke, Renfrew county; (3) headwater springs supplying Marsh creek, near Codrington, Northumberland county; (4) headwater springs supplying Gibson's creek, Provincial Government Reforestry Farm, Charlotteville township, Norfolk county.

In addition a large trout-rearing station is now under construction at the headwaters of Spring creek near Dorion, Thunder Bay district.

The greatest care was exercised in making each site an individual subject of study from all angles. All of the sites chosen are accessible, so that speedy transportation by truck and rail may be effected.

The water supply at each station varies, being most voluminous at the trout-rearing stations at Dorion and Sault Ste. Marie. In each case the quality of the water, physically, chemically, and biologically, is highly satisfactory.

The development of trout-rearing stations is the outcome of a great and insistent demand for more and larger fish; and in the populated districts where waters are more heavily fished, the consistent introduction of large fish appears to be the only practical means of maintaining good fishing. A glance at Appendix No. 4 shows that the general trend in the culture of trout is in this direction, but it should be noted that there is not yet sufficient scientific evidence of a quantitative nature on the survival of deposited fry to discredit their introduction in suitable small tributary streams.

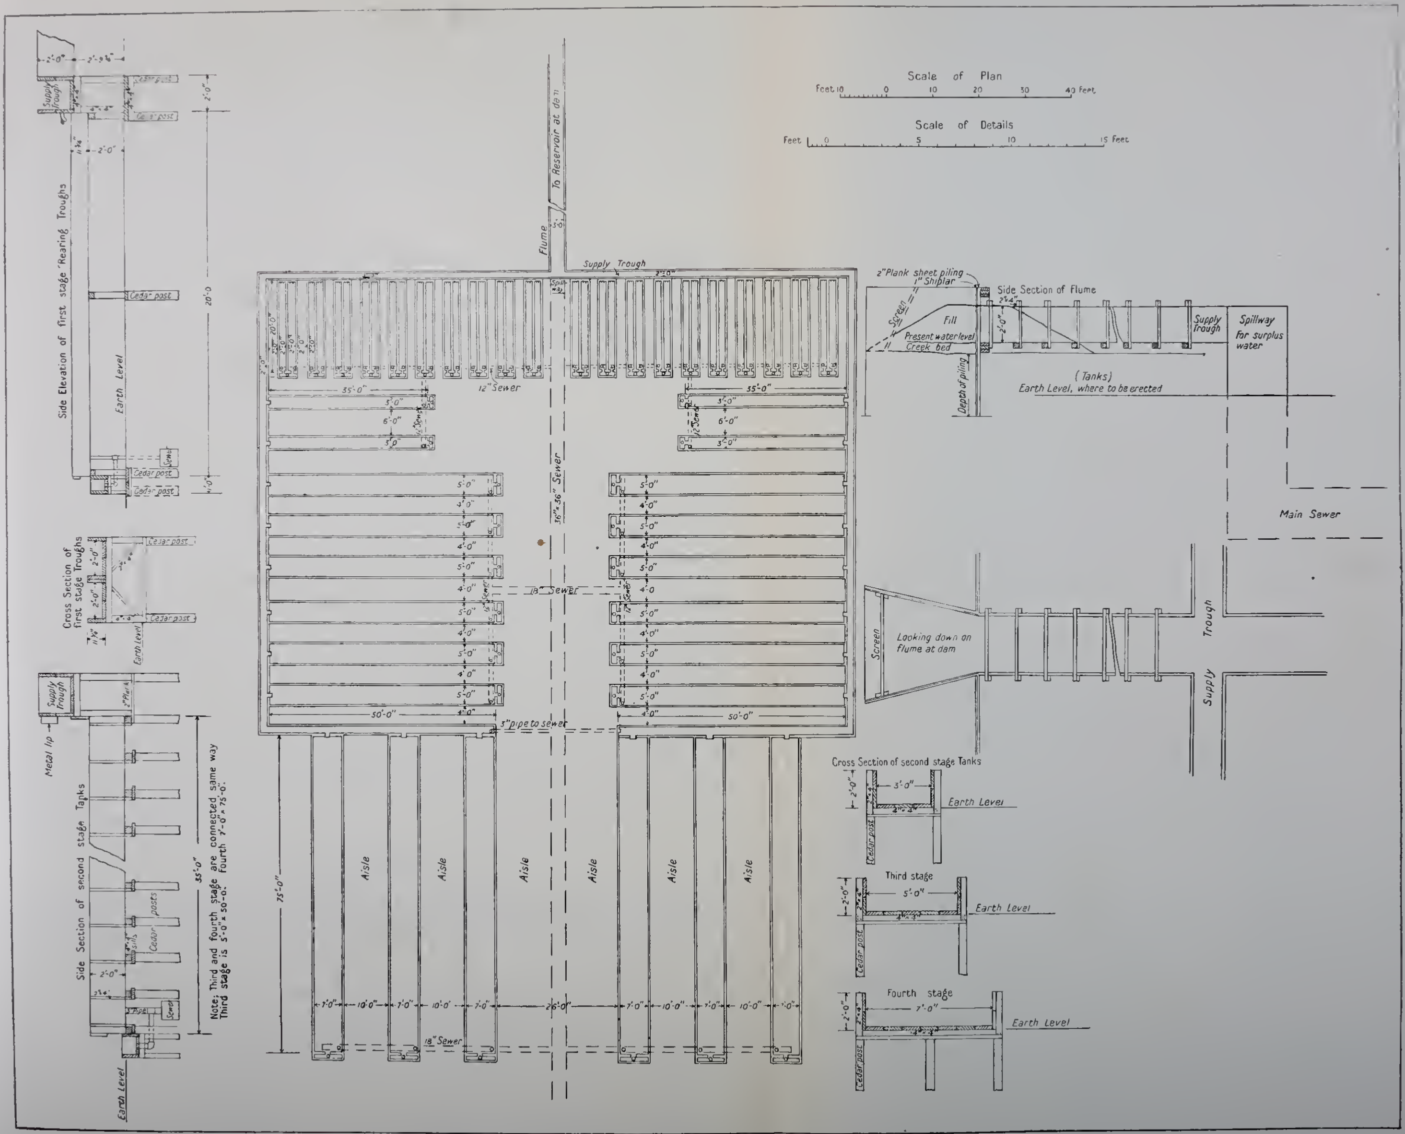
Yearling speckled trout, Normandale trout ponds.

The establishment of District Rearing Stations is, we believe, a step in the right direction, for two reasons at least:

1. Long-distance hauls are curtailed or eliminated. This is important economically and also from the standpoint of the health and vigour of the fish on arrival at their destination.

2. Trout are being reared in waters which flow over or through the same rock formation as waters in which the fish will be ultimately introduced, provided the waters are suitable biologically.

This method, though reasonable from the standpoint of transportation and protection of trout from injury due to long hauls and from sudden change in the reaction or chemical content of the water as opposed to that in which the trout were reared, may not be of any significance as regards the possibility of the fish surviving in waters differing widely in chemical composition, as shown in comparisons made of a number of waters supplying hatcheries located in the various types of rock formations.



Plan of Upper Part of Sault Ste. Marie Trout-raising Station

The analyses indicate (1) that sedimentary rocks contain a higher mineral content than igneous rocks, Mount Pleasant waters being the richest on account of the fact that the artesian wells, from which a certain amount of the water supply is obtained, flow through rocks heavily impregnated with calcium and magnesium salts; (2) that the water supplies are practically free from albuminoid substances and are, therefore, free from pollution; (3) that, although there is a very great difference in the chemical content of the water, speckled trout are able to endure any of these conditions and thrive satisfactorily; (4) that the number of fish produced at each station, per cubic foot of water, may differ widely and should be determined.

The process of carrying the fish through the complete cycle from the egg to the adult stage is possible at the Normandale trout ponds and is a principle which has received the support of many leading fish culturists. At the Normandale trout ponds, from acclimatized and domesticated trout, the Department obtains the largest proportion of the trout egg supply for the hatcheries. The Department plans to incorporate this same method in the District Rearing Stations whenever and wherever practicable, and this will lead to the decentralization of Normandale as the only and major source of fertilized trout eggs from domesticated stock.

The diagrams and photographs inserted in this report indicate the general principles of rearing-station construction. The raceways are constructed so as to take care of a graded stock, fry being retained in the smaller raceways until they are feeding well, when they are transferred to larger raceways. This structure is basic to general hatchery principles, the small raceways simulating the natural running feeders and streams in which trout fry live in a state of nature. The raceways and rearing tanks in general use range in size from 2 to 10 feet in width and from 20 to 100 feet in length. Raceways for fingerlings in general are not over 5 feet in width or 75 feet in length. The raceways are of durable wood construction, and the bottom is covered with sand or gravel. When the water supply warrants, raceways are separately fed and separately drained, and in all cases at our new rearing stations provision is made for a supply of fresh water to those raceways containing running water used previously. The bottoms of the raceways are sloped only slightly, and an effort is made to have the water in the lower end not more than twelve inches or thereabouts, since we have found that this condition allows for the equal distribution of the fish over the bottom, a condition which most fish culturists aim to obtain in order to give the fish a more equal opportunity.

SPECKLED TROUT

Appendix No. 4 shows by comparison with previous years and Appendix No. 3 shows in detail the progress that has been made in the culture and distribution of trout.

Comparative Statement of Speckled Trout Distribution

	Eyed eggs	Fry	Fingerlings	Yearlings	Adults
1928	60,000	475,000	1,134,600	....	200
1929	30,000	....	1,105,750	28,860	2,572
1930	95,000	....	2,436,029	60,257	913

The distribution of speckled trout was more than twice that of the previous year, and our objective for next year is to distribute in the neighbourhood of five million fingerlings.

RAINBOW TROUT

More than twice as many rainbow trout fingerlings were distributed in 1930 as in 1929; ten thousand yearlings were also distributed. It should be stated that no general distribution is anticipated, but a controlled distribution is under way, and the plantings made will be followed up in order to determine the most satisfactory basis for future stocking. The experimental work so far includes the following waters:

1. The waters of Bronte creek, Halton county, a stream in the agricultural section of southern Ontario, which at present is almost barren of trout and whose lower reaches are not suitable on account of high summer temperatures, were planted with rainbow trout. Waters of this type are impounded by dams, but it is alleged by certain authorities that, in view of the absence of fishways, in the second or third year the trout will migrate to the lake and be lost permanently to the stream. The rainbow trout introduced so far have done exceptionally well, and the work is worth while from the experimental standpoint, though no other striking results accrue, to determine what will actually happen to rainbow trout carefully planted in waters of this character and whether domesticated stock will show any depressed migratory instinct, such as is shown by the Pine River (Simcoe county) breed.

2. Rainbow trout were planted in Stoney creek, a tributary of the Coldwater river, Simcoe county. This is a spring stream that does not contain speckled trout but is suitable for them and is cut off from the speckled trout system by an impassable barrier. If the planting be successful, the lower reaches of the main stream will become stocked.

3. Rapid river, Geneva creek, Windy creek, and Pumphouse creek, large, cold, spring-fed streams in Sudbury district, northern Ontario, were planted with rainbow trout.

4. Rainbow trout were introduced into Lake Simcoe and other landlocked lakes of large area containing lake trout in the main body of the lake and speckled trout in the streams, a few of the latter being available for spawning by the rainbow trout, but the majority cut off by impassable dams. A very careful biological study was carried out on Lake Simcoe, and the possibilities for rainbow trout appear to be very favourable. Yearling trout of large size were introduced into the main body of the lake at various points around its circumference and also into Brough's creek, a suitable trout stream giving direct and natural access to and from the lake. Late fingerlings were also distributed in suitable parts of the stream, which is closed to all fishing, thereby giving the fish a better opportunity to become established and to reproduce their kind without interference. This experiment will also be the means of determining the effect of the introduction of rainbow trout on the native brook trout in the stream.

BROWN TROUT

The stocking policy for brown trout was outlined in the previous report and will be adhered to until more information on the subject is obtained through biological surveys.

Seventy thousand fingerlings were introduced into a number of suitable lake-trout lakes in Kenora district to determine whether they will thrive in lakes in that district, since trout streams are either negligible or non-existent there.

LAKE TROUT

The reduction in the output of lake trout as compared with the previous year was due to the prolonged and extremely stormy weather on Georgian bay and Lake Huron during the fall spawning operations for the year 1930. The output is fair, however, when compared with that of 1927 and 1928.

During the year a total of 3,658,967 fingerlings were distributed. Of the total distribution of fry and fingerlings, 15,636,702 were deposited in commercially fished waters and 3,501,300 in game-fish waters.

YELLOW PICKEREL

(Pike-Perch or Dore)

A comparison of the pickerel distribution for 1930 with that of 1929 shows a decided increase; on analysing this increase, it is found that the provincial hatcheries at Kenora and Fort Frances made a very creditable contribution.

Of the total production, 189,630,000 were deposited in commercially fished waters and 22,915,000 in game-fish waters.

WHITEFISH

The decline in the total number of whitefish distributed in 1930 as compared with the previous years was due to the weather conditions on Lake Erie, which entirely prevented spawning operations.

LAKE HERRING

There was an increase of nearly four million in the output of herring in 1930 as compared with that of 1929.

MASKINONGE

The artificial propagation of maskinonge was carried out at Omemee, on the Pigeon river, by using a portable hatchery as in previous years. Considerable basic work in this connection has been accomplished by the hatchery officials in charge, and the knowledge gained should open up the way to greater success in the future.

SMALL-MOUTHED BLACK BASS

Restocking depleted waters with small-mouthed black bass must be viewed from many angles, particularly on account of the large extent of the waters with which we have to deal. The introduction of small quantities of bass fry or fingerlings to inshore waters of the Great Lakes and such large inland lakes as Nipissing and Simcoe appears unnecessary when we consider the numbers of bass fry produced in these waters annually by natural propagation. Suitable restrictive measures on inshore waters and large inland lakes pertaining to bag limit, size limit, season, and closed areas should suffice. No one remedy would succeed in attaining our objective, namely, to maintain and, if possible, to improve the bass fishing in provincial waters. The courses being pursued to effect this are:

1. Protection of Fish during Spawning Season.—Although the closed season to July 1st is a sufficient protection in southern Ontario, it is not so effective in the lakes of northern Ontario and Georgian bay, where male bass may still be guarding their nests on and after July 1st.

One strong means of protection is by educating the public and obtaining their support in a campaign to protect the male bass while they are guarding their nests, and also to follow the law as set forth in the regulations.

2. *Closure.*—Depleted waters may become rehabilitated by closure and the introduction of parent bass.

3. *Harvesting.*—The harvesting of bass from productive bass lakes, although robbing one lake to feed another, is an additional means by which restocking of depleted waters may be effected.

During the open season the following bass lakes were tested by hatchery officers by the use of trap nets and seines to determine their suitability as bases of supply for bass fingerlings and yearlings:

Green lake, Brougham township, Renfrew county.
Cocwayong lake, near Donald, Haliburton county.
Cat lake, Blair township, Parry Sound district.
Herridge lake, townships of Strathcona and Law, Nipissing district.
Bass lake, Purdom and Booth townships, Thunder Bay district.
Fox lake, 12 miles from Kenora, Kenora district.

All the lakes named, with the exception of Cocwayong lake, are closed to all fishing (see list of closed waters on pages 53, 54, and 55).

Bass lake in Thunder Bay district and Cat lake in Nipissing district, require time to recuperate from the drain to which they were subjected during the years previous to closure before any results from harvesting will be apparent. The latter is suitable for bass propagation, as shown by biological survey.

Herridge lake, Nipissing district, is suitable as a base of supply for adults, which may be introduced into depleted waters prior to their spawning season. On account of the steep declivity of the shores, it is not suitable for seining out fingerling bass. It is quite possible, however, from the past year's observations, to collect bass fry in large numbers when they rise from their nests.

Green lake, Renfrew county, yielded 1,192 yearlings and two-year-old small-mouthed black bass by harvesting; it is an exceptionally fine lake from which to obtain a supply of bass.

Cocwayong lake, Haliburton county, yielded 2,500 small-mouthed black bass from 2 to 8 inches in length.

Fox lake, Kenora district, yielded 340 small-mouthed black bass from 2 to 12 inches in length. It may be noted that bass were not originally native to Fox lake; it was stocked with fingerling small-mouthed black bass by the Department in 1913 and 1915.

Pond Culture

Lake on the Mountain.—The small-mouthed black bass introduced into the Lake on the Mountain nested naturally on the gravel nests provided, and 123,000 small-mouthed black bass fry were collected and introduced into protected areas (among aquatic vegetation in shallow water) of suitable small-mouthed black-bass lakes, in the county of Prince Edward and neighbouring counties.

Ingersoll Pond.—Provision has been made under lease for a suitable rearing pond for bass at Ingersoll, Ont. The pond covers an area of approximately twelve acres and is so constructed that it may be drained. The satisfactory drainage of such a large pond is one of the difficulties with which we have to contend, and for this reason smaller rearing ponds are preferable.

The Ingersoll pond, however, has many favourable characteristics: It is a suitable bass environment, the crustacean plankton is abundant, and the introduction of golden shiners to provide food for the large fingerling and yearling bass has proved a success.

A quantity of suitable aquatic plants were introduced into the pond, and the margin was fertilized with fourteen loads of horse manure.

There is no reason why bass should not thrive in the pond, and in time it should yield good results.

Mount Pleasant Ponds.—At Mount Pleasant Hatchery six ponds were available for bass during the year. All the ponds were renovated during the fall of 1929 and again in the spring of 1930, that is, the ponds were drained and exposed to the sun in order to sweeten the bottom by the oxidation of toxic substances.

Section of a bass pond being refilled with water, Ontario Government Hatchery, Mount Pleasant.

Two ponds were used exclusively for breeding, and four were used exclusively for rearing. Two of the rearing or nursery ponds were fertilized with horse manure and two with sheep manure in order to compare the relative value of each fertilizer on the production of plankton and other aquatic life, and indirectly on the production of bass.

Golden shiners (*Notemigonus crysoleucas*) were introduced in advance of the bass, approximately 100 adults to each rearing pond, in order to provide suitable forage for the bass when they reached a length of two inches or more.

In the breeding ponds Nos. 1 and 2, 131 parent small-mouthed black bass, consisting of 63 males and 68 females, were used. Altogether 63 nests were set to accommodate the 63 males. The number of fertile nests in pond No. 1 was sixteen and in pond No. 2, eighteen. These 34 fertile nests produced in the neighbourhood of 300,000 fry, of which 241,590 odd were planted in suitable waters.

The three ponds used as nurseries have a total area of approximately 1.4 acres; when they were drained in the fall, 6,353 fingerlings were taken out. The majority of the bass were four inches in length.

This year the bass in one pond were from domesticated stock, but there was no indication that the yield from these was superior to that obtained from wild bass introduced into the second pond used. In fact, the hatchery manager stated that the opposite was true. It may be that the domesticated stock was not sufficiently well fed during the winter and spring months to be in the best condition for reproduction.

During the present year systematic observations were made on the limnobiological features of all the Mount Pleasant ponds and collections of bass for stomach analyses were made at frequent intervals. When this material is examined and the results correlated, we should be in a position to state more accurately what our ponds should produce per acre.

In order to rear fingerling bass in larger quantities a much larger number of nursery ponds is required, and also ponds for the culture of golden shiners and daphnids, the principal forage of bass.

FEEDING EXPERIMENTS WITH SPECKLED OR BROOK TROUT

Apart from the general character of the water supply, there is nothing more important than diet in the culture of fish, and in order to study properly the nutritional requirements of trout, an experimental laboratory was established at Mount Pleasant Fish Hatchery in 1929. The initial work in this connection was done by Professor J. D. Detwiler, of the University of Western Ontario, London; during the current year Professor Detwiler, Dr. I. L. Chaikoff, formerly of the Department of Physiology, University of Toronto, and Mr. R. D. Heard, M.A., formerly of the Department of Biochemistry, University of Toronto, in collaboration with the Director of the Branch, continued the problem and the results obtained were presented before the American Fisheries' Society in session at the Royal York Hotel, Toronto, August 27th, 28th, and 29th, 1930, by Professor Detwiler and Mr. Heard.

One part of the investigation, a brief account of which is given below, was to check the relative values of different kinds of food fed to trout in the hatchery at Mount Pleasant, and also to experiment with other foods with a view to obtaining a more economical diet, which at the same time would be of such nutritional value as to produce good growth and vigorous and healthy fish.

Experiments with the diets were run in duplicate and included the following:

Beef liver.
Beef heart.
Beef liver and beef heart, half and half.
Horse meat.
Beef liver plus dry skim milk, in a ratio of 80 to 20.
Beef liver plus clam meal, half and half.
Horse meat plus clam meal, half and half.
Horse meat plus clam meal plus dry skim milk, in a proportion of 60 to 20 to 20.
Beef melt.
Cooked tripe.

The fish used in these experiments were hatched during the latter part of February, 1930, from eggs obtained from domesticated stock, Normandale Trout Ponds, near Normandale, Ont. In selecting the fish for these experiments, the largest and the smallest were rejected.

As beef liver is generally accepted as one of the most satisfactory foods for trout at the age of those experimented upon, it was taken as a standard or check.

The fish were fed at intervals of three hours; by beginning at 7.30 A.M., five daily feedings could be accomplished conveniently. Increase in weight was taken to indicate the rate of growth.

"Before the fish were taken over for these experiments they had been fed on beef heart to which a little beef liver was added, the proportion as estimated by the hatchery manager being nine parts of heart to one part of liver." The effect of the change of food, with the exception of beef heart, beef liver and beef heart, beef liver and dry skim milk, caused a slower rate of growth as compared with that later on. The change to beef liver alone appeared to cause a rather unexpectedly large initial lag.

"Horse meat did not prove to be a satisfactory food when compared with beef liver, beef heart, or even beef melt." The addition of clam meal seemed to make it less desirable, but when dry skim milk as well as clam meal was added to horse meat, a very good growth was obtained. As it is difficult to feed just the right amount of food to fish at the age experimented upon, it is possible that they did not have to rely very much on the horse meat ingredient.

Beef melt gave good growth after the initial lag was overcome. The trout took to this food readily and ate considerable quantities, and it appeared to keep their bowels in good condition.

From the results obtained with beef melt, it merits consideration as a constituent of fish diet. Although the proportion in the diet giving good results was high, the actual cost at 2.5 cents per pound is low.

"The cooked tripe was quite unsatisfactory." It appeared to be very distasteful, and the fish lost considerable weight at first and the mortality was high.

Addition of clam meal to the diet gave good results and produced nearly as good growth as that of beef liver and dry skim milk. Unfortunately, the supply of meal in bulk at the present time cannot be depended upon.

The experiments performed with trout showed that the order of the diets according to their relative values was as follows: (1) beef liver and dry skim milk; (2) beef liver and clam meal; (3) beef liver; (4) beef liver and beef heart; (5) horse meat and dry skim milk and clam meal; (6) beef heart; and (7) horse meat. Considerable irregularity in the growth curves were shown with the diets, horse meat plus clam meal, beef melt, and tripe.

A study of the weights of the fish seemed to show a tendency of groups of fish having an initial advantage in weight though small, not only to retain this advantage but to produce an accelerated rate of growth as compared with those in duplicate troughs with slightly lower weight. Of the nine pairs of troughs, five pairs showed this tendency.

"This tendency would appear to show the necessity of careful selection of fish for feeding experiments in order to get them as nearly equal in size as possible. Incidentally, this may also show a racial difference in fish, a view which careful observations of growing fish undoubtedly support. There is little doubt that selective breeding, even that of mass selection, would materially raise the quality of the fish."

A record of the amount of food fed was also kept, but as the experiments were conducted for so short a time and that during the period of the life of the fish when it is difficult to estimate the optimum amount of food, the calculated efficiency of the diets is no doubt lower than it should be.

The feeding experiments outlined above commenced July 10th, 1930, and were concluded September 13th, 1930. It is realized that such experiments should extend over a considerably longer period of time, but since rather fundamental tendencies are indicated by the outline of the work given above, the results are submitted with this in mind.

In addition to the experiments carried out by Dr. J. D. Detwiler on the nutrition of speckled trout, from the viewpoint of fresh meat diets, another series of experiments were performed by Dr. I. L. Chaikoff and Mr. R. D. Heard, M.A., on the feeding of synthetic diets to speckled trout. A brief abstract of the paper prepared by Mr. Heard is as follows:

Two lines of investigation were adopted, in order to determine: (1) the effect of feeding liver which has been fractionated by the use of solvents and residues; and (2) the effect of variations of the proteins and protein content of diets.

First, with a basal diet, as described in the work of McCay, Bing and Dilley[1] (1927), and a fresh liver diet as two separate controls, various extracts and residues of liver were added to the basal diet to form a series of diets. The solvents used were ether, alcohol, and acetone. In no case was the temperature of the constituents of these diets allowed to rise above body temperature (37.5°C.)

With regard to the second method various proteins were added to the constituents of the basal diet or some of these constituents were replaced by proteins. Six different diets were tried. Before preparation, the proteins used were heated for two hours at 150°C. to destroy any factor H content.

Ten fingerlings were chosen for each experimental group, and each group was confined in a separate trough 6 inches wide by 30 inches long. The water was maintained at a depth of 6 inches and each trough was supplied with water from a common head trough. Diets were mixed into a stiff paste with water and the fish were fed four times daily, the troughs being cleaned each day.

The results of the experiments were as follows:

1. The basal diet when supplemented either by extracts or residues of liver gave as good results as when supplemented by raw liver. In this connection Mr. Heard points out:

> McCay, Dilley and Crowell[2] (1928) have attempted to activate a similar basal diet with extracts of liver, but have observed negative results. They have concluded that factor H, the agent believed to be the most active in stimulating the growth of trout, was not extracted by alcohol or ether. In view of the fact that McCay and Dilley[3] (1927) showed this factor to be thermolabile, it was considered advisable to repeat the use of these solvents in the fractionation of liver and adhere more rigidly to temperature conditions. McCay, Dilley and Crowell[4] (1928) employed a maximum temperature of 65°C. in the concentration of the extracts. No records were given in regard to the effect produced by feeding the residues of the liver.
>
> *The extract and residue preparations used in this instance were not subjected to a temperature in excess of that of the body, i.e., 37.5°C.*

2. The use of the basal diet itself shows no growth.

3. The use of the basal diet when supplemented by gelatin, egg albumin, or both, shows good growth, and the activation again compares favourably with that produced by raw liver and in this case can only be due to the protein.

These experiments covered only a short period of time; and while they were quite satisfactory, no definite conclusions can be reached until further work has been done along similar lines.

LOCATION OF HATCHERIES

The names of the hatcheries, their locations, and the species propagated are as follows:

Hatchery	District or county	Species propagated
Kenora Hatchery..........	Kenora.........	Brown trout, lake trout, pickerel, whitefish.
Fort Frances Hatchery......	Rainy River....	Pickerel, whitefish.
Port Arthur (P) Hatchery...	Thunder Bay...	Speckled trout, lake trout, whitefish.
Port Arthur (F) Hatchery...	Thunder Bay...	Lake trout, pickerel, whitefish.
Dorion Trout-rearing Station	Thunder Bay...	Speckled trout (1931).
Sault Ste. Marie Hatchery...	Algoma........	Lake trout, pickerel, whitefish.
Sault Ste. Marie Trout-rearing Station............	Algoma........	Speckled trout.
Pembroke Trout-rearing Station, Pembroke........	Renfrew........	Speckled trout.
Belleville Hatchery.........	Hastings.......	Lake trout, pickerel, whitefish, herring.
Codrington Trout-rearing Station, Codrington.......	Northumberland	Speckled trout.
Glenora Hatchery..........	Prince Edward..	Speckled trout, lake trout, pickerel, whitefish, herring.
Lake on the Mountain (Glenora Hatchery).........	Prince Edward..	Small-mouthed black bass.
Mount Pleasant Hatchery...	Brant..........	Speckled trout, brown trout, small-mouthed black bass.
Normandale Trout Ponds and Hatchery No. 1........	Norfolk........	Speckled trout.
Normandale Hatchery No. 2.	Norfolk........	Rainbow trout, whitefish, herring.
Gibson's Creek Trout-rearing Station................	Norfolk........	Speckled trout.
Ingersoll Bass-rearing Pond..	Oxford.........	Small-mouthed black bass.
Kingsville Hatchery........	Essex..........	Whitefish, herring.
Sarnia Hatchery...........	Lambton.......	Pickerel, whitefish, herring.
Southampton Hatchery.....	Bruce..........	Lake trout.
Wiarton Hatchery..........	Bruce..........	Lake trout.
Collingwood Hatchery......	Simcoe.........	Pickerel, whitefish, herring.

P = Provincial.
F = Federal.

TRANSPORTATION OF FISH

Among the problems of the Biological and Fish Culture Branch of the Department of Game and Fisheries for Ontario, the transportation of fish is one of major importance, requiring for successful results, the most careful organization and advance preparations.

Fry of commercial fish reared in hatcheries located at strategic points along the shores of the Great Lakes are transported very expeditiously by boat to favourable planting places in these waters. In many instances, where the hatchery is located near a favourite spawning ground of the fish reared, the latter are transported in scows. The scows are so constructed that the fish are continuously supplied with normal lake water and may be liberated at any planting location with the greatest ease. In this instance also, distribution may cover a very large area. For long distance runs by boat, fry and fingerlings are generally transported in cans having a carrying capacity of ten gallons. The number of fish carried in this way is governed by the size of the fish. Crowding is avoided, so as to prevent too rapid deoxygenation of the water.

With the rapid development of game-fish rearing, the use of trucks for distribution has been found most satisfactory and economical. Their use is possible in the southern portion of the Province on account of the development of good roads and highways, and will gradually extend to previously inaccessible areas as these highways penetrate north and west. Such development makes lakes and streams more accessible to fishermen, and as a result they are more rapidly depleted. The use of the truck in the service of the Fish Culture Branch is a rapid way of meeting the necessity of restocking and acts as an opposing force to depletion. At the present time the maintenance of a truck transportation system is an important adjunct to two of the major game-fish-rearing establishments of the Province and will be increased with the development of rearing stations in other districts. Long distance trips, if feasible, are made by trucks.

In many instances rail shipments are advantageous. As in the case of trucks, the fish are carried in suitable cans or tanks depending on the size and age of the fish. In the case of rail shipments arrangements are made in advance with the applicant, a public-spirited citizen or member of a Game and Fish Protective Association, to meet the shipment with a car, truck, or other conveyance, so that the fish may be conveyed to the planting locations as quickly as possible. In every instance, hatchery officials accompany the fish to the planting locations, and it is their responsibility to see that the proper technique is practised in planting, so that the chance of survival will be more assured.

Trucks play an important part in the distribution of fish.

When distribution is made to lakes and large streams, provision is made to have a boat available to carry the fish to the planting locations. When adult fish are introduced into suitable inland waters, the fish are transported by pontoons, when larger boats which could carry fish tanks are not available.

One of the most novel means of transportation is by aeroplane. During the year the Department took advantage of this method to transport, expeditiously and successfully, 25,000 lake trout fingerlings to Dogtooth lake in the district of Kenora.

Handling of fish prior to transportation requires the utmost care and skill. The surface layer of the body of a fish is very delicate, and touching with dry hands, or causing the slightest abrasion leaves the way open to infection by bacteria or fungus. The greatest care must be exercised in handling fish with dip net, trap, or seine, or whatever type of net is used in coralling the fish for shipment, and in transferring them to the cans or tanks in which they are carried. It is unlikely that the effects of mishandling will be evident at first, but the elimination of such a condition means the removal of at least one factor operating against successful survival.

The cans or tanks in common use are constructed of durable galvanized iron. The ordinary fish cans have a carrying capacity of ten gallons and the tanks of seventy-five gallons. The former are painted green on the outside, numbered and labelled in white with the name of the Provincial Government hatchery. When the fish have to be carried for a considerable distance inland, cans of light aluminium ware may be used and are so constructed that they fit the curve of the back.

The water in the cans in which the fish are transported is maintained at a low temperature. In this way, provision is made for more satisfactory aeration or oxygenation. The amount of oxygen which will dissolve in water depends upon temperature and pressure. If we take distilled water and force oxygen into it, we find that the number of cubic centimetres of oxygen taken up by a litre of water measured at normal temperature and pressure, will decrease with an increase in the temperature of the water. It is necessary, therefore, when we place fish in fresh water in cans or tanks at a hatchery, in preparation for transportation, to make provision for maintaining the water at a low temperature, so that satisfactory aeration or oxygenation may be assured. This is done by having the cans and tanks provided with receptacles which fit into the top in which broken pieces of ice may be carried. The bottom of each type of receptacle is perforated, and as the ice melts the ice-water trickles or drops into the water in the can, keeping it at a low and constant temperature. The more constant the temperature the better, since fish are extremely sensitive to sudden changes. In order to maintain an even temperature, fish cans may be surrounded by canvas insulation, but if plenty of ice is available and transportation rapid, this is unnecessary. Tanks carried in trucks are covered with a suitable tarpaulin.

If the water in which the fish are carried is maintained at a low temperature, the motion of the water during transit either by rail or in trucks has been found sufficient for satisfactory oxygenation. Hatchery attendants have very little difficulty, providing they check the temperature in the cans regularly and have a supply of ice on hand when required. If the cans are left standing at a railroad station for any length of time, a good way to assist in aeration is to load the cans on one of the platform trucks, and to move it backwards and forwards. This causes sufficient motion of the water to effect suitable aeration. In the case of large tanks, the use of compressed air and oxy-tanks may at times be resorted to. Disturbing the fish by removing water from the can with a dipper and allowing it to fall from a height is recommended only in urgent cases, and at all times should be performed with the utmost caution. It is a dangerous practice to use with tiny fry on account of possible injury by forceful impact. In any case, this method excites the fish, with the result that they use up more oxygen and the very end which is being sought is defeated.

Fish are generally fed the night before shipment is made, in order to avoid the accumulation of excrement in the cans, which would occur if the fish were fed on the day they were shipped. Accumulations of excrement would lead to a diminution of the oxygen supply and to pollution of the water, on account of the small volume carried.

Hatchery officials are responsible for the effective transportation and planting of all classes of fish and are directed in their efforts by the Biological and Fish Culture Branch of the Department of Game and Fisheries.

Eleven hundred and ninety-two shipments of fish were made during the year, and of these only five reached their destinations in poor condition.

PLANTING OF FISH

Hatchery officials are responsible for the planting of fish of all species, acting under requisitions and definite instructions from the Branch.

Nevertheless, the Branch advises applicants regarding the necessary technique required in planting operations, on requisitions issued.

Successful planting depends on the knowledge of the requirements of the fish, and this may be obtained only by close observation and study of the life-history of each species. Dr. Lawson Hart and Dr. Andrew Pritchard, formerly of the Department of Biology, University of Toronto, have made special contributions to the knowledge of the life-history of the whitefish (*Coregonus clupeaformis* Mitchill) and the herring (*Leucichthys artedi*), respectively, by studies carried out on the Bay of Quinte, Lake Ontario, under the auspices of the Fisheries' Research Laboratory of the Department of Biology, University of Toronto. The information, which is of an exact kind and the result of inquiry over a considerable period of time, gives a clue to the most suitable location in which to deposit whitefish and herring fry.

Mr. J. H. Fox, Science Master, Windsor Collegiate Institute, commenced an investigation during the year under the direction of the Director of the Branch regarding the most suitable natural environment for lake trout fingerlings. Lake trout fingerlings were placed in wire cages, 15 by 12 by 8 inches, in various positions in Lake Ontario, opposite Port Bowmanville, and examined once a week to determine the percentage of mortality. At the same time water samples, plankton, temperature records, and bottom fauna were taken in the vicinity of the cages.

The first series of experiments showed that in an unprotected cage, water currents, as a controlling factor in mortality, overshadow all other factors.

In the second series of experiments the effect of currents was largely eliminated by using cages with a band of galvanized iron around four sides, leaving only the top and bottom open, and instead of being suspended, the cages were allowed to rest on the bottom. By such an arrangement the effect of strong water currents was minimized.

The experiments indicated that the smallest daily mortality among lake trout fingerlings occurs at a depth of 24.5 metres (80.4 feet).

More prolonged experiments, using larger numbers of fish, may be undertaken by the Branch in 1931.

CLOSED WATERS

The following waters are closed to all fishing:

Bass Lake, townships of Purdom and Booth, district of Thunder Bay; indefinite closure by Order-in-Council of April 29th, 1930, for bass propagation.

Beryl Lake, north half of section 26, township of Vankoughnet, district of Algoma; closed until May 1st, 1931, by Order-in-Council of December 20th, 1927.

Brough's Creek, township of South Orillia, county of Simcoe; closed until June 2nd, 1934, by Order-in-Council of August 14th, 1930, for rainbow trout propagation.

Cat, or Finger Lake, concessions 19, 20, 21, township of Blair, county of Parry Sound; indefinite closure by Order-in-Council of August 14th, 1930, for bass propagation.

Cedar Creek, Pitch Creek, and Whitewood Creek, district of Thunder Bay; closed until May 31st, 1933, by Order-in-Council, February 26th, 1930, for speckled trout propagation.

Crooked Lake, district of Sudbury, *Missinabi Lake*, districts of Sudbury and Algoma, and that portion of *Dog Lake* lying north of the right-of-way of the Canadian Pacific Railway and located in the districts of Algoma and Sudbury; all closed until July 1st, 1932, by Order-in-Council of February 26th, 1930, for bass propagation.

Eagle Lake, township of Anstruther, county of Peterborough, closed for three years commencing August 1st, 1929, by Order-in-Council of August 14th, 1929, for brown trout propagation.

Esnagami Lake, townships of Esnagami, Rupert, and Alpha, and unsurveyed territory; *Kawashkagami Lake*, township of Sexton; *Fleming River*, township of Sexton; *Fleming Lake*, townships of Sexton, Danford, and unsurveyed territory; *Kawashkagami Creek*, lying between Fleming lake and Island lake, in unsurveyed territory—all in the district of Thunder Bay; closed indefinitely by Order-in-Council of November 19th, 1930, for speckled trout propagation.

Fox Lake, twelve miles from Kenora, in unsurveyed territory of the district of Kenora; closed indefinitely by Order-in-Council of October 20th, 1927, for bass propagation.

Green Lake, concessions 6, 7 and 8, township of Brougham, county of Renfrew; indefinite closure by Order-in-Council of September 16th, 1930, for bass propagation.

Herridge Lake, townships of Strathcona and Law, district of Nipissing; indefinite closure by Order-in-Council, February 26th, 1930, for bass propagation.

Lake on the Mountain, at Glenora, Prince Edward county; owned by the Crown and closed for hatchery purposes and for bass propagation.

Sucker Lake, township of Assiginack, district of Manitoulin; indefinite closure by Order-in-Council of November 6th, 1929, for bass propagation.

Trout Lake, township of McKim, district of Sudbury; indefinite closure by Order-in-Council of August 14th, 1930.

The following are examples of cases where game fish are protected, and where propagation may be carried on at the discretion of the Department:

LAKE OF THE WOODS:

1. *Clearwater Bay.*
2. *Woodchuck Bay.*
3. *Andrews Bay.*
4. *Bigstone Bay.*
5. *Rat Portage.*
6. *Popular Bay.*
7. *Lobstick Bay*, closed especially for hatchery purposes.
8. *Sabaskong Bay* (maskinonge sanctuary).—This includes all the waters in the bay, and inlets and bays tributary thereto lying east of a line drawn northeast from the west side of Brule point to the westerly extremity of Rabbit point.
9. *White Partridge Bay.*—In this instance the line is drawn across from Zigzag point south of 105P; thence to I.R. 38a.

KENORA DISTRICT:

1. *Little Vermilion Lake*, township of Vermilion, District of Kenora.
2. *Pelican Lake*, Kenora (near Pelican on C.N.R.); lake trout and pickerel propagation.

RAINY RIVER DISTRICT:

Stanjikoming Bay.

LAKE NIPIGON:

In regard to gill nets authorized for *Lake Nipigon*, one of the conditions reads as follows: "Gill nets authorized in the license shall not be set, placed, or located within one thousand yards of the mouth of any tributary, river, creek, or stream, nor within two miles from Virgin falls, and no nets shall be set on speckled trout spawning grounds, or on grounds set aside for the taking of spawn by the Department, namely: West bay, Chief bay, Ombabika bay, Black Sturgeon bay, south of Long point in South bay, and those waters lying east of a line drawn from one mile west of Poplar point to one mile west of High Hill river, or in other waters as directed."

LAKE SUPERIOR:

Nipigon Bay, closed permanently.

ALGOMA DISTRICT:

Echo Lake, township of Kehoe; closed for hatchery purposes (pickerel).

MANITOULIN ISLAND:

1. *Kagawong Lake.*
2. *Manitou Lake.*
3. *Mindemoya Lake.*

GEORGIAN BAY WATERS:

1. *Entrance to Spanish River.*
2. *Whitefish Bay*, closed indefinitely.
3. *McGregor Bay*, closed indefinitely.
4. *Killarney Bay*, closed indefinitely.
5. *East Shore.* Condition 19 of the conditions governing licensees states: No nets shall be set in that portion of the waters of Georgian bay east of a line drawn northwesterly from the most westerly point of Moore's point; thence northwesterly to the most southwesterly point of Beausoleil island; then continuing northwesterly to Gin island; to Smooth island; to Whaleback Beacon; to Eshpadekong island; to the easterly side of Pine island; to Phillimore rock; to Bass Group islands; to Barbara rock; to Campbell's island; to the most easterly end of Sandy island; to the westerly side of Pancake island; to the most westerly point of Franklin island; to Twin island; to Groundhog island; to Hang Dog island; to Champlain island; to Tie island, and to the mouth of the French river.
6. *Matchedash Bay*, closed July and August.
7. *Colpoy's Bay*, closed to commercial fishing permanently; used for lake trout propagation.

LAKE ST. CLAIR:

Mitchell's Bay, closed to commercial fishing during the months of May, June, July, and August

LAKE ERIE:

Inner Bay of Long Point Bay, closed to commercial fishing with the exception of seining and hoop netting, which must not be carried on during the spawning season of black bass. Fishing of this nature is prohibited during the months of May, June, July, and August.

BAY OF QUINTE:

Quoting from the conditions governing licensees, we have under condition 18 the following statement: "No one shall fish with nets during the months of June, July, and August, in that portion of the waters of the Bay of Quinte lying westward of a line drawn from Green point, in the county of Prince Edward, to the eastern limit of the town of Deseronto, in the county of Hastings. That portion of the Bay of Quinte westward of a line drawn across the bay from Horse point on the southern shore to the Lehigh Cement Works' wharf opposite on the northern shore to the Belleville Highway bridge, is hereby set apart and reserved for fishing for hatchery purposes."

ACKNOWLEDGMENTS

In conclusion, I desire to publicly express my appreciation of the assistance and support which has been rendered to the Department throughout the year.

The members of the staff, of both the inside and outside services, have faithfully and zealously carried out any and all duties which have been allotted to them, and the spirit of loyal co-operation in the performance of the work has at all times been evident.

Our work has been made more pleasant and attractive by reason of the assistance and co-operation rendered by the transportation companies and the various Fish and Game Protective Associations throughout the Province, the officers and members of which latter organizations having at all times worked in conjunction with the Department and its various officers in an earnest endeavour to secure a proper observance of the provisions of the Ontario Game and Fisheries Act.

All of which is respectfully submitted.

I am, Sir,

Your obedient servant,

D. McDonald,
Deputy Minister of Game and Fisheries.

APPENDIX No. 1

SPECIES AND QUANTITIES OF FISH PLANTED IN PROVINCIAL WATERS, 1930

Note.—(C) Before the figure indicates Commercially Fished Waters.

Speckled Trout Eggs

Simcoe:

Pratt's rearing ponds	50,000

Thunder Bay:

Long lake	5,000
Wideman lake	5,000
Lower Twin lake	5,000
Upper Twin lake	5,000
Anderson lake	5,000
McKenzie lake	5,000
Clegg lake	5,000
Elbow lake	5,000
Department Marine and Fisheries, Ottawa	5,000

Speckled Trout Fingerlings

Addington:

Tontia Wanta creek	10,000

Algoma:

Trout Lake inlet	1,000
Moose lake	4,000
Agawa river	10,000
Mongoose lake	4,000
Spruce lake	5,000
Loon lake	4,000
Chippewa river	10,000
Batchewana river	4,000
Sand lake and creek	4,000
Wartz lake	4,000
Snowshoe lake	2,000
Silver creek	7,000
Gull lake	4,000
Upper Pine lake	2,000
Little Trout lake	5,000
Jones lake	2,000
Root river	4,000
Heyden lake	2,000
Boyle's creek	2,000
Walker lake	2,000
Burrough's lake	2,000
Ashigan creek	15,000
Bear creek	2,000
Mountain lake	5,000
Michipicoten river	20,000
Loon lake	2,000
Spring creek	5,000
Harmony river	2,000
Mud creek	2,000
Johnson's creek	2,000
Bridgeland river	4,000
Kent's creek	2,000
McQueen's creek	2,000
Cannon creek	2,000
Dunn's creek	2,000
Iron river	2,000
Stokely creek	2,000
Twin lakes	2,000
Victoria creek	2,000
Fairy lake	2,000
McVeigh creek	8,000
Spider lake	8,000
Lost lake	8,000

Algoma—*Continued*

Hart lake	6,000
Lower Island lake	6,500
Dam creek	4,000
Murphy lake	4,000
Trout creek	5,000
Trout lake	4,000
Broad lake	5,000
Barn's creek	5,000
Lake Franklin	5,000
Big Carp creek	2,000

Bruce:

Willow creek	7,000
Vance stream	5,000
Stoney Spring creek	3,000
Plum creek	3,000
Colpoy's creek	1,500
Silver creek	6,000
Barrow Bay creek	5,000
Silver creek	561

Dufferin:

White's creek	5,000
Unnamed creek	2,000
Pine river and tributaries	10,000
Cemetary creek	10,000
Greenwood creek	20,000
Warne's creek	5,000
Platt creek	5,000
Bowling Green river	5,000
Hunter's creek	5,000
Credit river and tributaries	40,000
Nottawasaga river	15,000

Durham:

Cavan creek and tributaries	10,000
Tyron creek and tributaries	10,000
Mount Pleasant creek	30,000
Hayden's stream and tributaries	10,000
Ganaraska river	20,000
McKinley's creek	10,000
Liskard creek	10,000
Harris creek	2,000
Farrow's creek	10,000
McLaughlin's creek	10,000
Cale's creek	10,000
Squair's creek	10,000
W. J. Lytle stream	5,000
Bert Reid creek	5,000
Chandler creek	5,000
Gardner pond	5,000
Nicholson creek	2,000

Elgin:

Ball creek	2,000
Wolfe creek	1,000
Howie creek	500

Frontenac:

Trout lake	20,000
Cataraqui creek	10,000

Grenville:

Kemptville Agricultural School	25

SPECIES AND QUANTITIES OF FISH PLANTED IN PROVINCIAL WATERS, 1930—*Continued*

Grey:

Saugeen river and tributaries..	10,000
Rocky Saugeen	12,000
Beaver river and tributaries...	15,000
Sydenham river	10,000
Oxenden creek	1,500
Creeks on lots 1 and 2, concession XXII	8,000
Priddle's Spring creek	15,000
Mulock lake	2,000

Haliburton:

Glidden's creek	2,500
Holland's creek	1,000
Bonham's creek	2,500
North lake	10,000
Colburne's creek	10,000
Fish lake	10,000
McCue creek	10,000
Ross Lake creek	10,000
Bear Lake creek	20,000
Elephant creek	10,000
Wren lake	10,000
Torch lake and creek	1,000

Halton:

Murray's creek	2,000
Acton creek	5,000
Ballinifad	2,000
Clancy's creek	700
Nicholl's creek	3,000

Hastings:

Deer river	20,000
Rawdon creek	10,000
Egan creek	10,000
Cedar creek	5,000
Little Papineau creek	10,000
Two Mile creek	10,000
Upper Crysler creek	10,000
Papineau creek	10,000
Moore's lake	10,000

Huron:

Clinton Spring creek	1,000
Patterson's creek	2,000
Johnson's creek	7,000
Middleton's creek	4,000
Spring Hill creek	7,000
Crawford's creek	500
Maitland river	2,000

Kent:

Henry creek	1,000

Lambton:

Hungry Hollow creek	2,000

Manitoulin:

Mindemoya river, lake, and creek	1,000
Blue Jay creek	4,000
Manitou river	5,000
Norton creek	2,000

Middlesex:

Spring ponds	1,000
McFarland's Spring creek	250
Wye creek	1,000
Humphry creek	2,500
Dorman's creek	1,000

Muskoka:

Fairy lake	10,000
Oxtongue lake	10,500
Clear lake	7,000
Outlet creek	2,000
Walker's lake	10,000
Hock Rock creek	10,000
Echo creek	2,000
Little East river	18,700
Buck's creek	10,000
White lake	5,500
Echo lake	2,000
Nelson's creek	10,000
Casselman's creek	10,000
Muskoka river	11,200
Joyce's creek	10,000

REPORT OF THE DEPUTY MINISTER OF LABOUR

To the Honourable J. D. Monteith,
Minister of Public Works and Labour.

Sir,—I have the honour to submit the following report upon the work of the Department of Labour of Ontario for the fiscal year 1929-1930.

A slackening in industrial activity was general in the Province as throughout Canada and in other countries and the increases in the volume of employment which are usual at certain periods of recovery were on a smaller scale than in former years. According to the reports of the Dominion Bureau of Statistics the volume of employment for the fiscal year 1930 is represented by an index number of 117.1 or a drop of over five points as compared with 1929, and the year ended with the index number approximately fourteen points lower than at the close of the previous year. Declines were recorded in various manufacturing industries, notable among which were those in iron and steel, lumber and textile products. Decided gains in the logging industry during the first half of the year were not counteracted by the slackness of the latter half and in the mining industry gains were fairly consistent over the whole year, which was also the case in the services group. Construction, communication and trade showed smaller gains.

Employment Service

The general depression in business which was prevalent during 1930 affected the work of the Employment Service probably more than that of any other branch of the Department of Labour. The resources of the various offices were taxed and the best efforts of the members of the whole staff were put forth on behalf of persons seeking employment.

The number of vacancies listed at the offices totalled 155,514 for the fiscal year as compared with 182,620 for the previous year, or a decrease of nearly fifteen per cent. The number of applications for work on the other hand increased approximately six per cent. to 237,367. The total of placements affected by these offices decreased approximately eleven per cent., the number being 141,841 as compared with 159,519 for the previous year. A smaller proportion than last year of the placements made were of a regular nature, that is, for employment of at least two weeks' duration. The increase in the proportion of casual placements was a natural result of this period of depression when applicants were eager for whatever opportunities offered.

The policy of extending the work of the Employment Service through the publicity of the radio was continued. The weekly broadcasts were of value in procuring workers of special qualifications for certain positions and in presenting to the radio audience an account of conditions as viewed from the standpoint of the Employment Service. The value to municipalities of close co-operation with the offices of the Employment Service was frequently demonstrated during the year. These offices are well equipped to assist municipalities in their employment problems and to meet municipal requirements in emergencies such as have had to be met during the past year.

In September the International Association of Public Employment Services held the annual convention in Toronto when an opportunity was afforded all the superintendents of the Ontario offices to attend these meetings. Mr. H. C. Hudson, the General Superintendent of the Ontario Offices, was re-elected President of the Association.

Boiler Inspection Branch

The work being done by the Boiler Inspection Branch ensures that all new steam boilers and pressure vessels manufactured in Ontario are of modern construction and first-class workmanship, manufactured and installed in accordance with the requirements of the Canadian Interprovincial Regulations. Such steam boilers are inspected during construction by inspectors of this Branch and certificates are issued which state thereon the materials used and the maximum allowable steam pressure that may be safely carried. Used steam boilers being sold, exchanged or extensively repaired must also be inspected by inspectors of this Branch as must the installation of high pressure steam pipe lines.

According to the eighteenth annual report of the Boiler Inspection Branch for the fiscal year, 417 drawings and specifications for steam boilers and pressure vessels were surveyed and registered, as compared with 624 in 1929, and fifty-seven designs were returned to manufacturers for revision. The number of new pressure vessels inspected totalled 641 as against 831 last year and the used pressure vessels inspected numbered 1,582, or fifty-four fewer than in 1929. Altogether 3,522 certificates were issued during the year, a decrease of 340 as compared with those for 1929. The revenue of the Branch amounted to $20,136.84 as compared with $25,167.15 the previous year.

Board of Examiners of Stationary and Hoisting Engineers

The report of the Chairman of the Board of Examiners of Stationary and Hoisting Engineers indicates increased activity on the part of the Board during the fiscal year 1930. The number of certificates issued by the Board totalled 17,865, as compared with 16,037 in 1929, the greatest increase being for renewals, which numbered 15,871 as compared with 14,149 last year, or an increase of 1,722. The number of candidates for examination showed an increase of seventy-nine, numbering 2,134. Of this number 876 were examined in Toronto and 1,258 at outside centres. Divided according to grades, 1,132 were trying for fourth class certificates, 474 for third, 155 for second, fifty-six for first, 176 for hoisting and 141 for portable certificates. This increase in the number of certificates renewed and in the number of candidates for examination would indicate a greater desire on the part of engineers and firemen to make the most of their opportunities and on the part of many to make sure of their jobs by holding the necessary certificates or to be prepared for whatever jobs might be offered by having their certificates renewed up to date, even if they had not been working at this trade for some time.

Factory Inspection Branch

Greater activity on the part of the members of the factory inspectorate is indicated in the forty-fourth annual report of this Branch. Great care was exercised by the inspectors in maintaining a high standard of general conditions of employment and in having all establishments conform to the various requirements of the Factory, Shop and Office Building Act. During the year 1930, 20,227 inspections were made or 2,283 more than in 1929 and the number of employees in the industries, mercantile establishments and office buildings inspected totalled 319,556. Altogether 6,996 orders were issued relating to the various requirements of the Act and 1,618 permits were issued, of which number 698 were for overtime and 759 were in connection with contract workers. Accidents reported numbered 4,817 of which fifty were fatal as compared with 7,083 with sixty-three fatal in 1929. Twelve explosions causing the death of six employees and injuries to eleven others were reported during the year.

The Examiner of plans of factory buildings reports in part as follows:

> "Although the last year has been generally regarded as a period of gradually increasing depression, it is evident that a large proportion of industrialists have supreme confidence in the future of this Province. During the year plans for buildings to the value of over twenty-one million dollars have been submitted for approval in accordance with the provisions of the Factory, Shop and Office Building Act. Although this is about forty per cent. less than the figures for last year, when the amount was greatly in excess of any previous year, the total may be considered as satisfactory in view of present conditions. The figures include factories 53.8 per cent., office buildings 38.9 per cent. and shops 7.3 per cent. It is interesting to note that almost thirty per cent. of the amount scheduled for factory buildings has been used for extensions to existing plants, indicating, as it does, the confidence of experienced manufacturers in the certainty of better times near at hand."

Apprenticeship Branch

The Apprenticeship Act has been in operation for two years and the development of the work to date is encouraging. Many problems remain to be solved and considerable opposition has still to be met before suitable programmes can be worked out in each designated trade, but a satisfactory beginning has been made. The scheme of apprenticeship, as set forth in the Act and regulations, is almost completely organized and it is expected that the school programme will be in full operation during the coming winter.

The existing legislation and all regulations affecting apprenticeship have been drafted or approved by joint committees of employers and employees in designated trades and have been amended and approved by the Provincial Apprenticeship Committee before being submitted to the Government.

The chief development during the past year was the inauguration of the assessment scheme, under which all employers in designated trades are assessed for the purpose of paying a living allowance of ten dollars per week in lieu of wages to apprentices while attending day classes. It is felt that, since all employers in the industry will be benefited by the proper training of apprentices, all should share in the cost of producing an adequate supply of skilled workers. By distributing the cost over the whole industry the burden of any one employer will be kept at a minimum. The rate of assessment to cover the cost of classes for the coming winter has been set at one-eighth of one per cent. of the payroll for 1929.

Arrangements are being made to conduct special day classes for apprentices in the larger industrial centres to be attended by first and second year apprentices from all parts of the Province and it is expected that over three hundred apprentices will attend this winter. The instruction will be of an intensely practical nature, consisting of at least half time in trade training. The remaining time will be divided among such subjects as blueprint reading, mathematics and science directly relating to each trade.

The number of apprentices registered to October 31st, 1930, was 1,418, an increase of 369 since the close of the previous year, and the number of active contracts was 1,168, an increase of 140. Altogether 129 apprentices successfully completed apprenticeship period during the year, whereas only thirty-one completions took place during the previous year.

Inspection of Caisson Work

The work of the Caisson Inspector has been successfully carried out during the year and through the co-operation of contractors engaged on tunnel work satisfactory conditions have been maintained for the men employed on about ten miles of tunnel work with nine or ten shafts. On one job now under construction 500 men are engaged each twenty-four hours and the accident record for the past ten months, while not perfect, has been very creditable, the occurrence of only three accidents of a serious nature indicating great precaution on the part of those responsible for the safety of the men. There is a considerable amount of machinery used on this work which must be inspected to avoid the use of inferior equipment and a decided improvement is noticed in the method of electrical installation. When wires are carried through the tunnels they are supported by brackets fastened to the side of the tunnel and wires are secured to insulators of an approved type. This method eliminates danger of burns or shocks to the workers and has made for more satisfactory conditions generally. At the present time five big construction jobs are under way.

Industrial Safety Division

A part of the programme carried out by this division consisted in a study of seating conditions in factories, especially in the clothing and process factories where women have to sit at their work for four-hour periods. A chair was then designed to promote correct sitting posture and three chairs were built, which are adjustable to the requirements of workers of various heights. The pelvis seat bones rest in a pocket depression in the seat floor, which sustains the pelvis in its right relation to the spine and the front edge of the seat is rounded to avoid undue pressure on the nerves and blood vessels at the bend of the knee. The back rest is formed to the contour of the back or spine and is adjustable to suit the height of the individual worker, as also are the legs which are mounted in sockets with screw adjustment for this purpose. A model was built of two seamstresses at work, one sitting in a slouch posture on an ordinary chair, and the other sitting correctly on the improved chair. This was shown to the public at the Canadian National Exhibition.

Other safety work carried out by this division was the developing and building of an air testing machine for the Division of Industrial Hygiene.

A study of the hazards in the dry-cleaning and dyeing industry was made to enable the Department to draft regulations to govern same. Our Safety

Engineer while in Britain this year spent two weeks in visiting several large industrial plants studing methods of dealing with the hazards involved in the chromium-plating industry, etc. He also visited the Home Office Industrial Museum and learned from officials the methods adopted to protect industrial workers against accidents and to promote conditions most favourable to health and efficiency.

Industrial Unrest

Industrial disputes reported in Ontario caused a loss of 50,513 working days during the fiscal year 1930. This was a decrease of approximately one-third the total for 1929 and was the smallest loss since 1926. The number of workers affected was 4,315 as compared with 5,172 the previous year and altogether twenty-one industrial disputes were reported, according to data published by the Federal Department of Labour.

The greatest unrest was found to be in the clothing industry, in which four strikes involving 2,407 workers resulted in a loss of 20,924 days. Two strikes among logging workers involved 900 men and caused 20,700 days lost. These two items are by far the largest, the next two items in importance being four strikes in the manufacturing of metal products, affecting 172 workers and resulting in the loss of 5,247 days, and six in the building trades affecting 571 workers and causing 3,107 days to be lost. The remaining five strikes affected few workers or were of short duration, two of musicians and stage hands, two among railway labourers and one of tobacco workers.

The question of wages was the chief factor in disputes which caused approximately fifty-eight per cent. of the time loss. In nine strikes affecting 1,486 workers and causing a loss of 27,241 days, wages alone were the issue, a demand for an increase or a protest against a reduction being recorded; in the case of two affecting 357 workers and resulting in 2,044 days lost the demands were for increase in wages and certain changes in working conditions, and in one affecting thirty workers and causing ninety days' loss, increase in wages and shorter hours. Certain demands connected with union matters gave rise to six strikes involving 2,363 workers and resulting in 20,320 days or forty per cent. of the time loss. Of the remaining three strikes, one was sympathetic, one was in protest against machines that were said to be ineffective, and one in protest against an investigation by efficiency engineers.

As to results, eleven of the twenty-one strikes involving 1,389 workers and which had caused 26,575 days' loss, were settled in favour of the employers; four affecting 2,400 workers and causing a loss of 22,100 days were settled in favour of employees, and one involving 350 with 875 days lost was partially successful. Four strikes lapsed or were indefinite in their results and one was reported unterminated at the end of the fiscal year.

An analysis of the numbers affected and the duration of these industrial disputes shows that eight strikes involved twenty-five or fewer workers; three involved twenty-five to fifty workers; five involved ninety to 130; three involved 210 to 350; one involved 800, and one 1,800 workers. Of the sixteen disputes commenced and terminated during the fiscal year, eight strikes lasted one week or less; three lasted one to two weeks; two lasted two to three weeks, and three lasted more than four weeks.

Wages and Hours

Appended to this report will be found on pages 88 to 91, tables on rates of wages and hours of labour in the building trades, metal and printing trades in three or four cities of Ontario. Increases are indicated in many sections of the building industry and in several of the metal and printing trades. The only change in hours recorded in these industries is a slight decrease for plumbers in Toronto and Hamilton.

CHANGES IN PERSONNEL

During the fiscal year several changes were made in the personnel of the Department of Labour. Following the resignation from the Ontario Cabinet of the Honourable Dr. Forbes Godfrey, Minister of Health and Labour, the Honourable J. D. Monteith became Minister of Public Works and Labour in September, 1930.

It is with regret that the deaths of four members of the staff are recorded. In January, Mr. J. C. Spencer died, a member of the staff of the Employment Service and for many years superintendent first of the office at Ottawa and later at London; in March, Mr. Henry Brown, an inspector in the Boiler Inspection Branch, died suddenly one evening after a day spent as usual in the office. The factory inspectorate lost two of its members—Mr. A. J. Wright in March and Mr. T. B. Angrove in July. All four men had given faithful service in the Department of Labour and the Department has sustained a decided loss in their deaths.

The following appointments have been made to the staff: in the Employment Service, Col. William Rhoades was appointed as a special representative on behalf of ex-service men; Mr. A. E. Palmer was appointed as superintendent of the employment office at Sarnia; Mr. F. M. Higgins as superintendent of the employment office which was opened in Stratford in October, and Mr. Harry Wray was promoted to superintendent of the office at London. In the Factory Inspection Branch, Miss Nina Garden was appointed as inspector with headquarters in Hamilton, and Mr. W. C. Crozier in the Kingston district. Mr. W. J. Jordan was appointed as a second inspector attached to the Board of Examiners of Stationary and Hoisting Engineeers, and Mr. George Chambers became Assessment Officer in the Apprenticeship Branch.

The spirit of co-operation existing among the various branches of the Department of Labour has contributed largely to the measure of success attained by this Department. Shortly after the close of the fiscal year Mr. James H. H. Ballantyne resigned as Deputy Minister of Labour. My appointment to this position took place early in 1931 so that my short tenure of office does not fall within the period covered by this report. I wish, therefore, to acknowledge the assistance of the executive heads of the branches of the Department of Labour who have made possible the compilation of this report.

I have the honour to be, Sir,

Your obedient servant,

A. W. CRAWFORD,

Deputy Minister of Labour.

Labour Legislation, 1930

The Statutes of Ontario, 1930, contain the following Acts of interest to labour:—

1. An Act to amend the Old Age Pensions Act:

This amendment provides for the appointment of a local old age pensions board by a county, city or town council and that a member of the council may be appointed to the board and receive the same remuneration as when acting as a member of a committee of the council. A member of a council appointed to the board is not to be disqualified from being a member of the council because of his appointment to the board. The secretary of every local old age pensions board is empowered to take declarations and affidavits and to receive evidence under oath. For the purposes of the Act, Burlington Beach is recognized as a separate municipality and the Burlington Beach Commission is granted the same powers as a local board. Provision is made by appropriations of the Legislature for the payment of costs of pensions and of administration or out of the Consolidated Revenue Fund of the Province, in the absence of any such appropriation, dating from November 1st, 1929.

2. An Act to amend the Mothers' Allowances Act:

By this amendment the secretaries of local mothers' allowances boards are authorized to take declarations and affidavits and to receive evidence under oath. Burlington Beach is recognized as a separate municipality and the Burlington Beach Commission is granted the same powers as a local board for the purposes of the Act. Members of municipal councils may be appointed to local boards without being disqualified on this account for council membership.

3. An Amendment to the Apprenticeship Act:

Provision is made for the assessment of employers in designated trades in order to defray the costs of maintaining a system of apprenticeship and administering the Act.

4. An Act to amend the Silicosis Act:

By this Amendment a penalty is provided for non-compliance with the Act.

Ontario Government Offices, Employment Service of Canada

GENERAL SUPERINTENDENT—H. C. HUDSON

The Ontario Government Offices of the Employment Service of Canada were noticeably affected by the general industrial conditions which prevailed throughout the Dominion. The serious drop in stock and bond prices in November, 1929, was reflected immediately in the reduction of employment opportunities and the general improvement in business conditions which was freely prophesied for the spring of the year failed to materialize. It was therefore a difficult year for those engaged in public employment work, but the situation was faced bravely and effectively by the staffs of the various offices. It is my conviction, as General Superintendent, that the importance of the Employment Service of Canada is not yet fully realized. Each year, however, sees an improvement in this connection and the time will undoubtedly come when the value of the Service to the community at large will be more generally recognized.

The connection between the Employment Service and the influx of workers into this Province and this Dominion which is dealt with at some length later in this report is of tremendous importance, affecting as it does the employment of so many Canadian workers. The possibility of extending the work of the Service to include vocational guidance is another question which will have to be faced in the near future. In the following pages a summary has been given of the principal activities of the Ontario Employment Offices during the past year and recommendations have been included having as their objective the improvement of the work of the various offices.

The statistical table which appears elsewhere in this report reveals clearly the industrial conditions prevailing throughout the Province during the fiscal year. The total number of vacancies listed with the Service 155,514 represents a decrease of 14.9 per cent. as compared with 1929. This figure is interesting, inasmuch as general indices of trade conditions published by banks and other financial institutions showed an average drop of 15 per cent. in 1930 as compared with 1929.

The total number of applications, however, 237,367, showed an increase of 6.1 per cent. as compared with the previous year.

Placements as recorded by the Employment Service are designated as "Regular" or "Casual," the former being those where the employment is of two weeks' duration or longer. It is very significant that the regular placements in 1930 were 25.6 per cent. below those of 1929. The casual placements, on the other hand, show an increase of 11 per cent. The net decrease in the total placements is 11.2 per cent. which is interesting, indicating as it does that there was a greater willingness on the part of applicants to accept whatever employment was available. In other words, if the 1929 relationship of vacancies to placements had been maintained, the total placements for 1930 would have been in the neighbourhood of 136,000, instead of totalling 141,841, as was actually the case. The increase of 6.1 per cent. or 13,767 persons, also simplified the superintendents' problems in finding a man or woman to fill each listed vacancy.

VACANCIES, APPLICATIONS AND PLACEMENTS, FISCAL YEAR 1930

Offices	Vacancies	Applications	Placements		
			Regular	Casual	Totals
Belleville	1,866	2,009	900	904	1,804
Brantford	6,646	9,367	1,376	5,236	6,612

Totals, 1926	156,995	190,586	......	......	135,331

One of the most important questions connected with the administration of an employment service is the selection of the staff. The success or failure of an office depends, in the last analysis, upon the personality of the superintendent and his assistants. Applicants are entitled to courtesy and consideration and must be interviewed by men and women who possess the faculty of taking a personal interest in each individual case. The contacts made by the staff with employers and with various municipal officials are so delicate in many instances that the utmost tact is essential if whatever negotiations are under way are to be brought to a successful termination. Ability to write businesslike letters is also necessary as the efficiency of the Service is frequently measured solely by the nature of the correspondence which emanates from the various offices.

Other personal factors such as honesty, neatness, punctuality, etc., are highly important in selecting the members of an employment office staff. This is particularly true of offices located at a distance from Toronto where the personal supervision of the General Superintendent is, of necessity, infrequent. An efficient employment service like any other organization cannot be built up in a day. The work of registering and dealing with applicants for employment is difficult at any time, but is particularly hard during a period of depression. At such times the men who are out of work are in a high-strung condition and if not handled sympathetically can quite easily cause the administration a great deal of trouble. The friendly relationship which has prevailed between the staffs of the various offices and the applicants during the difficult winter of 1929-30 is a tribute to the capability of the superintendents and those working under their direction.

During the month of January, 1930, the Service suffered a severe blow in the loss of our London Office superintendent, Mr. J. C. Spencer. Mr. Spencer had been connected with the Employment Service since it was first organized and had acted as superintendent at Ottawa before being transferred to London. The Employment Service was represented at the funeral by the Deputy Minister of Labour, the General Superintendent and three local superintendents, as well as by the staff of the London Office. The position rendered vacant by the death of Mr. Spencer was filled by the appointment of Mr. Harry Wray, who had had several years' experience in the London Office.

At the Labour Day luncheon in connection with the Canadian National Exhibition, Premier G. Howard Ferguson announced the appointment of Col. Wm. Rhoades, D.S.O., M.C., as a special representative of the Employment Service on behalf of ex-service men. Col. Rhoades is establishing contacts with employers which should be effective in the placement of men who served overseas during the Great War.

The extent to which the work of the local employment offices is appreciated by the various municipal authorities throughout the Province is very gratifying. It is recognized in most cases that it is in the best interests of the municipalities to co-operate closely with the Employment Service and the arrangements already entered into in may centres will undoubtedly prove most effective in meeting the situation during the coming winter months.

Co-operation between the Technical Service Council and the Employment Service was highly beneficial throughout the year. The Council registered a large number of technical graduates of Canadian universities and in many instances was able to provide workers with the special training necessary to fill positions requiring a high degree of technical education combined with extensive experience. The effectiveness of the co-operation between the two services has been particularly noticeable in connection with importation request cases. The secretary of the Technical Service Council, Col. R. E. Smythe, also did a great deal of "missionary work" for the Employment Service in his various contacts with employers throughout the Province.

The policy of obtaining publicity for the Employment Service by means of weekly radio broadcasts was continued with very satisfactory results. A careful check of the response to the broadcasts would indicate that the radio audience for this weekly feature consists of at least ten thousand persons.. Employers appreciate having their orders for special types of workers "put on the air," and men and women who are out of work listen each week in the hope of hearing about positions for which they are qualified. The Department is indebted to the owners of radio station CKCL for allowing us time on the air without charge each Wednesday evening.

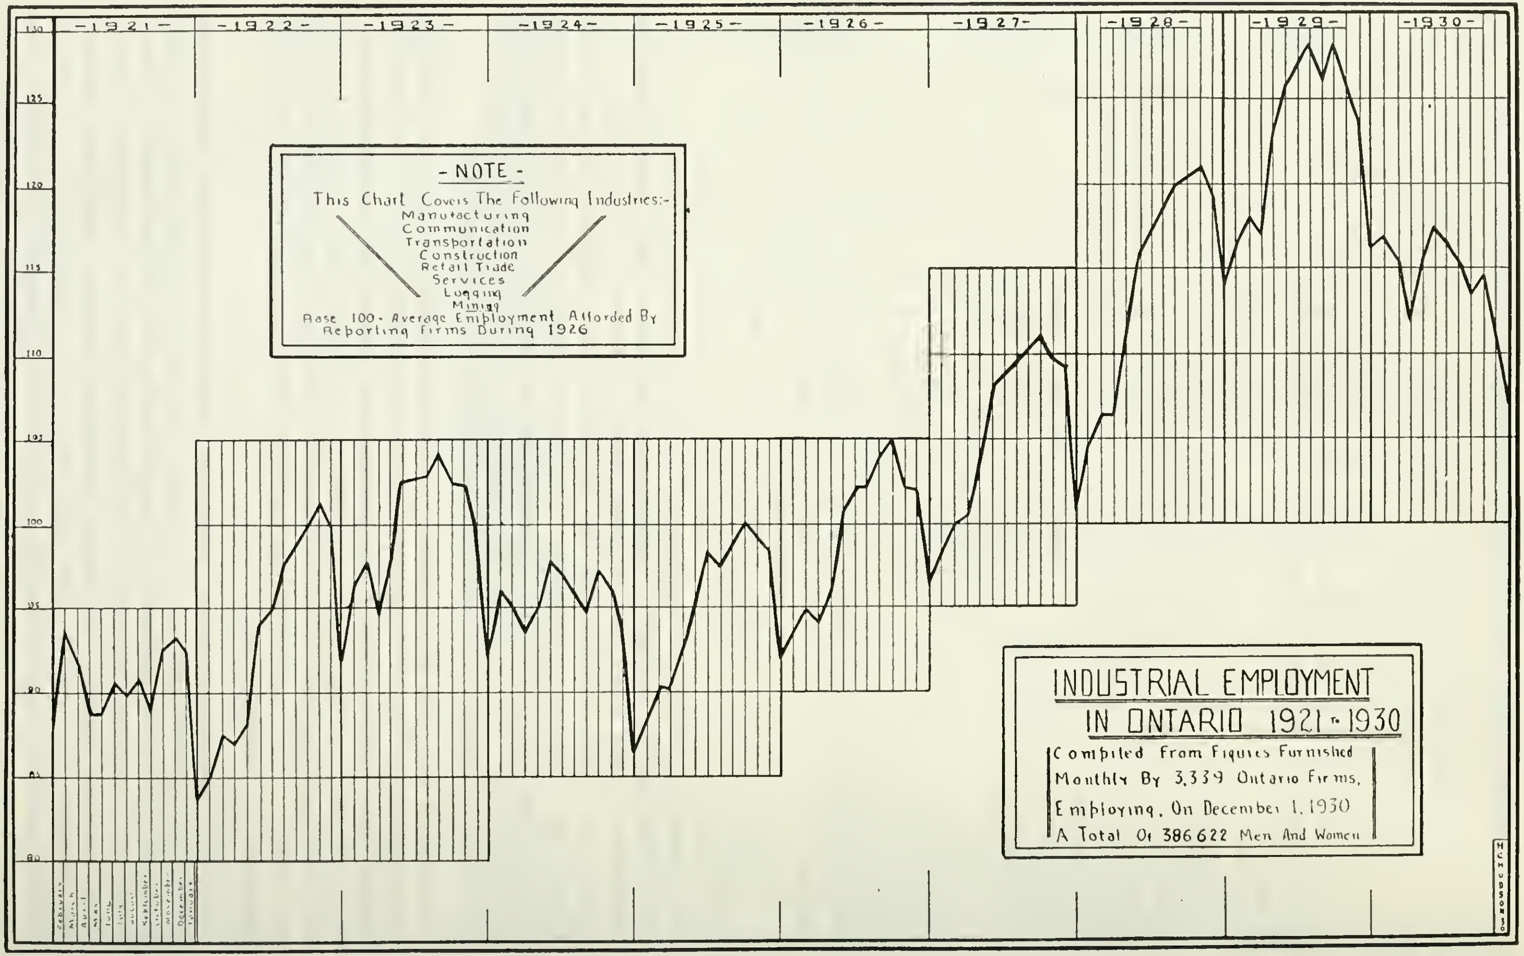
During the month of September, 1930, the Eighteenth Annual Convention of the Association of Public Employment Services of the United States and Canada was held in the Royal York Hotel in Toronto. The sessions of the convention were attended by all Ontario Office Superintendents of the Employment Service of Canada. The papers presented and the discussions which followed were of a very high order and proved of real value to the Ontario representatives. The General Superintendent of the Ontario Offices of the Employment Services was re-elected as President of the Association.

For the first time in the history of the Employment Service the aeroplane was used as a means of transportation for one of its officials. On April 29th, the General Superintendent flew to Ottawa in connection with an urgent importation request case, returning to Toronto the same evening. This medium of transportation saved an entire day, as compared with any other method of reaching the capital. The total travelling time was five hours and fifteen minutes, as compared with fifteen hours by train.

One of the comparatively recent and exceedingly important developments in the work of the Employment Service of Canada is the system of co-operation with the Federal Department of Immigration in the administration of what is virtually a Contract Labour Law. Under the terms of an Order-in-Council which has been in effect for the last two years, Canadian employers wishing to bring workers into Canada from any other country must first file an order for the required help with the Employment Service of Canada. The order is then circulated throughout the entire length and breadth of the Dominion in order



INDUSTRIAL EMPLOYMENT
IN ONTARIO 1921 - 1930
Compiled From Figures Furnished
Monthly By 3,339 Ontario Firms,
Employing, On December 1, 1930
A Total Of 386 622 Men And Women

to give every office a chance to secure the man or woman required. If an applicant possessing the required qualifications presents himself at any of the offices, the employer's request for importation may be refused. This measure is undoubtedly one of the best passed in recent years by the Dominion Government, assuring, as it does protection to the citizens of Canada. Because of the importance of this question, and in order to show the wide variety of jobs covered by this scheme during the fiscal year under examination, the list of these which originated in the Province of Ontario will be found below:

LIST OF IMPORTATION REQUESTS—ONTARIO OFFICES, 1929-30

Position	Salary
Belleville—Tour boss as assistant superintendent of paper board mill	$225 month
Brantford—Foreman of woollen goods finishing department	$65 week
Chatham—Foreman of glass feeder department in manufacture of glass bottles	$35 week
Glass mould maker in the manufacture of glass bottles	$45 week
Cobalt—Three performers for travelling show	$35 week
Hamilton—Travelling representative for metal cutting trade	$125 month
Two roll turners for cutting shapes in steel and iron works	70 cts. hour
Two expert service men for harvester threshers and power machinery	$150 month
Expert roller to take charge Universal Plate rolling mill in foundry	$300 month and bonus
Sub-foreman, awning maker	50 cts. hour
Plant chemical engineer as soap expert	$275 month
Wine chemist on German wines	$40 week
Kitchener—Superintendent and efficiency expert of plant manufacturing corrugated containers, etc	$3,000 to $3,500 year
Pretzel baker for bakery	$30 week and bonus
London—One supervisor with full knowledge of enamelling industry to instruct operators in handling of washing machine tubs	60 cts. hour
Industrial production engineer for enamelled ware	$35–$40 week
Two to four salesmen for electric refrigeration equipment	$200–$250 month
Supervising engineer with knowledge of oil burners, electric refrigeration, water system, etc	$50 week
Fancy leather cutter for shoe manufacture	$35 week
Fancy stitcher for shoe manufacture	$25 week
Expert pen artist on photo lithographic work	$50 week
Niagara Falls—Blast furnace superintendent	—
Chef to buy supplies and take full charge of kitchen help in golf and country club	$50 week
Twenty-two chefs, cooks, butchers, bakers, etc., for hotel	$100–$350 month
Steward, chef, waiter, cook, etc., for golf and country club	$75–$250 month
Night chef for hotel	$175 month and board
Assistant comptroller, auditor, housekeeper, pastry chef, etc	$65–$200 month
Ottawa—Marble setter	$1.25 hour
Oshawa—Assistant toolroom foreman in manufacture of stamping dies for automobile frames	—
St. Catharines—Two sales engineers for locating and developing markets at home and abroad for slide fastener business	$25 week
Assistant foreman for assembling of generators	50 cts. hour
Production manager for automobile parts and hardware	$220 month
Motor generator field coil winder	50 cts. hour
Tool designer Delco Remy machinery	85 cts. hour
Sault Ste. Marie—Pneumatic caulkers for high pressure steel construction	$1.00 hour
Sudbury—Twenty lead burners for lining iron tanks with sheet lead	$1.33⅓ hour
Toronto—Two screen printers on textiles	$30–$40 week
Female hairdresser for beauty parlour	$25 week
Credit manager with college education and knowledge of economics for investigation of credit dealings, employment, character, etc.	$100 month
Embroidery stitcher to operate automatic looms	$50 week
Two radial brick chimney foremen	$75 and $80 week
Tour boss paperboard mill	$250 month
Female coil winder for transformers	$32 week
Production manager for lacquer varnish and paint departments	$150 month
Female hairdresser for beauty salon work	$30 week and commission
Two male coiffeurs with Parisian training	$40 week

LIST OF IMPORTATION REQUESTS—ONTARIO OFFICES, 1929-1930—Continued

Toronto—Continued	Position	Salary
	A double bass player for orchestra	$30 week
	Two female clerks	$75 and $80 month
	Radial brick chimney foreman	$80 week
	Chimney bricklayer	$66 week
	Chimney topman	85 cts. hour
	Manager for assembly department of electrical insulators and wiring devices	$65 week
	Expert embosser for press and hand moulding of leather goods	$25 week
	Six electrotypers for catalogue work	$45 week
	Electrical engineer for research work in connection with transmission and distribution systems	$175 month
	Technical officer for advising and estimating in manufacture of electric fuses, switchboards, etc.	$40 week
	Department manager for lunchenette and soda fountain	$40 week
	Assistant superintendent for dyehouse to supervise the dyeing of yarn for oriental carpets	$55 week
	Beater engineer in boxboard factory	80 cts. hour
	Foreman for umbrella factory	$40–$50 week
	Lithographic map writer	$45 week
	Plant superintendent for manufacture of loose-leaf products	$5,500 year
	Demonstrator and service man on paint material	$150 month
	Construction, fireproofing and acoustical engineer	$250 month
	Hydraulic engineer for excavation and water supply	$250 month
	Wallpaper designer	$180 month
	Hairdress to design hair bobbing and waving	$50 week
	Six electrotypers for special catalogue work	$50 week
	Hairdresser	$40 week plus 10 per cent.
	Fashion artist for special catalogue work	$150 week
	Enamel plant foreman in manufacture of electrical conductors, enamelled wire, etc.	$45 week
	Foreman to supervise assembly and radio cabinets	$35–$50 week
	Kiln fireman for porcelain and electrical products plant	$35 week
	Superintendent for porcelain and electrical products plant	$100 week
	Four stone carvers	$12.00 day
	Mechanical superintendent for repair and manufacture of gasoline and steam shovels	$450 month
	Brew master for brewery	—
Windsor	Electro-plating and chemical engineer	$4,000 year
	Shields automatic bottler	$35 week
	Bus mechanic for transportation company	$37.50 week
	Spotter—technical man on dyes, chemicals and textiles for taking out difficult stains	$8.50–$10 day
	Hair cutter and finger waver	—
	Plastic surgery embalmer	$100 month
	Embalmer	$25 week

A complete report of the placements of the Handicap Section of the Toronto Office will be on pages 38, 39. Below is a table of the applications and placements among disabled ex-service men in ten of the offices of the Province. It is gratifying to note that the various superintendents were able to place in positions of greater or less duration almost 4,000 disabled ex-service men.

	Applications	Placements		
		Casual	Regular	Total
Brantford	65	49	1	50
Fort William	11	...	...	...
Hamilton	759	283	72	355

Toronto	5,243	2,184	703	2,887
Windsor	36	6	11	17
	6,984	2,675	1,251	3,926

BELLEVILLE

While no new industries commenced operations in Belleville during the past year, there were a large number of relatively small plants which reported a production only slightly below normal. The construction of a $200,000 filtration plant and two bridges provided considerable employment during the year. Many residents of this Province do not realize that ocean going boats frequently called at Belleville for cargoes. In such cases forty or fifty labourers are engaged as casual workers for three or four days, depending upon the capacity of the vessel. The Belleville Office Superintendent represents the Ontario Department of Immigration and Colonization, and while the activities so far as immigration is concerned were greatly curtailed during the past year, a few farm placements were made in the Belleville district.

BRANTFORD

The following extracts from the report of the Brantford Office Superintendent have been selected to indicate the trend of employment conditions in that city during the past year:

> "Attributable to the downward trend in the trade and commerce of the world, the city of Brantford, being Canada's fourth exporting centre of manufactured products, experienced a persistent slackening of industrial activity from the very beginning of the year. For some time it was apparent that several plants in Brantford were manufacturing in anticipation of future requirements. The failure, however, of the wheat crop to move to the world markets had the effect of reduced sales particularly of agricultural implements. The result was that considerable quantities of implements and other manufactured products were retained in the warehouses, thus accentuating a persistently difficult unemployment problem. The curtailment of the motor vehicle production programmes also adversely affected at least three local plants."
>
> "Intermittent schemes for the purpose of providing work on part time were adopted periodically by the municipal authorities, but at no time was it possible to find anything approaching a sufficient amount of work to provide for the needs of unemployed persons and those dependent upon them, and civic relief in the form of orders for food had to be supplied through a relief office maintained throughout the year by the city. Beginning in September, in anticipation of Federal and Provincial assistance, the municipal authorities adopted a much more advanced method to meet an admittedly serious situation and at present our Service is placing upon city public works crews of approximately three hundred men every three days. This plan obviously cannot be expected to provide for the necessities of life, the payment of rent, etc., but it at least gives some encouragement to those who have been without employment for a protracted period."
>
> "Our Service has co-operated throughout the year with the municipal authorities in an endeavour to meet the problem of unemployment and to alleviate as much as possible a condition that has many distressing features. In this connection twelve regular and 3,796 casual, or a total of 3,808 placements, were made on city works."

The farm demand was lower than during the preceding year due to three principal factors. The first was the tendency on the part of farm workers to change their jobs less frequently. The second was the number of farmers' sons who remained at home instead of seeking urban employment. The third and possibly most important factor was the tendency on the part of unemployed workers to canvass the entire countryside on foot or in light cars in search of employment.

CHATHAM

The restriction of credit and the general shortage of money affected the farmers of the Chatham district and, as stated in the preceding paragraph, farm placements showed a marked reduction. The outstanding feature of the employment situation during the year was the amount of construction work available. Large paving contracts and an extensive road construction programme furnished employment to the largest number of men who have worked at this occupation for many years. In addition, the City of Chatham had under way a sewer and street widening project involving an expenditure of over one-quarter million dollars, while the construction of two bridges added considerably to the volume of employment available. The "run" in the canning industry was six weeks longer than in 1929 and the number of men and women employed was double that of previous years. In the month of September alone more than two hundred women were brought in from outside points through the Employment Service to meet the demand of the canning factories in Chatham. Increased acreage under cultivation for sugar beets provided more work than usual in this industry.

COBALT

While Cobalt is essentially a mining town, the largest number of placements in any single industry reported by the Cobalt Office was in lumbering, with construction second and mining third. The clearance system was responsible for bringing 233 applicants into the district for jobs in the lumber camps.

An interesting development is the increasing demand for cobalt which is being used as an alloy with iron for the magnets of radio sets and other light electric equipment. It results in a saving in weight of 25 per cent. with largely increased facility to receive and throw out electric charges. In the past, the cobalt encountered in the mines was simply thrown out on the dumps, and there has been much activity and many men employed in picking over the old dumps. For this work the man receives three cents per pound for cobalt and five cents per pound for silver. The standard bag provided should weigh 125 pounds when full and the men are provided with hammers and expected to knock off all superfluous rock.

The Cobalt Office Superintendent avails himself of every opportunity to persuade young men to learn a trade. Employment conditions are keenly competitive in Northern Ontario and the man who is not a tradesman is handicapped in his search for work, particularly when the volume of employment is limited as at present.

FORT WILLIAM

The placements made by the Fort William Office of the Employment Service show a marked reduction as compared with 1929. The local pulp mills curtailed their purchases to such an extent that it was not necessary for the farmers to hire additional help for the purpose of completing their contracts. Ten employers who had 830 men working in November, 1929, had not employed any help whatsoever on November 1st, 1930. The falling off in the demand for pulpwood, combined with the wheat situation, was reflected in practically every branch of trade and industry in the Fort William area.

Commenting upon the placement of farm workers in the Fort William district, the superintendent reports as below:

> "In the farm section we are able to report our greatest and practically our only gains. The placements in this section are 461 for the year as compared with 168 in 1929. These placements are straight farm placements and are due in a large extent to the heavy demand for men for harvesting root crops throughout the district. It is perhaps interesting to review the farm placements a little more closely than usual, more particuarly in view of the fact that this section has increased from three per cent. of the total placements of the office, to 12 per cent. this year.
>
> "In 1927 we had a farm placement of 214, of this number thirty-five were harvesters for the Western Provinces, leaving a local placement of 179. For 1928 our local placement was 200, and 388 were sent to Western harvest fields. The year 1929 shows a local placement of 158, with ten sent to Western harvest. The present year shows a local placement of 461. This is due to two causes, the excellent growing season and the fact that more local farmers are beginning to require help with their farm work.
>
> "It is interesting to note that many of these employers are New Canadians, and it has been noted during the past few years that more people in this district are realizing that the development of our agricultural areas adjacent to the head of the lakes is of prime importance and offers a steadier field of employment than many of the other lines adopted in this district. In explanation of the statement at the commencement of this section, that these were straight farm placements, I refer to the numbers of men taken by farmers in the past for the cutting of pulp wood and cord wood. These placements are always shown as logging placements and not as farm. If these placements were classed with farm placements, it would be seen that the farmer enters largely into the employment factor of the district. These are points which are often overlooked by all not actually engaged in employment work. I am of the opinion that if this factor were taken up with the proper authorities much more would be done to assist the farmers of this district who are, without doubt, working against heavy odds, possibly found nowhere else in the Dominion of Canada."

Extensive structural alterations to the interior of the Fort William Office resulted in a marked increase in the number of placements of women. One hundred and eight placements of women were made during the year, which may be considered as very satisfactory in view of general employment conditions.

Guelph

A reduction of 22.4 per cent. in the placements of the Guelph Office indicates the general falling off in employment opportunities in that city. Most of the factories operated during the year with reduced staffs and on short time. While a fairly extensive building programme was carried on in 1930, a high percentage of the workers particularly on one big job were brought in by the contractors from other centres. As reported elsewhere, farm employers were able to hire "at the gate" instead of applying to the local employment office. This was due to the large numbers of men who were looking for employment on foot or in automobiles.

HAMILTON—MEN'S DIVISION

The table of applications, vacancies and placements, which appears elsewhere in this report, indicates that some offices placed more men in positions during 1930 than in the preceding year. In practically every instance this increase is explained by the fact that municipal unemployment relief work was carried on through the local office. In the case of Hamilton, however, which shows a decrease of 50.4 per cent., the reduction represents the extent of the falling off in general trade and industrial conditions. Hamilton's unemployment relief projects are carried on by the municipal authorities exclusively. Manufacturing, construction, transportation and, in fact, every branch of industry, report a serious situation during 1930 with employment at its lowest ebb since 1921. Coincident with the reduction in vacancies for able-bodied workers, there was a falling off in the opportunities for handicapped men. The extent of the problem in this connection is shown by the fact that 723 handicapped workers registered at the Hamilton Office during the year. Of this number, seventy-four were placed in permanent positions and casual employment was found for 259. The opening of a special branch for handicapped men is recommended by the superintendent of the local office.

WOMEN'S DIVISION

While the placement of men fell to one-half of the 1929 figure, there was only a slight reduction in the total numbers of placements in the Women's Division. During the twelve months under review, 1,040 permanent and 3,164 casual placements were made. The corresponding figures for 1929 were 1,131 and 3,943. The demand from the manufacturing plants was almost nil, except for the occasional experienced worker. There was, however, a shortage of experienced cooks-general reported by the office.

KINGSTON

As in many other centres in the Province, the local superintendent in Kingston makes a definite attempt to persuade certain men that it is to their own advantage to accept farm employment. The success of these efforts is shown by the number of farm placements effected by the office. Manufacturing conditions were exceptionally favourable in Kingston during the first ten months of the fiscal year. The locomotive works, for example, at one time had a working force of 600 men. In common with the other sections of the Province, however, employment slackened off perceptibly in the manufacturing industries before the end of the fiscal year. Construction work was fairly active throughout the major portion of the year, an elevator job and an addition to the Nichol Wing at Queen's University Hospital being the principal projects under way. An unusual order called for twenty-five men to clean up the debris following a fire which destroyed a residence costing $180,000. In every instance, men engaged by the city for unemployment relief work must be hired through the local office. On several different occasions, very complimentary comments have been made as to the success of this plan of co-operation.

The demand for domestics during the year was always goods. At all times there were vacancies for first-class cooks and cooks-general. A number of

British trainees who had eight weeks training at a hostel in London were brought to the city by the Women's Branch of the Colonization Department of the Federal Government. These girls started to arrive in Canada about the middle of February, reporting to the local office. There was no difficulty in placing them. The girls on arrival in Kingston were given a twenty-four rest at the local Y.W.C.A., reporting to this office on the following day. The demand for domestics for summer resorts and hotels in this vicinity started in May and good results were obtained in meeting the situation.

KITCHENER

The spirit which animates the Employment Service staff is exemplified in the following extract from the report of the Kitchener Office Superintendent:

> "The Employment Service has again proved its worth to the community, not only as an employment office, which is its major duty, but it has rendered many other services to the public which take time and effort and eventually bring business to the office. The members of the staff of the Kitchener Office have attempted to perform their duty to the best of their ability without any consideration for time or circumstance, giving their serious attention to every task placed before them."

Conditions in the rubber tire industry have been unsatisfactory and the firms manufacturing rubber footwear have also suffered. In the latter industry the introduction of labour-saving machinery has made it possible to produce more rubber shoes by machinery than skilled men had previously been able to make by hand. As a result, a considerable number of men who had devoted their entire working lives to the art of rubber shoe-making were compelled to seek other occupations. While three of the larger furniture factories reported a satisfactory year's business, the industry generally was not prosperous. The destruction by fire of two large furniture factories was also responsible for the unemployment of almost one hundred workers. Like other offices, the Kitchener Office lost many farm placements as a result of the tendency on the part of the workers to travel through the district in search of employment.

LONDON

Reporting upon the placements of farm help in the London district, the superintendent stated that the influx of immigrants into the district who were willing to accept wages below the current rate had made it difficult for the Employment Service to maintain its usual volume of business in this direction.

As in other sections of the Province, manufacturing was below normal and there was a consequent reduction in the number of placements made in the local industries. On the other hand, it is interesting to note that orders for skilled mechanics were received from Stratford, Strathroy, Ingersoll and Windsor and these were filled from among the applicants registered in London. This indicates the extent to which a local office can serve not only the municipality in which it is located but also can be of assistance to the entire district.

Construction work absorbed the largest number of men as considerable building was done during the year. In addition, the C.N.R. utilized the office exclusively for recording men in connection with track maintenance work. Some orders were also received for track workers from the C.P.R.

Placements on city relief work between January and April were made through the local Employment Office.

During the year, 32 regular and 26 casual placements were made from among the group of handicapped ex-service men registered at the office. The highest number of disabled men registered at any one time was 100 in March.

The majority of girls registering in the Women's Division for work in the manufacturing industries during the year were unskilled. On account of the reduced demand for workers, however, the orders for help usually called for experienced girls and young women. As a result, there was a slight decrease in the total number of placements during the twelve months under review.

In London, as elsewhere in the Province, there appears to be a surplus of office workers graduating from high schools and business colleges. On account of the low turnover in the majority of offices and stores throughout the city placements were noticeably below normal.

For the first time in many years the supply of valuable household workers was in excess of the demand. In spite of this condition, it remains difficult to persuade domestics to leave London either for farm employment or for work in the smaller towns in the district. The lower wages which are offered is a determining factor in this connection in some instances but in many cases the applicants expressed a dislike for the rural districts on account of the lack of opportunities for recreation.

NIAGARA FALLS

Although the fruit crop in the Niagara district was well up to the average the demand for fruit pickers registered at the local office was below normal. Owing to the number of workers seeking their own jobs, wages registered a decline of approximately thirty per cent. as compared with the previous year.

The industries of Niagara Falls are widely diversified and as a result the depression did not bear quite so heavily on that city as on some other centres. At the conclusion of the year textile, cereal and canning factories were operating at a normal production basis with very encouraging prospects ahead. In the case of the textile industry, recent tariff changes were responsible for the increased activity. The completion of the Welland Canal released a large number of construction workers, many of whom, however, returned to their homes in other sections of the Dominion. Three new industries located in Niagara Falls during the year, an abrasive plant, a leather goods manufacturing plant and a pump company. The main building projects carried on included the reconstruction of the post office building, the erection of the Federal Building, the extension of a large plant at Chippewa and the construction of a new municipal filtration plant. The iron and steel industries in Welland were severely hit by the depression but at the end of the year the textile plants in the same city resumed operations on a full time basis. While there were fewer building permits issued as compared with 1929, the construction of a new Vocational School, a building for the Hydro-Electric Commission and an office building for the Provincial Natural Gas Company, provided considerable employment for construction workers. The principal industries in bridge work have been operating on short time and at the end of the fiscal year there were approximately 225 men unemployed. Many of these had been engaged in railroad work in the Bridgeburg yard. A project which furnished some employment was the removal of the buildings at the Erie Beach Amusement Park and the subdivision of the park into building lots.

North Bay

North Bay, the "Gateway to the North," is an important centre for the distribution of labour. Typical extracts from the report of the local superintendent are here given:

> "With the spirit of pessimism prevailing in the logging industry throughout the summer, it could be seen that logging would not be undertaken extensively. It was thought for a time that the concessions granted to the lumbermen by the Ontario Government would stimulate the industry but it is doubtful, even though all the concessions requested have been granted, if the operators would have gone in on as great a scale as previous years. At the present time, November, 1930, it can be safely stated that operations are 60 per cent. less than at this time one year ago with wages down by 43 per cent. It is an unfortunate state of affairs for the many thousand of unemployed who every winter gravitate to Northern Ontario which is looked upon as the natural 'stamping-ground' for cold weather employment.
>
> "From information received, it would appear that about 50 per cent. less pulp will be taken out during the coming winter, due partly to the large reserves on hand and to the Russian export. It is said that nearly five million dollars worth of pulp was exported to the United States during the year. Although this aspect may have been exaggerated somewhat, there is no doubt that it is making some inroads in our export trade and will later constitute a serious problem.
>
> "Although a definite amount of highway construction was accomplished at different places, it was difficult to place applicants owing to the large amount of personal applications made to the foremen on the different jobs. One engineer in charge of a stretch of road twenty-five miles from this city stated that he was asked for work on an average of fifty times per day during June, July, and August. For the coming year a considerable programme of road construction is contemplated and if carried out should be of immense help by taking care of a vast army of unskilled workers.
>
> "After a very poor start at the beginning of the year, North Bay developed a large building programme which in the course of time was put in execution. At the present moment, $1,000,000 worth of construction is being carried out, a greater amount than at any time in the history of the city. While it is of great help and employs large numbers of tradesmen, it is not of as much benefit to the unskilled of the community as would the same amount of money put in residential work. These big buildings being built almost entirely of steel, brick, cement or stone, employ mostly skilled hands who have to be imported while our local men look on."

During the year 1,184 men were transferred out of the North Bay zone, through the medium of the clearance system. This illustrates the desirability of such a method of distributing labour. The number transferred, however, was 503 less than in 1929.

Concluding his report the North Bay Superintendent pays tribute to the whole-hearted spirit of co-operation between the various offices of the Service. This co-operation between the various offices, he states, "maintains our interest in our work one hundred per cent."

OSHAWA

In Oshawa, one of the leading centres of the automobile industry in Ontario, there was a reduction of 275 in the total number of placements made by the local office. A very large percentage of the placements, however, was on city relief work, as the closest possible co-operation exists between the municipal authorities and the Employment Service. For the first time in many years, the superintendent reported a surplus of farm workers as compared with the demand. Farm employers offered slightly lower wages than in 1929 and also showed a tendency to hire men on a monthly basis rather than for six or seven month periods as in the past.

Evidence as to general employment conditions in Oshawa is seen in the marked reduction in the number of placements made by the Women's Division. Thoroughly experienced domestics, however, were always in demand throughout the year and were readily placed in positions.

OTTAWA

The outstanding feature of the work of the Ottawa Office during the year was the completion of long continued negotiations having as their objective closer co-operation between the Employment Service and the municipal authorities. Various factors which were involved made it exceptionally difficult to arrange for the Employment Office to handle the placement of civic employees on relief work. Since the plan was adopted, however, it has met with general approval.

Another outstanding achievement of the year was the gain by the local Employment Office through the co-operation of a well-known Ottawa physician who is the owner and operator of a broadcasting station. At considerable expense to himself this ardent supporter of the Employment Service devoted on an average three hours each week to publicity for the local Employment Office and was largely instrumental in obtaining literally hundreds of jobs and also played a prominent part in the organization of relief activities on behalf of unemployed workers.

In the Women's Division the demand for maids equalled that during the previous year but the number of applicants showed a noticeable increase. As in the case of Oshawa, thoroughly competent domestic workers were placed quite easily but the demand for the less competent types of workers was below that of former years.

An unusual placement made by the office was that of a children's governess who will spend the next few years in Egypt, the employer having been transferred to that country as a trade commissioner.

A reduction in the wages paid to stenographers is reported by the Women's Division and is explained by the curtailment of general business activities.

PEMBROKE

The reduction in the volume of manufacturing and construction throughout the Dominion was reflected in the curtailed activities of the lumber industries operating in and from Pembroke. On the other hand a concern manufacturing all steel office and school equipment reported a very satisfactory year's business.

The expenditure on highway construction in the Pembroke district was in advance of previous years and considerable work remains unfinished on various stretches of the highway between Pembroke and North Bay.

PETERBOROUGH

As Peterborough is a manufacturing centre, the depression resulted in a noticeable falling off in the amount of employment available. This naturally brought an increased number of applicants to the local office and the superintendent reported that a surprisingly large percentage of them were men and women who never before had experienced a prolonged period of unemployment. The local theatres and the local press co-operated in urging that temporary employment should be provided and this co-operation helped greatly to relieve the situation for many workers.

PORT ARTHUR

Port Arthur is one of the centres where the much talked of condition of over-production is evident even to the casual observer. At the end of the fiscal year grain elevators were filled to capacity and the paper mills were overstocked with pulp wood. This condition reacted upon the transportation mediums, both lake and rail, and was responsible for marked unemployment in this industrial group.

Evidence of the co-operation between the Employment Office and the local newspapers was seen in the frequent references to employment conditions which appeared throughout the year both in the news and editorial columns. That the civic authorities have every confidence in this office was revealed in the fall when the placement of men on unemployment relief projects was delegated to the Employment Service.

While the number of farm employees in the Port Arthur district is necessarily limited by the geographical conditions of the district, it is interesting to note that quite a few farm placements were made during the year and that the wages offered were slightly higher than in the southern portions of the Province. On the last day of the fiscal year, grain in storage at the head of the lakes totalled 71,000,000 bushels. The total storage capacity in the Twin Cities was 88,000,000 bushels and additional grain was coming in from the West at the rate of 500 cars per day.

ST. CATHARINES

Towards the end of the summer the municipal authorities in St. Catharines took steps to provide unemployment relief work and employed forty men a week beautifying the parks of the city and in laying out a new park. Commenting upon a situation with regard to unemployment relief work, the superintendent writes as below:

> "As this work is now finished, the city has been providing work for 400 men on the week-about principle. The plan adopted shows a real interest and understanding of the situation by the special committee appointed by the City Council to handle both employment and straight relief. Married men, regardless of nationality, with five or more small children are being given steady employment and the others with a lesser number, week about. Married men, where the wife is not working, together with single men who are the main or sole support of widowed mother or

incapacitated parent are also being supplied with work week about. Single men are being handled according to circumstances, but very few can be supplied with employment. All employment is handled through our office and the city has supplied an extra clerk to assist with this work. A relief office has been provided where straight relief is being given to those who cannot be found work and in this connection a number of citizens, two members of the police force, together with a number of city employees, are being utilized in investigating cases of those who apply for relief. A proper registration of all unemployed men was carried out by the city under the supervision of the local office."

The report of the local office also calls attention to the large number of young men who are unable to find industrial employment and either not eligible or physically unable to do unemployment relief work. As this group represents the future citizenship of St. Catharines, it is recommended that they be provided with facilities for further education in Technical Schools or elsewhere. An encouraging feature of the situation so far as the future prospects are concerned is seen in the fact that five additional plants are about to commence operations in the St. Catharines district.

ST. THOMAS

Although the placements for the St. Thomas Office showed a reduction of approximately 30 per cent. as compared with the preceding year, it is interesting to note that the superintendent reported an increase of sixty-eight in the number of farm workers placed in the district.

Evidence of the effectiveness of the employment clearance system among the offices is shown in the fact that during the year, in spite of the general industrial situation, bushmen were transferred to Timmins, pipe fitters to Kingston, and six women as factory workers to Chatham.

SARNIA

During the year 1930 the Sarnia Office was instrumental in making 132 farm placements. This represents an increase of 86 over the number of farm placements during the preceding year and is an evidence of the results which sometimes follow an intensive canvass for orders.

The industries in Sarnia depend to a large extent upon the automobile trade for their orders and consequently were slack during the year. A large number of boiler makers, welders and labourers were employed during the summer months in connection with the construction of storage tanks for the Imperial Oil Company. Early in the calendar year it was necessary to call upon the Windsor Office to fill an order for tool and die makers and special machine operators and once again the effectiveness of the clearance system was clearly demonstrated.

At the end of the year the construction of a new Government dock and a sewer commenced by the city as a relief measure was providing employment for many of the unskilled workers of the city.

As in the case of the other lake ports, the demand for marine help was very poor when compared with other years. An interesting order testifies to the efficiency of the local superintendent who was asked to line up a complete crew for the steamer *Crosbie* to be ready for the reopening of navigation in the spring of 1931.

SAULT STE. MARIE

On account of the nature of the district surrounding Sault Ste. Marie, comparatively little farm work is carried on in the immediate vicinity. The local Employment Office, however, placed 120 men in farm employment during the year. There was a noticeable downward tendency in the wages offered. The reduction in woods operations in 1930 as compared with 1929 may be seen from the case of one company which had 1,360 men on its pay list in the Soo district in October, 1929, and 135 men in its employ in October, 1930. Owing to the curtailment of lumbering operations in the district for the 1930-31 season not a single order for bushmen was received by the local office during the months of September and October, whereas under ordinary conditions at least 200 men would be hired through the office.

The reduction in building costs has been responsible for the commencement of several important projects in and near Sault Ste. Marie. The largest individual project was the construction of a new hotel.

Extensive mining operations are being carried on in the vicinity of Sault Ste. Marie, several old properties having been reopened and developed as gold producers. Prospectors have also uncovered several large veins said to carry silver and lead values south of the Michipicoten River and it is hoped that the development of these properties will provide considerable employment.

The report furnished by the superintendent with regard to both rail and water transportation is very similar to the information supplied by superintendents at the other lake ports. There was a decided decline in the number of sailors, deckhand and railroad workers asked for by the various transportation companies.

STRATFORD

On October 20th, 1930, a branch of the Employment Service was opened in the city of Stratford with Floyd M. Higgins as Superintendent. A central location was chosen and local employers were canvassed and their co-operation was promised in almost every instance. It is expected that the Stratford Office will fill a real need in the city and district.

SUDBURY

Below will be found extracts from the report of the Sudbury Office Superintendent:

> "During the past year our placement of workers showed a total of about 1,400 below the number of applicants placed the preceding year. The general industrial depression was felt to some extent in this city throughout the past year but this condition was more evident during the last six months of the period covered by this report. Lumbering, which includes the pulpwood industry, is considered usually as providing the greatest opportunity for employment in this district. The logging season 1929-30, although somewhat curtailed, was considered as being quite good which helped our placements for the first half of the year, but operations in this group for season 1930-31 will not exceed 25 per cent. of the

cut for the year previous. This accounts for part of the drop in our total placements for the year under review. Next in importance, the railroads usually employ in this district from 2,000 to 3,000 men through this office annually. This year this has accounted for only about 30 per cent. of the usual demand for workers. Mining, which we consider as third place in importance in supplying opportunities for the placement of applicants, although quite active during the year, did not provide enough jobs for the number of men seeking this class of employment.

"Building has had another big year in Sudbury in the construction work of the International Nickle Company at the Frood mine and a new smelter and refinery at Copper Cliff; also an acid plant for the Canadian Industries Limited, and a large refinery for the Ontario Refineries Limited. The last two mentioned were also built in Copper Cliff four miles from this city. Many new business blocks and over 500 new houses were erected in Sudbury during the past year. The many contractors interested in the above mentioned building projects gave this office their full support and co-operation during the year which accounted for a great percentage of our number of placements for the period reviewed.

"The employers in general are showing increasing confidence in the Employment Service of Canada having the ability to provide them with all necessary help and the interest taken in selecting suitable workmen for them."

Timmins

The first half of the fiscal year was exceptionally busy and the clearance system was used extensively to bring in men from practically every section of the Province. This fall, however, the local supply of workers was in excess of the demand and it was unnecessary to seek the aid of other centres in filling orders for lumber workers. One of the larger lumber companies unfortunately lost its mill through a fire shortly after the conclusion of the summer's cut. This will mean a reduction in employment opportunities during the winter months as well as during the summer of 1931 as the new mill will not be ready to take care of next year's cut.

Reporting on the mining situation in the Timmins district, the superintendent writes as below:

"Mining in this district has certainly been the bright spot during the past year as far as construction work is concerned. The Dome Mines at South Porcupine started on the construction of their new mill early this summer and have only just completed it. It is now running and the majority of the men who were laid off at the time of the fire have returned to work. A number of them were taken care of during the building programme. The McIntyre Mine at Schumacher started the building of their new mill late this summer and will carry through the winter on it; this is also taking care of a lot of skilled and unskilled men. Their old mill is still running and will continue to do so until the new mill is ready to operate. Four other properties are running, two of which are producers. There has been very little work done in Kamiskotia where the new finds of copper were discovered some few years ago. No doubt this part of the country will receive more attention when conditions generally improve throughout the country. A new discovery of gold was also made this fall

> in the Matatchewan area which is only about 30 miles from here. Not very much is known of it as yet, but reports are so far very favourable and the ground is being staked all round the first discoveries. This may mean another gold camp within a reasonable time."

The extension of the T. & N.O. Railway towards James Bay absorbed timber men, carpenters, riggers and labourers. The completion of this line in 1931 will provide a large volume of employment.

The Abitibi Power and Paper Company gave the Dominion Construction Company a contract for the building of a power plant and dam at Canyon Falls at a cost of $23,000,000. The location is approximately 70 miles north of Cochrane. On October 31st, 800 men were working on the job and this number will be increased as the work progresses. In addition to the carpenters, pipe fitters, timber men and labourers sent to the job, miners were also asked for by the construction company. The miners are being employed on the construction of a large tunnel which has to be cut in the rock in order to divert the course of the river while the dam is being built. A transmission line is also being cut from Timmins to Sudbury as a large part of the power that will be harnessed at the Canyon will be used by the mines in that district. This project is in itself a means of providing employment for several hundred men.

Concluding his report, the superintendent states that the depression throughout the Province has probably been felt less in Timmins than elsewhere.

Toronto—Men's Division

Typical extracts from the report of the Men's Division of the Toronto Office are given below:

> "The industrial depression recorded in the last report continued with increasing severity throughout the year. Over production, wild speculation in the stock market, the failure to sell the 1929 wheat crop with its attendant tying up of large sums of money which would otherwise have been available for investment in industrial enterprises, all played their part in producing and continuing a condition which is world wide and which has made for much misery, want and destitution among a great many workers throughout the Toronto zone. We had examples of men who have been in continuous employment for periods of from five to eleven years thrown out of employment, many of them men with first-class qualifications.
>
> "The unskilled and semi-skilled workers suffered by reason of their varying lack of efficiency for work which was in progress. There was at all times a tremendous surplus of unskilled and semi-skilled workers available for road construction work, hotel work of all sorts such as porters, dishwashers, etc., and in other unskilled and casual work. This year for the first time we had a surplus of accountants, engineers, machinists and other skilled workers. The slump in the building trades produced a surplus of carpenters, bricklayers and other construction workers who are not yet absorbed in industry. The stock market crash is responsible for a great many office workers and pseudo-office workers being thrown on the market and a large proportion of these are still idle.

"The policy of visiting a number of firms was continued with satisfactory results in the main, though nothing much could be done on account of the industrial depression. We have established a connection with the Toronto Industrial Commission, whereby all information regarding new firms locating in the city is sent to us and we get in touch with the firms immediately on their arrival in the city, and in some cases before they are ready to start business.

"During February the Farm Section was moved to a new location at 86 Church Street on the street level and this has been found much more satisfactory in enabling us to bring the farmer and his hired hand together in proper waiting rooms.

"About two months ago the Boys' Section was moved to 90 Church Street and the Professional and Business Section to 92 Church Street. This has resulted in better arrangements and, when conditions improve, should be more satisfactory to all concerned."

The situation in the Professional and Business Section of the office is described by the superintendent as below:

"The past year was marked by a steady decline in placements and a big increase in the number of new registrations, having now from 350 to 450 on the active files. The most notable feature was the exceptionally fine type of applicants registering, clerks, bookkeepers, accountants, salesmen and various types of mechanical and other tradesmen, even engineers, all of whom are unable to find employment on account of business conditions. There were many orders for salesmen on a commission basis only, canvassing from door to door, which are very unsatisfactory jobs. We also received orders for specially qualified men which were very difficult to fill and in most cases the firms asked for importation almost as soon as they gave us the order. At the present time we have enquiries for a photographic expert, silk screen workers, ladies' hairdressers, petroleum engineer and plant superintendent and the firms in question have asked for importation because we have no applicants suitable for the positions."

The Boys' Section was active throughout the year so far as registrations are concerned, but the placements showed the same relative decline as the placements of men in industry. Recommendations made by the superintendent in connection with the development of the Boys' Section are included in the following extracts from his report:

"The co-operation of the various boys clubs like the Big Brother Movement was an important factor in aiding this section in its placements and only for their co-operation the decrease in placements would have been greater. The proportion of failures in the Boys' Section is too large and I am convinced that if boys who are unusual, that is, who are not responding in the proper way to the ordinary academic training, could be given the advice and supervision of vocational advisors attached to the public schools, they could be pointed in the right direction and be made a success of when they start out in the world on their own. Among these unusual boys will be found some who are apparently manually minded and who could be made good citizens by being taught to use their hands in conjunction with a certain amount of academic work. For these boys

I would suggest an extension of the vocational class idea so as to develop the best that is in the boy and make him a good citizen.

"I am in touch with the Vocational Advisory Committee on these matters and that brings us to where the problem of the boy affects the Employment Service. We have a proportion of our applicants who, from various causes, cannot be successfully placed in employment. They are over the school age and cannot be referred to the Board of Education unless they wish to go to school, and what to advise them is the crux of the question. We are unable to do any vocational advisory work in connection with the Boys' Section, but a competent and thoroughly trained vocational advisor would be of great value giving his whole time to advising the boys who so far have been misfits and tend to become merely casual labourers if not worse.

"I believe that by co-ordination of our efforts with the various organizations looking after boys a great deal might be done to reduce the number of failures and to make good citizens for Canada. On the other hand, if these boys are allowed to drift they will become casual workers, dependent on the community for charity and relief most of the time, or drift into a vicious life where they will have to be maintained by the state in reformatories, jails or penitentiaries."

The situation in the Men's Industrial Section is similar to that reported in the other centres throughout the Province. A systematic canvass of employers was maintained throughout the year by personal visits, by circular letters and by telephone and each year sees an increase in the number of local employers who naturally turn to the Employment Service when in need of help. Occasional broadcasts provided an additional means of bringing the Service to the attention of employers and workers.

The situation in the Farm Section is described as below:

"The demand for general farm labour showed a considerable decrease during the year, with the resultant increase in the number of applicants looking for this sort of work. There is a large surplus of farm labour available for employment, but the farmers, generally speaking, are hard up and wherever possible they are either doing the work themselves or, when they do hire a man, they are offering very much reduced wages.

"The types of men applying for farm work are excellent and much above the average. Orders for peach and apple pickers were light this year due to the abundance of the crop and the low prices. The order for celery pickers received last year from a farmer near Bradford was not repeated, as he was able to secure plenty of local men and women for his purpose.

"The office is well located and is suitable for the farmer who can drop in any time during office hours and pick up his man, and being well known should be of value when business picks up."

Employers wishing to bring workers from outside the boundaries of Canada are required by the Department of Immigration to make every effort to secure the help in this country if at all possible. Importation request forms must be filled out by such employers and the orders are circulated throughout the length and breadth of Canada.

In the Toronto Office the clearance section deals with such requests and has the following comments to make upon this phase of the work for the year under review:

> "At the present time the Applications for Admission of Labour are taking up a large part of the time of this section. During the year some 40 or more applications were filed and of these about a dozen were handled since the first of September. Some of the companies requesting importation are just starting in business in Canada and it impresses upon them the importance of the Employment Service of Canada, and they are usually willing to take full advantage of our Service for their other needs. Some other companies that are requesting importation have never used our Service and through this contact they might be led to place their business with us. The fact of employers knowing they must place the order with us and have it advertised across the country for a given period of time to allow us to obtain Canadian help if possible will have a restraining tendency upon their decision to ask for any importation of labour."

Because of its importance, the report of the Handicap Section is given in some detail below:

> "During the fiscal year 1930, new registrations increased, while placements showed a considerable decrease compared with the last fiscal year. Regular placements showed a decrease of approximately 20 per cent. which is a direct result of the industrial depression evident during the greater part of the year and which affected partially disabled applicants to a greater extent than those possessed of their physical faculties.
>
> "Considerable increase in new applicants disabled by old age with its attendant infirmities was noted, the majority of whom were not old enough to be eligible for the provisions contained under the War Veterans' Allowance Act. Medical cases continued to constitute the greater number of new applicants, many of whom were suffering from chest, lung and heart disabilities. The progressive nature of these ailments is very marked, with the result that these applicants are less able each year to compete in the general labour market.
>
> "During the year a number of applicants suffering from epilepsy and other forms of nervous disorders added to the lists of unplaced and constituted a considerable problem as regards satisfactory placements. With respect to applicants suffering from epilepsy, it was conclusively ascertained that employers of labour are not prepared to provide employment for this class of applicants. Many of these men so afflicted are discriminated against despite the fact that the epileptic seizures may only occur at rare intervals, some of them on an average of once a month, when they are incapacitated for a period of less than one hour. When it is realized that the applicants mentioned are only incapacitated for a period of twelve hours per year and are more or less physically fit during the remainder of the time, I would respectfully suggest their absorption into some form of government work shops or other forms of sheltered employment, where they would be enabled to earn a livelihood and at the same time be protected against unequal competition with workmen not so afflicted. This form of employment would also provide for a number of medical cases referred to this office from the military and other hospitals

> for part-time employment, which is so difficult to obtain in the labour market owing to the competitive nature of present day industry.
>
> "The appreciation of this section is again expressed to the medical and neurological clincs of the Toronto General Hospital for their splendid co-operation in furnishing reports when requested concerning the employability of applicants considered ineligible for the service maintained by the Department of Pensions and National Health.
>
> "The continued success of this year's activities is due to the successful efforts of the staff connected with this section in maintaining the most cordial relationship between the various employers of labour and this office, also by the much appreciated co-operation of the applicants themselves, despite the fact that many are suffering considerable hardship through lack of employment and opportunity."

The extent to which the public employment office touches the lives of the workers of the city and district is shown by the fact that during the year members of the staff conducted 164,519 interviews with applicants, exclusive of telephone conservations. During the year employers asked for 27,708 men; 52,684, applicants, of whom 1,708 were immigrants, registered and 28,192 placements were made. Of the placements, 11,431 were casual in their nature while the remainder, 16,761, were in jobs lasting over two weeks.

Concluding his report the Superintendent of the Men's Division makes the following observations:

> "We received a certain amount of assistance from the newspaper but having no control over what is published, we suffered in some cases from the publicity given through lack of understanding on the part of the newspaper authorities.
>
> "The Poppy Fund, House of Industry, Neighbourhood Workers' Association, Y.M.C.A., Irish Protestant Benevolent Society, Catholic Welfare League, Sons of Scotland and Sons of England Benevolent Societies, and other organizations helped us in tiding over needy cases until we were able to find them employment. In this connection, the Imperial Chapter of the Daughters of the Empire assisted us in many ways in helping out ex-service men, both married and single, and the work carried out last winter at 41 Isabella Street by the Municipal Chapter was of inestimable value to the men concerned. Efforts are being continued to co-ordinate the work of all organizations dealing with boys and girls and help the coming citizens of the country to take their rightful place in the community and become assets instead of liabilities. In this connection, the suggestions made in the report of the Boys' Section are the result of consultations and conferences which, it is hoped, will result in the greatest good for the greatest number of those who will be citizens in the days to come.
>
> "The bulletins and circular letters whether general or on special cases produced varying success, but in the main were of considerable value to the Service.
>
> "The visits to the various plants continued and a personal contact with the head of the organization visited was thus established. In this way the employer became interested in our Service, we were able to study his staff and labour requirements and to send him the exact type of man or

> boy wanted. An effort is being made to induce employers to visit our offices to discuss their problems with us, but until business conditions improve we cannot do much in this line. A policy was inaugurated of visiting the towns in the Toronto zone, such as Georgetown, Brampton, Bradford, Newmarket, Aurora and Barrie and contacts with the township officials were established. It is hoped in this way to secure co-operation and better business for the Employment Service when conditions warrant it."

TORONTO—WOMEN'S DIVISION

When industrial conditions are below normal there is a noticeable decrease in the demand for unskilled or semi-skilled household workers and an equally, if not greater, decrease in the demand for girls and young women for clerical and industrial positions. Commenting upon the relationship between this situation and the question of immigration, Miss L. O. R. Kennedy, Superintendent of the Women's Employment Office in Toronto, reports as follows:

> "We might first mention the numbers who have come to Canada by the £10 rate in search of clerical and industrial occupation. Since no restriction was placed upon these workers to prevent them from making a change of vocation, many upon meeting with the severe unemployment situation in the industrial field, turned to domestic opportunities, thus creating an over-supply of inexperienced workers in this section. Whereas in previous years a great part of our placement work was supported by employers accepting untrained workers coming from the British Isles, under the £3:10 scheme we are now confronted with a growing resolution on the part of the employer that only thoroughly trained help will be acceptable. This change of attitude has been created by the prevalent financial depression which has displaced the middle class employers and given cause for a reduction in staff of those employing two or more maids, thus making greater the demand for the competent cooks-general. Therefore, with the overflow from the industrial section together with the large numbers of local inexperienced domestics it was necessary for us to acquaint the Department of Immigration and Colonization with this existing situation which took place in the beginning of the year."

In spite of the depression a large number of firms availed themselves of the services of the Clerical and Industrial Section for the first time during 1930. While much of the work obtained was of a temporary nature, it is confidently expected that the placements made during 1931 with the same concerns will be permanent.

As a result of the strict enforcements of the Canadian immigration laws, the office was able to supply foreign born workers to a canning factory in the Niagara District during the month of May and again in the month of September. For many years this factory, as well as others in the district, had obtained their seasonal help from Buffalo. The situation with regard to clerical workers is described in the following extract from the report:

> "Of course the dullness in industry was reflected in the scarcity of clerical orders. In addition, the closing of many financial offices and the strict curtailment of expenses on the part of others, not only decreased our orders but threw many first-class people out of employment. Women who had held splendid positions as bookkeepers or accountants were dis-

missed and their positions given to men. We registered many stenographers who had been making from $25 to $30 per week. Many of those who had reached forty years of age, or more, are still unemployed and present rather a problem.

"Naturally this condition was accompanied by a decrease in wages. The best stenographic orders we have handled this year have not offered a wage above $20 per week.

"This factor was not so evident in industrial work. Probably the Minimum Wage Laws have had a stabilizing effect, although we cannot tell how piece-work rates were affected."

Because of the great interest in the question of the placement of domestic workers the report of the Houseworkers' Section is given in full below:

Regular Figures:

Applicants	16,402	Increase over 1929	3,249
Vacancies	11,675	Decrease from 1929	3,224
Placements	6,517	Increase over 1929	81

Casual Figures:

Applicants	9,352	Decrease from 1929	2,411
Vacancies	7,301	Decrease from 1929	3,137
Placements	7,301	Decrease from 1929	3,137

Immigrants......... 1,884

This section as the year began presented a situation where inexperienced help prevailed in excess, while vacancies were forced to drop with the depression. At the same time a change was seen in the nature of orders for domestics. Employers who formerly engaged a staff of three, found it compulsory to revert to two maids, and employers formerly employing a cook-general and house-parlourmaid were forced to reduce the help to one, who would be a maid capable in all duties, namely, a cook-general. As a result the demand steadily increased only for this particular type, while the great numbers of inexperienced help found themselves suddenly out of demand. The middle-aged workers with years of experience to their credit found that employers insisted upon engaging only younger and stronger workers, who would be more adaptable to all kinds of household duties, such as answering the door and waiting on the table. This attitude affected domestics of various types. The fact that many Finnish girls found difficulty with the English language reduced their opportunities for employment at this time.

The foregoing figures indicate the outstanding decrease in the number of new arrivals who came to Canada seeking domestic work. As we have already pointed out, the local conditions warranted a reduction in the inexperienced class of worker and since the experienced help proved unavailable from overseas, we were obliged to consider a minor number of new arrivals. Married couples were not plentiful, but since the demands were few, all those of good type were readily placed.

Farm placements mark a slight increase this year but requests for such employment are still low, due to the small wages being offered. However, the willingness on the part of these employers to accept mothers with children, presented an opening for a type of applicant whom at this time we found difficult to place.

We were patronized by numerous out-of-town employers from outside zones, who, not desiring local help, sought assistance through our branch, believing that outside help would prove more desirable, having no family connections in the district. On the other hand, these vacancies proved difficult to fill, since applicants in our locality were reluctant to leave their families and friends.

Orders for help in summer resorts were listed as usual, but owing to the lull in that business, many of these were cancelled shortly after being placed, with the result that many prospective placements were lost.

Depression resulted in outstanding concern among casual workers. At no time was the demand equal to the supply. From individual interviews given to applicants in this section, we learned that workers formerly holding steady places where employers requested their services regularly each week one or two days, were faced with dismissal when these employers were forced to cut down on their staffs. This condition presented several cases who were in dire need. At such times we were relieved by the splendid support and co-operation of the social service organizations which immediately rendered all possible assistance to these homes.

Never before has it been more evident that the personnel of the Women's Division should be composed of sympathetic and intelligent clerks possessing above all a keen insight in adjusting certain types of applicants to the right vacancy. Without these qualities we should find it beyond our powers of attainment to be recognized by the Department of Social Science of the University of Toronto as a training centre for their students in field work. The number of these students this year was increased to four, which indicates the satisfactory training given these pupils. It was also our pleasure at a time when two of our reliable clerks resigned to enlist the services of two competent university girls, one a graduate and the other an undergraduate, whose duration of service, we regret to say, could only be temporary. These temporary assistants proved most valuable during the season, when we were requested to supply relief to four other offices for periods of from two to six weeks.

WINDSOR

Below will be found extracts from the report of the Windsor Office Superintendent:

> "At the beginning of the past fiscal year and during the early winter months, industrial conditions were very bad in this district. During that period quite a number of skilled mechanics, bushmen and labourers were transferred to various parts of the Province, as follows: 83 bushmen were transferred to the Timmins district; 32 bricklayers and 1 mechanical draughtsman to Sudbury; 18 toolmakers and 12 machinists to Sarnia; 5 machinists and 8 labourers to Chatham and 1 granite cutter to Montreal.
>
> "On account of the low prices received for the tobacco crop of 1929, less tobacco was planted this year, consequently the demand for farm hands was not so great as in previous years and wages were considerably lower.
>
> "Building and construction work both in Detroit and the Border Cities took a decided slump during the past year and many skilled mechanics,

many of whom were working in Detroit and residing in Windsor were unemployed many months with no prospects in sight for the immediate future. Building permits issued by the building inspector, Windsor, from January, 1930 until October 31st, 1930, were for the total value of $1,807,260. For the corresponding period of 1929, permits were issued to the total value of $5,353,469.

"Conditions in the automobile industries during the winter months were not very good and it was the middle of February before they began to improve. Production gradually increased until the end of May when there was a decided change and the automobile manufacturers began to reduce their staffs. These conditions gradually got worse during the summer and several of the plants were closed for temporary periods. During the past two weeks the General Motors improved considerably and a large number of their employees who were idle for some time have been reinstated.

"The Detroit-Windsor Tunnel was completed several months ahead of schedule time and was opened to the public November 1st, 1930, consequently a large number of men were thrown out of employment. To counteract this approximately 100 men were given permanent employment as customs examiners, immigration inspectors, policemen, firemen, auto mechanics and bus drivers.

"The demand for stevedores, marine firemen, deck hands, etc., was very limited during the past year. This was due to the curtailment of shipping on the Lakes and surplus of labour available at all docks.

"Late in August the municipal authorities of Windsor commenced operations on a number of sewers. This work was put on as a relief measure and approximately 50 men were given 3 days in about every 3 weeks. At the present time 450 men are working in 3-day shifts.

"In spite of the unusual industrial conditions of the past year, we believe that the record of the Women's Division compares quites favourably with that of last year and it is to the domestic section that the credit is due. Orders for this class of work increased greatly though wages dropped materially. During the past fiscal year it was very difficult to place women applicants in factory work in this district. We expected to place many factory workers during the canning time, as crops were very bountiful and there are several canning factories nearby, but at that time applicants flooded the towns in which these factories operate and were taken on when needed. However, we transferred approximately 175 to the Chatham district in the late summer. Hotel and restaurant work was very scarce the past summer and hotel and restaurant people report a slack summer. Day work was not plentiful even though wages dropped from $3.00 to $2.50 and $2.00 per day. Wages for full time help dropped to such an extent that employers find that they can get a full time maid for little more than the cost of a day worker."

The Employment Agencies Act

Below will be found a statement of the placements reported by the twelve licensed employment agencies in the Province of Ontario. These figures indicate the fact that the old established agencies have maintained the confidence of certain employers.

In the case of the agencies operated by Miss McMullen and Miss Perry, the placements are almost entirely in the nursing profession, a field not covered by the offices of the Public Employment Service. During the year the holder of the Metropolitan Agency license, Mr. H. A. Lay, died and his license was transferred temporarily to Mr. R. M. Ballantyne.

Two agencies which were licensed, those of J. Palangio of Cochrane and P. C. Cuillerier, of Kapuskasing, made no reports during the year.

INVESTIGATIONS OF EXPLOSIONS OF BOILERS AND PRESSURE VESSELS

February 27th	Copper jacketed kettle at Bowes Company, Toronto
April 1st	Boiler at the plant of Snedden and Needham, Pakenham, Ont.
October 14th	Two heating boilers at Catholic Church, Haileybury, Ont.
October 18th	Vulcanizing unit at Bloom Bros., Toronto

CERTIFICATES ISSUED

Class "A" certificates (new pressure vessels)	655
Class "B" certificates (used pressure vessels)	989
Class "C" certificates (heating boilers, low pressure, accepted by affidavit of shop foreman)	498
Class "D" certificates (new pressure vessels, accepted by affidavit)	1,148
Class "E" certificates (new boilers, accepted by affidavit)	178
Duplicate certificates	54

The total amount of moneys transmitted to the Treasurer of Ontario for the fiscal year ending 31st October, 1930, was $20,136.84.

Board of Examiners of Stationary and Hoisting Engineers

Chairman: J. M. Brown
Members: W. J. Scott, S. G. Rose
Inspectors: E. J. Everett, W. J. Jordan

In maintaining a high standard of examination for the stationary and hoisting engineers of Ontario, the Examining Board feels it is responding to the demands of modern industrial development. That the efficiency of the average present-day power plant is due not only to a better grade of equipment but also to a better class of engineer is now fully recognized by employers of labour. It is also appreciated by the engineer that the Government certificate supports him in his efforts for recognition and the grading of the certificate spurs him to greater endeavours. It leads him by sure and gradual steps to positions of increased responsibility and reminds him that what he is doing now is of vital importance since his present training is fitting him for a higher certificate with expectation of adequate reward.

The grade of permanent certificate held by an engineer represents the measure of his ambition. There is a high price and a steady market to-day for the capable stationary engineer of the advanced grades, and there is evidence that the engineers of Ontario are becoming alive to this fact.

The few violations of the Act which occurred during the year were mostly unintentional on the part of the plant owners and were confined mainly to the smaller stationary plants and construction jobs.

The following is an outline of the work of the Examining Board for the fiscal year 1930:—

REPORT RE CERTIFICATES FOR FISCAL YEAR 1930

Number of certificates issued	17,865

Factory Inspection Branch

Chief Inspector: James T. Burke

At the end of the last fiscal year it was hoped that a decided increase would take place in the volume of manufactures and the number of persons employed, but industrial and commercial conditions during the fiscal year just closed were not as bright as were anticipated.

In presenting the forty-fourth annual report of this Branch for inclusion in the Eleventh Annual Report of the Department of Labour it is somewhat regrettable to record that employment generally throughout the Province was not as great in volume as during preceding years and that the end of the fiscal year showed a decided shrinkage when compared with the beginning of the year. The index number of employment in Ontario at November 1st, 1929, was 126.5 and at the end of October, 1930, the index number stood at 111.6. This shows a contraction of 14.9 in the index number and indicates that approximately 56,000 fewer persons were on the pay roll at the end of the fiscal year. In addition to the general shrinkage in the volume of employment in the various industries in this Province the factory inspectors practically without exception report that most of the factories coming under their jurisdiction were working reduced payroll time and this condition further retards the improvement of industrial conditions generally.

Contraction in purchasing power due to a shrinkage of money wages based on the number of hours worked tends to keep industry moving at a slower rate than is beneficial to all concerned. There are a number of economic factors that have helped to create the present condition in industry, chief of which are the wheat situation in our western provinces, over-speculation in industrial and mining stocks, contraction of international trade and credits, and generally, a tendency on the part of the public at large to withhold their available purchasing power except for the absolute necessities.

Careful analysis shows that the industries that have been most busy are those connected with the manufacture of food, clothing and other household necessities. The greatest shrinkage took place in iron and steel, pulp and paper, building material, lumber and textiles.

Present conditions make it difficult to estimate what is likely to take place in the sphere of industry and commerce during the present year. It is recognized by employers in industry and economists that industry is now so well organized with up-to-date machine equipment and methods of scientific management that an increase in the productive power of each industry could take place without necessarily augmenting the numbers of persons now employed.

Whether a decided improvement will come through a reduced working week for all classes of employees in industry and commerce or whether an improvement in the wheat situation coupled with the opening up of new avenues of trade, new industries, and developments of industries now established has yet to be determined. It is along such lines that improvements in the present situation appear to be most hopeful. Whether industry and commerce are normally busy or a contraction has taken place in such activity, it has no decided influence on the work of this Branch. Oftentimes a depresed condition in industry makes the work of our Branch officials more onerous and important because of the necessity of knowing the changes taking place in the methods and processes in industry and the numbers employed. The truth of this statement is borne out by the fact that our staff of inspectors made approximately 20,000 inspections during the fiscal year as compared with 17,944 during the preceding one.

It is inevitable that during depressed periods less opportunity is available for the introduction of up-to-date mechanical equipment, newer processes of manufacture and improved methods of production. There is no decided change in any of these features to report during the present fiscal year. Great care, however, has been taken by the inspectors to ensure that all establishments visited conform to the various requirements of the Act. As a result the purity of the atmosphere where workers are employed is maintained at the highest possible level, either through artificial or mechanical means, fire hazards are controlled by careful inspection methods and suggestions, machinery and all devices of appliances in motion are carefully inspected with a view to proper safeguarding and, where necessary, sanitary conveniences, rest and lunch rooms are maintained to the satisfaction of the inspector.

Careful analysis of accidents is made from time to time to determine the industry or occupations in which most accidents occur and a study is made of the kind of accidents that are likely to happen. By this method the inspector endeavours to control and prevent as much as possible the recurrence of accidents and mishaps in those industries or occupations that may be deemed dangerous and at the same time constant attention is directed to the less hazardous industries and occupations. We are glad to report that our schedule of accidents during the present fiscal year shows that a decided improvement has taken place in the control of all hazards and accidents as reported.

Hours of labour for young persons and women employed in the industries governed by the Factory Act are well observed by employers concerned, and as a matter of fact the hours of labour for young persons and women in many of the occupations governed do not exceed 44 hours weekly, although 60 hours weekly may be wrought under the Act. It is found necessary in some instances where a firm manufactures a line of products for which there is a seasonal demand to issue overtime permits, but no overtime permit is authorized by the inspector until a complete investigation is made and the inspector is satisfied that issuing the permit is beneficial to both employer and employee. The Act limits overtime permits to thirty-six nights in any one calendar year, but usually when a permit is granted the time period is strictly limited by the inspector.

It is gratifying to record that the work of the Factory Inspection Branch is appreciated by employers and that in practically every instance where the inspector makes a recommendation it is carried out by the employer concerned. A high degree of co-operation is also forthcoming from employees and this attitude of mind on the part of the employee is especially welcomed by the inspector because it is realized that complete co-operation from employees is necessary in securing the best results from the work of factory inspection. It is through such understanding and co-operation that the best results are attained in productive and distributive business activities and it is one of the best guarantees for maintaining and promoting the stability of industry, the permanence of occupation, the constancy of wages earned and the ability and opportunity to enjoy the benefits and earnings and the advantages of education, recreation and entertainment. In all of these matters this Province is to the forefront.

It is with regret we refer to the demise of two members of our inspection staff, the late Messrs. A. J. Wright and Thos. Angrove. Both men were held in the highest esteem and their loss was keenly felt among members of the Branch. During the year two new members were added to the inspection staff, Miss Nina Garden of Hamilton, and Mr. W. C. Crozier of Kingston.

The following tables show the work of the Branch as carried out by the inspectors:—

	Year 1929	Year 1930
Total inspections and revisits..........	17,944	20,227
1st inspections........................	11,905	13,284
2nd inspections or revisits.............	6,039	6,943

In addition to these are investigations of accidents and complaints, inspection of buildings on grounds during the Canadian National Exhibition and the Ottawa Exhibition and at the homes of applicants on the delivery of 759 contract clothing permits issued under Section 52.

There were also the usual special visits, office calls and conferences incidental to inspection.

Employees in above industries, mercantile establishments and office buildings numbered 319,556.

Year	Males over 16	Males 14-16	Females over 18	Females 14-18	Total	Children under 14 dismissed
1929	240,175	653	75,557	3,263	319,646	50
1930	226,957	317	88,401	3,881	319,556	8

HOURS OF LABOUR

	Males					Femals				
Year	45	50	54	58	60	45	50	54	58	60
1930	78,356	71,568	25,815	9,500	21,671	47,356	25,386	5,058	2,904	4,498

Also 27,444 employees, male and female, working approximately fifty hours per week.

Orders issued relating to the various requirements of the Act totalled 6,996 as compared with 6,839 in the year 1929.

PERMITS

Applications for permits, overtime and others, numbered 1,618 and were issued as follows:—

Year	Overtime Section 33	Bakeshop Section 71	Fruit Camps Section 38	Sale of Bread manufactured out of Province, Section 70	Contract workers Section 52	Total
1929	773	117	23	50	533	1,496
1930	698	141	17	3	759	1,618

COMPLAINTS

One hundred and thirty-nine complaints were received during the year. Upon investigation eighty-two were upheld, thirty-six not upheld, fourteen are pending investigation and seven do not come within the jurisdiction of this Branch. Subjects of complaints are:—

Year	Heat	Elevators	Fire protection	Child labour	Lavatories	Sanitation	Boilers	Guards	Ventilation, dust, fumes, etc.	Overtime	Hours of labour	Mechanical exhaust	Miscellaneous.	Violation of Stationary Engineers Act	Violation of Minimum Wage Act	Violation of Adolescent School Attendance Act	Not under our jurisdiction	Total
1929	8	5	3	4	10	6	5	..	11	15	36	2	5	5	1	2	2	120
1930	11	1	3	2	14	3	9	2	9	3	46	3	14	4	5	4	6	139

VIOLATIONS

Violation of Acts in the enforcement of which the inspectors have a responsibility were submitted as follows:—

Of the Stationary and Hoisting Engineers Act	19
Of the Steam Boiler Act	3
Of the Adolescent School Attendance Act	24
Of the Minimum Wage Act	1,580

PROSECUTIONS

Proceedings were taken against one firm under Section 33 of The Factory, Shop and Office Building Act for working female employees overtime without a permit.

EXPLOSIONS

Explosions reported during the past year, causing the death of 6 employees and injuries to 11 others, are as follows:—

November 15, 1929—A tank, which had contained gasoline and which was being repaired, exploded when the workmen applied an acetylene torch.

November 22, 1929—A tank exploded when two men were engaged in repairing an adjacent tank with an open torch.

December 22, 1929—An oil burning furnace figured in an accident, when the electric spark ignited an accumulation of gases from the oil.

January 1, 1930—In a packing plant the bottom of the high pressure stop valve in the line at the compressor blew out.

February 10—There was an explosion from oil in a furnace.

February 26—A steam kettle in a jam factory disclosed infirmities under pressure.

March 10—The steam boiler in a small saw mill exploded. Upon investigation it was decided that the accident was due to an impairment of a recent weld, the boiler having had repairs.

March 15—In a cleaning plant, a quantity of gasoline in a washing machine exploded resulting in a small fire on the premises.

June 23—A thousand-gallon steel pressure tank exploded when undergoing a pressure test. The end of the tank blew out.

August 4—An accident resulted when a spark supposed to be from the switch or brushes of a motor ignited gasoline vapours, resulting in a fire and explosion.

August 20—In a garage and service station, there was another such explosion, when gasoline vapours became ignited.

October 7—An accident occurred in a catsup factory when a steam jacketed copper kettle under pressure disrupted.

Accidents

Four thousand eight hundred and seventeen accidents were reported during the year 1930, fifty of which were fatal, as compared with 7,083 reported in 1929, with sixty-three fatal.

Fatalities were due to:—

Burns and scalds	4	Cranes and derricks	2
Elevators	2	Electricity	2
Engines and cars	3	Explosions	6
Falling substances	10	Falls	6
Infected wounds	3	Jammed between articles	1
Rolls	1	Belts, pulleys, shafting	4
Conveyors	1	Trucking	1
Other machinery	3	Suffocation	1

The reports of the factory inspectors which follow, although not reproduced here in full, give a fairly complete picture of this work in the Province. In practically all reports reference is made to industrial conditions prevailing in Ontario and to their effects on the work of the factory inspectorate. In times of depression manufacturers are usually less ready to make improvements and changes which involve expense. The reports indicate little difficulty in connection with the inspectors' duty in the enforcement of other Acts and a decrease was recorded in the number of violations of the Stationary and Hoisting Engineers Act, Steam Boiler Act and the Adolescent School Attendance Act, as well as in the number of cases of child labour in factories. A considerable number of firms were reported for not having posted as required the orders of the Minimum Wage Board.

Other phases of the work of the factory inspectorate are dealt with at greater length in the following pages.

J. H. Ainsborough

During the fiscal year just ended the economic depression which appears to be world wide hit this district very hard. Many workers in factories were working only three or four days per week and a great many were out of work. This makes it more difficult for the inspector to have recommendations carried out. There is an optimistic feeling among the large majority of manufacturers that the year 1931 will see a return of prosperity although they predict the return will be slow during the first six months. This means a steady improvement in industrial plants which will benefit both employers and employees alike.

Great improvements were made in the guarding of steam laundry machinery by the manufacturers.

Spray painting has taken the place of brush hands in practically all plants, duco and other lacquers being the principal ingredients used. A great deal could be written on this subject and the attending hazards. In this district exhaust fans and booths with turntables were installed so that the operator will have the work between himself and the exhaust fan.

Forty-seven canning factories were visited twice during the canning season and factory conditions showed a very marked improvement over preceding years.

In this district there are a great many punch presses. In one plant there are 600 and in another 325 presses and careful attention was given to the guarding of this very hazardous machinery. The dangers attached to the operation of power presses are clearly shown when it is stated that the subject provides food for discussion at every safety convention held. The "repeat" hazard is the most serious one and is the cause of a large percentage of the punch press accidents. Punch press manufacturers are endeavouring as far as possible to eliminate the possibility of this danger so far as new machines of this kind are concerned. Many ingenious devices are in use to protect the operator but none are what might be termed "fool-proof" and consequently they require frequent adjustment by some plant engineer in order that so far as is humanly possible the dangers of accident may be eliminated. It is claimed by some that the "swing guard" which is in more or less general use has a certain bad psychological effect on the worker occasioned by the continued monotonous action of the guard passing back and forth before the eyes, but at the same time the value of this type of punch press guard is undoubted. The die itself is in many instances a source of accident and the construction and material used must be of the best. Press accidents frequently occur through defects in the steel used for punch and dies. It may be that the finished product is improperly hardened, as a result of which a piece of the material is projected in the direction of the operator and sometimes means the loss of an eye. It is truly said that many can design a die, but it requires an expert to construct plans for a "safe" die.

R. ALBROUGH

The closing of our fiscal year finds business in anything but a satisfactory condition. The paper and lumber industries can be classed as the major industries in the northern part of the Province. These industries have been operating under reduced capacity during the past three years due to over production. During the boom and construction days special efforts were made to improve working conditions in these plants which are now good and should give satisfactory results when business gets back to normal, which it is hoped will be in the not far distant future.

The question of inspection of uninsured pressure vessels is much the same as reported last year. Nevertheless this matter always requires the most careful supervision as there are still many owners who do not see the necessity of an annual inspection as required by law, and if not visited by the factory inspector will neglect having inspection made. There has been a great increase in the number of garages and service stations in the last few years and most of these premises have one or two air receivers or vulcanizing machines with the pressure varying from one to two hundred pounds per square inch. In most cases these pressure vessels have been approved by the Boiler Inspection Branch, but there were also some which were found to be entirely unsuitable for the purpose for which they were being used. In two cases the ordinary oil drums were being used for air storage at a pressure of one hundred pounds per square inch. Needless to say I had their use discontinued for this purpose before leaving the premises. The causes of boiler explosions are numerous, some of them being excess pressure, low water, water hammer, electrolysis, unknown gases, scale, different forms of corrosion, structural weaknesses and the human factor. Many engineers state that it is pressure alone that causes great damage. Were such the case, we would not be permitted to test steam boilers by hydrostatic pressure equal to one and one-half times the approved steam pressure.

H. BOURNE

It is difficult to present a report without referring to the depression which has affected the foundries throughout the Province along with many other industries and at the close of the year a large number were working a short week with a considerable reduction in the number of employees. It is to be hoped, however, that after the holiday season trade in general will enjoy a much improved condition. During the year there were many advances made for the safety and health of employees in the way of improved sanitary conditions, ventilation and heating. The use of suitable goggles was more in evidence than in the past and eye injuries were cut to a very low percentage.

When the condition is favourable it has become the general custom to wear goggles during the cast. The writer also observed that when a proper foundry boot is stocked by the firm and sold to the employees at a nominal figure a reduction in foot burns has been quite apparent. Along with this feature the leggings are an added protection that is much appreciated by both employer and employee. As a result, in one foundry alone where some 400 men are employed, under normal conditions they have not had a lost time accident due to burns for a period of four years which is a wonderful record and a great saving in suffering and also economically. It is regrettable to state that a fatality took place in one plant under my jurisdiction due to the fact that an employee failed to place the chain hook of a travelling crane in a safe position, holding the hook in his hand till it became out of reach and swung under the flange of a heavy casting tipping over onto another employee before he could get clear. It is always well for those in charge to do everything possible to educate the men in the proper handling of equipment as there are too many chances taken by inexperienced employees. Too much care can not be taken in loading buckets that travel over the heads of the workmen. These buckets should not be loaded above the top as the swing and vibration of the crane while in operation may cause pieces of the material to fall. On all cranes limit stop switches and lifting tackle should be inspected regularly and men instructed in the safe way of hooking up and handling this equipment which is most hazardous if not carefully handled. The foundrymen have co-operated with the inspector in improving conditions for those employed in the foundries of the Province.

W. T. E. Brennagh

In submitting a summary of factory inspection covering the past year, it may be stated that the work of the inspector involved more time, coupled with exercising of an unusual amount of diplomacy, than in former years. This may be accounted for by the fact that industries in the district during the first half of the year were all in operation and fairly busy, but during the last half year business was dull and in some lines of manufacture it was a struggle to continue operations. Depression is the issue encountered when protection and improved working conditions which generally involve expenditure are recommended. It is the constant duty of the inspector to impress upon the employer the necessity and the advantages of his factory maintaining up-to-date equipment, and of operating under modern working conditions as far as possible. However, the prospects for a busy year ahead are encouraging, as already the larger plants in the metal trades and in the textile industry especially are taking back their help and making preparation for a season of activity. At present writing, cotton mills in the district are increasing their output, one large mill in particular having within recent weeks re-engaged over 50 per cent. of the employees, who had been forced into idleness owing to depressed business conditions, while another mill increased their capacity over 33 per cent.

Good factory working conditions involve heating and lighting, ventilation, sanitation and the safeguarding and protection of machinery. This phase of the inspector's work was conscientiously carried out and when the employer was shown that accidents which occasion loss of time mean dollars and cents, he does not as a rule file objection to recommendations offered for the betterment of working conditions. Because of education along the lines of "safety," the employer welcomes the inspector and renders all assistance necessary for an adequate inspection of his industry. This working in unison is the foundation on which is built the success of factory inspection and all it implies. During the past year the work of inspection covered the same ground as in the previous year. Working conditions were improved in factories and workshops which have operated for years and in which there are always repairs to be made, but in the case of plants that are contemplated or in the course of erection, care is taken to have plans of construction approved and supervision of equipment installed to meet the requirements of the Act. In this regard a large number of plans were examined during the year to conform with this regulation.

Contrary to early season expectations the canning and jam factories, some 40 in the district, enjoyed a busy season which necessitated overtime work in some localities, the pea crop this year being the largest pack for many years.

Creameries, dairies and cheese factories all were visited during the year and good sanitary conditions found to exist. The customary order relative to boiler inspection seemed to be the main topic of conversation, as, obviously, the owner relies on the annual visit of the inspector to remind him of the necessity for his boiler inspection report. All uninsured boilers and vessels under pressure must receive inspection each year and this matter was carefully attended to. One explosion occurred during the year, and that was caused by over-pressure on a copper kettle used for boiling catsup. The reducing valve on the steam line failed to function and in the absence of a safety valve the main boiler pressure caused a rupture. Three men were scalded, one seriously.

Many mercantile establishments and office buildings were renovated in the past year, which work occasioned close supervision with regard to plans submitted for approval. Inspection of stores and restaurants, principally in relation to hours of labour for female employees, is a constant routine and difficult to regulate, owing to the busy seasons when the employer feels he must work females longer hours in order to meet competition.

Several permits were issued to camps for women workers for the purpose of fruit picking and these camps were inspected during the fruit season. Some 109 overtime permits were issued to cope with the increased business found to exist in certain factories, 27 of these permits being issued to canning factories, which are engaged in seasonal operations only.

Ten fire-escapes were erected on factories and office buildings, principally in the larger centres. Industrial accidents have decreased materially since the last annual report but still there remains opportunity for the safe-guarding of the employee and his education along lines of self-preservation. It is regrettable to report that 15 fatalities occurred during the year, two from electrocution, and two from burns caused by explosions of coal-oil and gasoline. This is an increase of two over the previous year. These accidents were closely investigated, as soon as reports were received.

In paint and varnish shops, there exists the important matter of adequate ventilation, especially where the work is performed by the spray method. A few complaints were received from this source but changes in exhaust systems and experiments in ventilation were made to the satisfaction of all concerned.

H. A. Clark

In the case of wood-working machinery, such as jointers, shapers, saws, etc., guards should form part of the machinery as it is not complete without them. A very dangerous custom that prevails in many wood-working factories is that the large belts have no shifters provided for shifting the belt from loose to tight pulley, and vice-versa, the operator being obliged to take a stick and pry over the belt every time the machine starts or stops. Many accidents occur through the operating of drop presses, as the working of these is largely at the will of the operator. In engine rooms driving belts, fly wheels and piston rods without guard rails are dangerous as are gib-headed keys and projecting setscrews, especially when they are on the outer length of shafting or in places where people are continually passing. Wherever these dangers existed notice was given requiring that proper guards and safety devices be installed.

Factory inspection has for its primary object the fullest possible protection of the lives and the health of working people. The more complete and thorough the system of safe-guards against every possible form of accident, the more conscientious and unremitting the effort to secure safe, sanitary and healthful conditions in our factories, workshops and other places of employment, the more nearly does the inspector measure up to the true standard of his calling.

Perhaps in no single feature of the inspection system has there been greater progress made or more real good accomplished than in the providing of adequate and dependable means of escape in case of fire. The growing tendency towards great combinations of capital in the various forms of financial and industrial activity has resulted in the erection of larger manufacturing plants and the employment of larger bodies of working people therein, accompanied by the greatly enhanced danger of panic and congestion of exits in case of fire. For this reason, and because of the increased height of the average buildings of the present, the necessity of fire-escapes is no longer a matter of conjecture, but is an universally accepted fact. So true is this, that the architect of to-day considers, not only the number, but also the location and kind of exits required to afford adequate protection. In fact, the incidental expense is no longer regarded as of first consideration, this item alone amounting, in some cases, to thousands of dollars.

In the rubber industry, possibly the greatest hazard in connection with unfired pressure vessels lies in the operation of vulcanizers, due to the fact that there are more vulcanizers used than any other class of unfired pressure vessel in this industry. There are more numerous methods of vulcanizing and hence they present more chances for hazards. Various attachments such as temperature controls, recording thermometers, instruments for eliminating air, and for proper circulation of steam, are employed to secure better cures and special instructions are given for the proper manipulation of these attachments. These attachments are automatic but are subject to failure in some instances. It is therefore necessary to see that the safety valve and pressure gauge are in good condition and operative all the time. The operator should test the safety valve at least once a day. Extreme care should be taken to see that the door or lid is closed and locked properly. Failure to do this has resulted in bad accidents. At the end of the cure it should be imperative that the telltale valve before mentioned be opened and the pressure exhausted before attempting to unlock the door or lid. These precautions apply to autoclaves as well as vulcanizers.

Air tanks, hot water heaters and storage tanks are under a constant pressure for a longer period of time, consequently do not present the problems that vulcanizers do. However, these vessels demand attention and care in their operation, and must be inspected regularly in accordance with the provisions of the Factory, Shop and Office Building Act.

Numerous other things must be observed according to the type of vessel. For example, air receivers may collect some oil, and the tank run hot enough to ignite the oil and cause an exposion. A trace of oil can be found by opening the drain on the bottom with which all air tanks should be provided. The tank also might collect an undue amount of moisture, which if carried into the lines is detrimental to the equipment. Therefore, it is necessary to blow down the tank through the drain line as often as the condition warrants.

Another condition that should not go unheeded in vessels containing hot water or steam is moisture on the outside of the shell. This moisture might come from leaky overhead piping or steam blowing against the vessel, which penetrates the covering around the shell, and causes rapid erosion. It is necessary, therefore, at times to remove as much of the covering as is necessary to expose the affected areas to ascertain this condition. All vessels, whenever possible, should be given a periodic cleaning and painting, which retards corrosion and adds to the life of the vessel. Any repairs to vessel, piping and attachments that are necessary should be given prompt attention and any laxity in this respect might create a serious hazard. The operator in a measure should note any irregularity about his equipment and report same immediately for correction.

W. C. Crozier

There are few branches of engineering or industrial work in which experience is of a greater value than in equipping the machinery in a factory with safeguards. The variety of sources of factory accidents makes it a very hard matter to tell where trouble is likely to occur, and many dangerous conditions in well organized plants are only brought to light and guarded after an unexpected accident. A policy of providing an adequate guard to prevent the repetition of any accident which occurs in the factory, no matter how unusual, is being followed by many of the progressive manufacturing companies and it is a plan which all managers may well adopt. In providing safe-guards for machinery there are two points of primary importance: first, the guard must be positive in its action, and as nearly fool-proof as it can be made, so that it will be impossible for the operator of the machine or those who come in its vicinity to be injured; secondly, it must be designed in such a way as to interfere as little as possible with the operation and output of the machine. It has been found that the employees of many factories are averse to the installation of guards on the machines which they use, owing to their belief that such a step makes their work more difficult. In such cases it is necessary for the management to educate the employees up to the point where they appreciate the fact that the guards are put on for their benefit, at the same time using strict discipline to maintain the maximum efficiency of all safety measures. Intelligent men are not slow to appreciate the value of safeguards and it is usually an easy matter to secure their co-operation in work of this kind after the first prejudice against a new system has been cleared away.

Laundries, dye-houses, and elevators with few exceptions were found in good condition and in no case have I had trouble in getting manufacturers to comply with the Factory Act. It is regretted that two fatal accidents occurred in this district during the past three months, each accident being investigated and reported upon to the Chief Inspector.

J. P. Ferguson

In the woodworking plants it is most noticeable that only on rare occasions at the time of inspection would all the machines be found properly guarded. Sometimes the guards were left off the jointer and circular saws when they had to be moved for a certain type of work and the neglect to replace them might lead to a serious accident. It is pleasing to note that fewer accidents were reported than in the previous year and none were fatal. The character or type of power saws is very generally known as they are operated in numerous establishments, both woodworking and other industries. There is, however, considerable variance in their equipment, maintenance and operation. Circular and bank saws are the types of power saws most commonly used, and while they were originally designated as woodworking tools, it should not be forgotten that to-day they are generally used in industry not alone for processing wood but many other materials. In the use of these tools in working wood and various other materials there is necessity for special equipment, maintenance and methods of operation.

With this rather general use of power saws in the numerous industries there has grown a belief among employers and employees which is far too general that any one can operate a power saw. The belief is almost as general that any one can sharpen, set and condition a saw. These saws of necessity operate at high speed and with considerable power in order to perform their work efficiently and economically. Consequently from the very nature of the work they do and the many uses to which they are applied, they are very hazardous machines. It is surprising how generally they are used in the various industries and how often they are operated by employees lacking in technique, training and ability to handle hazardous power tools of this character. It is conceded that these saws are hazardous, because the records of injuries, both serious and minor, caused by them are convincing enough. Owing to this fact it is realized that industrial injuries sustained in operation of saws should be reduced and that they should be properly guarded where it is practicable to do so.

There are numerous guards manufactured and sold that are effective for one or several operations on a saw, but there are none that can be considered effective for all operations performed on power saws. Even the best of guards have in most instances to be adjusted to the material processed, and whenever material or the operation varies, experience proves that often the guard is not properly adjusted to the work or is not used at all.

One of the leading saw manufacturing companies with many years of experience, states in a handbook they publish for the information of those owning and using saws, that "half the saws sent back to the factory for repairs have been injured or ruined through neglect on the part of the owners or operators who really know how to fit saws properly, but who put off the resetting and sharpening of their saws as long as they can force it through a cut of any kind. Other men through lack of experience do not know how to fit saws. The result is the same in either case."

The following are some of the causes which make power saws hazardous: excessive vibration; lost motion in carriage trucks; carriage not properly aligned with saw; carriage track neither level nor straight; guide pins too tight or not properly adjusted; saw table not in perfect condition; gauge not in alignment with saw, not properly fastened to table; saw opening in table excessively wide;

lost motion in mandrel bearings; mandrel sprung; heating of journal next to saw; ill-fitting mandrel and pin holes; collars not large enough in diameter; weak or imperfect collars; insufficient power to maintain regular speed; saw operated at speed in excess of that indicated by manufacturers; saw too thin for class of work required; saw out of round and consequently out of balance; not enough or too many teeth for the amount of feed carried; uneven setting and filing; points of teeth filed with a "lead," not square across; not enough set for proper clearance; too much pitch on hook of teeth; irregular and shallow gullets; backs of teeth too high for clearance; running the saw too long without sharpening.

In considering the problem of properly guarding wood working machinery, one is confronted with the fact that there are different types of plants. There are those which are solely woodworking establishments of a fair size, with experienced mechanics skilled in installing, maintaining and conditioning the machinery, saws, tools, etc., but these are few in comparison with the hundreds of small woodworking plants or the various other industrial establishments which have woodworking machinery and tools that are used incidently in their manufacturing process. In these plants they may not have any one skilled in maintaining or conditioning such machines or tools. Consequently, in many such plants employees are required to use machinery or tools which because of this improper maintenance are causing numerous accidents. When a power saw is dull the operator must of necessity apply excessive pressure in order to force it to cut. This increases the danger of the hands of the operator slipping on the saw and increases the possibility of kickback. Working with dull saws causes injury to the saw and the operator is lucky if he escapes injury.

W. S. Forster

During the course of the past year's work in this district approximately 1,400 establishments were reported upon; this included in the neighbourhood of 400 cheese factories, wherein general conditions were found fairly satisfactory.

In most cases it would appear that manufacturers are keenly interested in bettering the conditions under which their employees work. However, this year, due to the downward trend of business on the whole, a goodly number of industries in this district were operating below par, and as a result, there was some reluctance in complying with recommendations which incur monetary obligations. This depression is most noticeable in the lumber industry, although on the other hand, in the textile trade some new plants have sprung up and some old ones have reopened.

The application of paints, enamels and lacquers by means of the air gun has increased rapidly in the last few years until to-day very little paint applied in manufacturing processes is applied by brush. Not only is the lead content in paints a hazard to the workmen but also the new solvents and diluents which have their part in modern lacquers. While the lead content is now practically eliminated from the body of paint, in fact in some countries the use of lead in paint is prohibited, the diluents and solvents are more widely used and are changing repeatedly. As the lacquers in drying depend on the evaporation of their liquids rather than on oxidation for drying, the liquids entering into them must be highly volatile in order to give the quick evaporation and quick drying required for these finishes of our modern manufacturing process. It is in these solvents and diluents then that the new danger lies, although the lead content must be kept down, and present knowledge would indicate that lead should not exceed in concentration one per cent. of the material used for spraying. Furthermore, the other toxic ingredients in the spray should be reduced to a concentration below that which constitutes a health hazard. All paints containing lead, benzol, turpentine or free silica for use in spray painting, should be labelled in such manner as clearly to indicate the percentage of each substance in the container.

In its application the spray booth and its equipment should be such as to provide the maximum safety possible for the operator. The exhaust fan should provide a sufficient current of air, varying according to the size of the booth, but adequate to exhaust the fumes. The inlet of air into the booth should not exceed the supply of air removed by the exhaust. Where spray painting is done within buildings it should be carried on only in a part of the building set aside exclusively for that work. Objects freshly sprayed should be immediately removed for drying to special compartment also equipped to exhaust the fumes. The air pressure used in the spray machine should be as low as will provide a satisfactory painted surface. The nozzle of the spray gun should be held at least a foot away from the object being sprayed in order to avoid unnecessary "beat back." The operator should wear a mask into which pure air is supplied under pressure, should not be under twenty years of age, should be medically examined prior to such employment and examined periodically to determine if there are any ill effects due to his employment at this work. If he is found to be affected he should continue at this work only after medical advice.

In order to properly control this hazard provision should be made requiring spray operators personally to observe the regulations intended to minimize the health hazard. The fullest co-operation between management and operators is essential to successful safeguarding of the health of workmen.

The annual visitation to cheese factories is an important item in this district, requiring a goodly amount of time and perseverance. These yearly visits are in a large percentage of cases a necessity to insure the annual inspection of steam boilers and the forwarding of the certificate to the Department. However, many of these industries are located in the vicinity of other larger and more important industries, and it is merely a matter of arrangement to group these calls to the best advantage. Although, with these cheese factories scattered at irregular intervals throughout the territory, they do require time and perseverance, it is proved by experience that these annual visitations at present are the only dependable means by which the submission of an annual boiler inspection report may be assured.

Miss Nina Garden

Since my appointment as factory inspectress in May last I have been occupied in gaining a working knowledge of my district and have visited most of the industries in that area. On account of general business conditions throughout the country, while no factories were entirely closed, the majority were operating on short time. The general attitude of employers with very few exceptions is one of willing co-operation with the Government in making the conditions surrounding their employees as comfortable and as favourable as possible.

During inspections of shops in many centres, numerous cases of long hours came to my attention. Most of these cases were adjusted without difficulty between the manager or owners and the inspector. The general and ready compliance of the majority of employers on being informed of the requirements of the Act shows a desire on their part to co-operate in its enforcement. On two occasions when complaints were made that girls were working too many hours a day, the reply was made to the effect that substitutes easily could be found who would be willing to accept the longer hours. The employers, however, promised to remedy the conditions when they became convinced that with their present experienced helpers working legitimate hours they would, in the end, be farther ahead than they would be with the inexperienced ones working longer hours and they realized that, in any case, the law fixing the maximum at ten hours a day must be observed.

Mrs. E. Gurnett

Several minor and a few major scalp accidents occurred, some due to carelessness on the part of the injured, while others were due to long hair flying about the head. The "shoulder bob" leaves the hair at a dangerous length and was the cause of some of the accidents. Strict orders were given to superintendents and foremen that no female worker be allowed to wear her hair loose or flying; it must be closely confined to her head. The girls resent this sometimes; it takes the curl out. One office girl fell against an adding machine in operation and had quite a patch of hair torn out. In December, 1929, a power machine operator disobeyed the rule of trying to adjust a belt on a pulley; her foot slipped on the floor, thus throwing her against the swiftly revolving wheel. She suffered a severe scalp wound and was in hospital some months, only returning to work at the end of April. Even then her head was bandaged. Another girl was painfully hurt when stooping over a folding machine in a printing and binding shop. Not only is there the acute suffering to the injured but factory managers say the screams and the sight of the victim demoralize the nerves of those in the factory. Their work has to be abandoned or is only half done, which is a serious loss.

There were many home permits delivered, for again a vagary of fashion demanded the smart crocheted wool berets and so fashionable were these little head coverings that thousands were made in homes. Several firms contracted with one skilled woman to supply the berets, she in turn advertised for home workers and it kept one on the jump to be ahead of the work with a permit to the worker. There was an unusual amount of scarlet fever in Toronto during the spring and summer, so it was essential that all homes where work for factories was being done should be carefully inspected.

Quite a number of firms were found to be working the female employees at night without an overtime permit both in Toronto and in outside places. When this was discovered, a careful inspection of time cards was made right back to the beginning of the year. This was an arduous task, as one of the office staff had to assist and all were so busy. Managers were greatly surprised to find that they had exceeded the thirty-six nights allowed by the Act. One firm was in this dilemma at the height of their busiest season. Another firm had been found working at night during the Easter rush and in October were doing the same thing despite the warning. Their excuse was that they were busy in another department. In an isolated case, where an outside firm was found working their girls four consecutive nights a week without a permit a slight unpleasantness resulted, but this attitude is exceptional. Practically all concerns are desirous of complying with the Factory, Shop and Office Building Act. The general business depression and the spasmodic condition of business orders often led to speeding up to get an order out promptly and permits were overlooked.

MISS N. HAMILTON

No fatal accidents occurred to females employed in this district and only one accident of a really serious nature. The prevention of accidents has been due largely to the ready co-operation of managements in carrying out our regulations for the safeguarding of machinery and equipment in factories. Damage to property by fire in factories, shops and offices was very light in this district. Regular inspection of fire equipment was given on all inspections and fire escapes were constantly looked after to see that they were kept clear and in good repair.

Much time was devoted to the matter of sanitary conveniences this year. Most manufacturers have liberal views on the subject of satisfactory conditions of factory life. In new factories and workshops generally the sanitary arrangements are excellent and in the old marked improvement has been made. In the matter of toilets, privacy for female employees is often the most difficult to obtain. The fact that the workers do not complain of lack of privacy, a reason sometimes given by employers who are indifferent or who are inclined to rebel at the expense entailed in providing extra toilets or even separate approaches, is not a sign that they are satisfied with this condition, nor is it a good reason why any employers should neglect the demands of propriety and decency. In small towns one great drawback is the lack of sewerage, and it is only by constant attention to cleanliness and repairs that sanitary conditions can be maintained. Another question associated with sanitary conveniences is the need of washing facilities, and I have also recommended that such be provided wherever the circumstances would warrant it.

Although the volume of business was not so large as in the peak of the year 1929, nearly all factories employing female help in this district were running full time and there were indications that several factories would be opening up again. There was little unemployment of females in this district, especially among factory workers.

MRS. G. E. HORNELL

Machinery was found to be fairly well guarded and any suggestions for improvement along these lines were carried out by the employers who are usually willing to co-operate with the inspector to improve conditions for the safety and welfare of their employees. It would be difficult for them to compel girls to wear low heeled shoes and yet several accidents have occurred through high ones, usually on the way to or from work, in the rush to get their time recorded on the clock provided for that purpose.

Considerable time has been spent instructing superintendents and foremen to take the precaution of having Section 53 of the Act brought to the notice of female employees who are again wearing their hair too long to be unprotected against the danger of coming in contact with machinery, shafting or belting.

A light net can now be obtained at a very low cost which is satisfactory for this purpose.

Section 29 requires that in any shop in which girls and women are employed the employer shall at all times provide and keep therein a sufficient number of suitable chairs or seats for their use when not necessarily engaged in the work or duty for which employed. Many seats have been installed of various types. The general use of them is more noticeable in factories and offices than in retail stores. Often the space behind counters is limited and a stool becomes an obstruction, resulting in a torn dress or sore knee. A seat which folds back is largely used but is not adjustable to all fixtures. Having seats may not always produce the desired effect for though a sufficient number of seats may be provided it is difficult to ascertain whether the girls are prevented or not from using them.

Applications for overtime permits have been more numerous this year. It is always pointed out where less hours are the rule that a 60-hour week can be worked without a permit providing the 10-hour daily maximum prescribed by law is not exceeded during any one day. The inspectors do not encourage this practice knowing the health of the worker is impaired when she is not able to obtain a hot meal during the day and is often too tired to eat after reaching home. Some of the factories are in outlying districts where bus service is not available after seven p.m. and there is a long walk to get the street car.

S. J. Mallion

Owing to the general business depression prevailing in practically every country, industries, with a few exceptions, were less active than in former years. However, I found that our manufacturers were carrying on with a determination to solve their industrial problems in the hope that business conditions would return to normal in the near future. Several new factory buildings were erected in this district and a number of additions made to existing buildings. In this connection I desire to acknowledge the hearty co-operation of the city architects and building inspectors, which has simplified matters in having changes made in the plans rather than alterations to the buildings after they have been erected.

When making inspections, many new machines of the most modern type were observed. Primarily these machines were installed for the purpose of lowering overhead expenses as each takes the place of one or more employees, but there are other advantages, as the finished product is almost perfect and production has been greatly increased, an important factor in these strenuous times of competition. The makers of these machines had guarded well all the dangerous parts, thus making a fairly safe working condition for the operators and those working in close proximity. Generally speaking, the factories are in good condition, but although the greatest care has been exercised in making recommendations with a view to eliminating possible labour hazards, many accidents have occurred which it was practically impossible to foresee and guard against. One particularly pleasing feature of accident prevention is the result of the campaign to have every power elevator equipped with mechanical interlocks. In comparing the records of the years prior to the introduction of interlocks and those of the present time, we find that results are most gratifying.

All factories producing dairy products in this district were in good condition, clean, well lighted and ventilated. This same condition existed in all food producing factories and shops. The canning industries had a very busy season;

tomatoes came in much earlier this year and ripened so fast, that although every available square foot of factory working space was utilized in the greater number of factories, it was still found impossible to keep up with the rush, so there was no other alternative but to work overtime in order that the food would not be wasted, and the grower have a market for the results of his many months of hard labour.

J. Monteith

In reviewing conditions in this district for the past year, during which all plants were inspected once and in a few cases twice, it may be said that business has not been so good as in the previous year. Several plants had to close down for a short time and most of them had to operate part time during a portion of the year. Advantage was taken of this by some firms to make improvements, put on the necessary guards, and have the factories cleaned up generally.

A word on sawmills might not be amiss owing to the number of these mills operating in the territory coming under my inspection. A saw mill is an interesting and highly organized unit in industry, and its interest is heightened by the fact that the completed product from the log to the piled lumber takes a very few minutes. The modern rapid gun-shot or steam feed has a strong tendency to increase the danger, owing to its high rate of speed, and the increased rapidity with which the men on the carriage and at the saws are compelled to work. The dangers in saw mills are often augmented by lack of room. There are few saw mills to my knowledge that have sufficient room to safely operate the machinery contained, many of them having doubled their production without increasing the size of the mill, thus dangerously crowding the machinery, and leaving insufficient space for passages. Another feature is that the inspection of saw mills never becomes monotonous, owing to the fact that no two mills are alike. In going through many of them the inspector becomes quite interested in his own safety, and thus is more alert in detecting hazardous conditions.

In the inspection of saw mills it is seldom necessary to enter into any serious argument as to the ventilation or sanitary condition of the mill. Both ends of the mill are always open, and indeed in some cases both sides, and as they are almost invariably built on the bank of a lake or river, the supply of fresh air is always assured. The smell of the new lumber is always a beneficial as well as a pleasant feature of the saw mill.

The lath mill, which is an adjunct to every large saw mill, requires close attention on the part of the inspector, on account of the custom of employing boys under the required age, which at one time was much too common. A similar difficulty was experienced in the shingle mills, which are also adjuncts to the saw mills, where boys are useful in packing shingles.

Miss J. W. Ogilive

Many women are employed in laundries operating various machines and for this reason it is very necessary that the machines they operate be amply guarded to ensure their safety. While accidents on these machines do not occur very often, when they do occur they are usually of a very serious nature which makes the guarding of them very important. It is good practise in the case of mangles and other ironing machinery which operate on steam pressure direct from the boiler to have safety valves and steam guages placed on each piece of equipment in the steam line. In this way if the pressure in the boiler should at any time exceed the safety pressure of the individual machine the valve at that piece would unload thus averting a possible explosion.

By comparing 1929 recommendations with those of 1930, a decided improvement in sanitary conditions in factories is apparent. Yet there are still some cases where several inspections have to be made to get the desired results. Ventilation to be effective must vary according to the peculiarities of the business operated and also to the construction of the building. Conditions in this respect have improved.

Mrs. E. Scott

This past year was unusual and quite unexplainable. In spite of so much talk of unemployment and hard times many factories were found working full staff and maximum hours and in several cases asking for overtime permits, in fact, some had the best year in their history and again other factories in my territory manufacturing the same articles were doing practically nothing.

The law regulating the hours of labour for women and girls requires close attention. If women and girls are obliged to labour in factories and workshops, their health and comfort must be looked after, and where employers are disposed to insist on them working in excess of the prescribed hours the arm of the law should be put forth to shield them. It is also true that in many cases where girls and women were found working more than sixty hours per week it was in accordance with their own wishes, as in certain kinds of trades the busy season extends only from six to eight months and the income for the whole year must be earned in that time. The complaints, however, in regard to working more than ten hours per day during the busy season came largely from millinery and dressmaking establishments. This was due chiefly to those purchasers who do not realize that by withholding orders until the last minute, as it were, somebody is paying for their carelessness. If they would exercise thought there would be little necessity for overtime permits. Employers of course cater to their customers, and require their employees to co-operate in satisfying them. However, in the majority of workshops employees do not exceed nine hours per day, which is long enough in this strenuous age, when nearly all the work is done at high nervous tension. Even shorter hours would be in order. Employers are desirous as a rule of conforming with the requirements of the Act, but a strict enforcement of the law should be made, and permits withheld from all who cannot give good and sufficient reasons for requiring them. The fact remains that overtime after ten hours per day is injurious to the health of young girls and women in workshops or factories, but this is a difficult matter to satisfactorily arrange, as trade conditions regulate the demand.

H. Stevenson

The development of the hard abrasive wheels in recent years has brought about the virtual passing of the old sandstone grinders and has opened up a wide and diversified field for the use of grinding wheels. The use of these hard wheels has lessened to a great degree the dust hazard and particularly the hazard of silicosis, but perhaps the wide use of the hard abrasive wheels has increased the hazard of shattering wheels due to the great speeds at which they are driven to maintain their greatest efficiency in their widened sphere of steel cutting, rough grinding, etc. The bonding elements used by the manufacturers and their baking processes render the finished wheel reliable in most cases at the speeds recommended by them. Occasionally, however, due to some flaw in manufacture, careless storage, side grinding on a thin wheel, or some other reason, a wheel does shatter, with probable dangerous results to the operator and others in the vicinity.

With these considerations in mind, protective hoods and exhaust systems are installed for the safety and welfare of the operators of abrasive wheels, and protective bands, grooves and chucks are built into the wheels for the same purpose. Protective hoods that properly protect the operator from a shattered wheel and which are also connected with an exhaust system for the removal of particles from wheel and metal during the grinding process are deserving of a word here. Protective hoods should always be used on every operation where the nature of the work will permit, and must always be used with wheels which are not provided with protection flanges, chucks, or bands. Hoods should be so mounted as to maintain proper alignment with wheels and the fastenings should have ample strength to minimize displacement in case of wheel breakage.

The maximum angular exposure of grinding wheel periphery should be the least that will enable the work to be done and in the case of top grinding should not exceed an exposure of 60 degrees. In the case of swing grinders and portable grinders where the work is done on the bottom of the wheel the exposure may be as much as 180 degrees but in these cases the top half of the wheel should be protected at all times. Hoods should be constructed with an adjustable tongue which can be adjusted to constantly decreasing diameter of the wheel in order that the angular protection of the wheel may be always maintained. The hood should enclose the spindle end, nut and flange projections, if any. The protection hood should be connected up to an exhaust system for the removal of dust particles from wheel or stock, etc.

The speeds of abrasive wheels vary according to their manufacture for certain purposes. In the case of rubber, shellac and other organic bonded wheels the speeds may be higher than in the case of the vitrified and silicate bonded wheels. In most cases the speeds specified by the manufacturers are a reliable guide and should not be exceeded.

In this district although much of the work is dangerous which the employees are called upon to perform, accidents have shown a very large decrease, and it is hoped this will continue. There are several large plants in which safety committees have been organized and are meeting regularly, which are a great assistance to the inspector. The greatest percentage of accidents appears to be in factories where inexperienced employees are put on machines which are dangerous if not properly handled and these employees, anxious to make good, become somewhat reckless with the resultant accident.

There have been a few cases where complaints were received of female help working in bake-shops at night and on Sunday. These, however, were straightened out after the inspector had interviewed the managers of the plants concerned. The Adolescent School Attendance Act is being observed by practically all employers in this district, not a single violation having been found by the inspector during the year. The Minimum Wage Act is also generally observed and Minimum Wage cards posted in all factories where female labour is employed. The Stationary Engineers Act is well observed in this district and engineers with certificates are employed in all plants requiring same under the Act.

The enforcement of Section 58 of our Act takes up a considerable part of the inspector's time owing to the fact that he has to visit all apartment houses, churhces, service stations and every place where a boiler or other pressure vessel is in use, and to see that the inspections are carried out as required by law.

H. W. WINNETT

In calling on manufacturers it is noticeable that the more progressive among them are paying more attention to the social and welfare side of business than was formerly the case. They have discovered that a contented employee is of far more value than one who is discontented. One firm in Sarnia maintains a fine building as a club for its employees, where social gatherings are held each week by the employees and their friends. The writer had the pleasure of attending a luncheon at this hall, a weekly affair held by the executive of the company. There matters pertaining to the business of the firm are discussed and also anyone who has a grievance or problem can bring it before the assembly and get advice and help to the mutual benefit of all. This creates a good feeling and reacts to the advantage of the company.

With reference to the work assigned to me in polishing, grinding and buffing plants the attendant hazards have been fairly well remedied by effective methods. Ventilation is one of the most important matters with which a factory inspector has to deal and employers have had impressed upon them the necessity of providing proper ventilation in workrooms and factories, because of the danger to the health of their employees from impure air. The employer or architect who neglects to provide for adequate ventilation cannot be censured too severely. While some employers excuse themselves for neglecting this very essential requirement of the Act because of the difficulty of installing proper systems of ventilation in old factories constructed without considering this necessity, it is pleasing to note that in many cases efforts are made to improve the condition of the workrooms in this respect. The majority of employers realize that their employees will work more efficiently and with better results when the surroundings are comfortable. The ordinary method of ventilating by the opening of doors and windows has had its day and should be laid aside with all other primitive and obsolete methods.

J. PENDER WEST, EXAMINER OF PLANS AND INSPECTOR

Although the last year has been generally regarded as a period of gradually increasing depression, it is evident that a large proportion of industrialists have supreme confidence in the future of this Province. During the year plans for buildings to the value of over twenty-one million dollars have been submitted for approval in accordance with the provisions of The Factory, Shop and Office Building Act. Although this is about forty per cent. less than the figures for last year, when the amount was greatly in excess of any previous year. the total may be considered as satisfactory in view of present conditions. The figures include factories, 53.8 per cent., office buildings, 38.9 per cent. and shops, 7.3 per cent. It is interesting to note that almost thirty per cent. of the amount scheduled for factory buildings has been used for extensions to existing plants, indicating, as it does, the confidence of experienced manufacturers in the certainty of better times near at hand.

It is extremely gratifying to be able to express deep appreciation of the co-operation consistently received from architects and engineers in designing new buildings and alterations and additions to existing buildings. A thorough grasp of the principles underlying the operation of the Act is apparent and suggestions from this Branch are accepted with a cordial desire to obtain the best results in connection with the safety and health of the employees in the building.

Exits from buildings for use in case of fire form one of the most important points to be considered in planning and it should be remembered that location of exits is equally important as their number. There should be no part of the building where the occupants do not have two means of exit always available, so placed that both cannot be cut off at the same time.

External metal fire escapes are never so satisfactory as enclosed stairs forming an integral part of the building and the protection offered, especially in the case of tall buildings, is often more apparent than real. Ice and snow often render them dangerous to use and necessitate frequent clearing to ensure safety. The psychological effect upon nervous persons, especially girls, of being driven out of a building by fire to find themselves perched high in the air upon a fire escape which to them appears fragile and unprotected, has also to be considered. It is found that this feeling of fear can be partially counteracted by enclosing the escape and the practice of enclosing with heavy wire mesh has proved of benefit.

Another point to be remembered with reference to fire escapes and other fire exits is the necessity of maintaining at all times free access to them. In a surprising number of buildings inspectors find the door or window leading to the fire exits blocked by merchandise, furniture or rubbish or they are locked or otherwise made impossible to open in case of emergency, regardless of the fact that human lives are thereby endangered.

An interesting development in modern industrial buildings is the effort to eliminate or diminish noise and vibration. Research has demonstrated that a very serious loss of efficiency is caused by continuous noise and that the hearing and nervous systems of workers are impaired to a marked extent. It has also been shown that a large proportion of the noises in factories and offices can be eliminated by the use of sound deadening materials in walls, ceilings and floors. In one factory now being erected, it is estimated that eighty-four per cent. of the noise and vibration incidental to the industry and generally regarded as unpreventable, will be dissipated by the use of sound insulating materials in the construction of the building and by using rubber or cork foundations for machinery. It has also been demonstrated in actual practice that most of the noise produced by typewriters in offices can be prevented by improvements to the machines and the rooms in which they are operated.

An increasing number of plans show that the desirability of providing refreshment rooms for employees, generally in the form of cafeterias, is acknowledged. This is especially of benefit in the case of female employees, it being a matter of common knowledge that only a small percentage of female workers partake of a substantial meal before leaving home in the morning and a large proportion do not compensate for this by taking sufficient nourishing food at mid-day. The opportunity of securing a substantial well-cooked meal at a nominal cost is invariably appreciated and the health and efficiency of the workers are improved. This effect is so well recognized by many large employers that a full mid-day meal is provided free to all their employees.

The value of a first-aid room and proper equipment in any plant is often overlooked. The result of such a provision was emphasized in the mind of the writer on the occasion of a recent visit to a large factory employing some 400 hands. A well-equipped first-aid room with a full-time trained nurse is provided with the result that, during the past year, only one "lost time" accident had occurred, a case of septic poisoning from a minor injury which the employee had thought trivial and did not report for first-aid.

A point often overlooked is the necessity of providing toilet and washing accommodation for the engineer of the building. It is not unusual to find that the nearest accommodation for this employee, whose work is generally in the basement, is on the second floor. Apart from the usual objection of tenants to the use of their toilets by a workman whose occupation is of a dirty nature, the fact that the boilers and engines are left untended for an uncertain period is not conducive to safety.

District Inspectors

The following is a list of the factory inspectors of the Province, showing the district in which each is responsible for the proper observance of the regulations as set forth in *The Factory, Shop and Office Building Act:*

J. H. Ainsborough, *66 Pacific Avenue, Toronto.*—Mr. Ainsborough's industrial district is the City of Toronto, including Lansdowne Avenue, Bloor Street, Dundas Highway, including Cooksville, C.P.R. and C.N.R. West, North and East, excluding Woodstock, Drumbo, Tavistock, Stratford, Millbank, Listowel, Gowanstown, Harriston, Palgrave and Greenriver, but includes East C.P.R. Lakeshore Railway and C.N.R., but excludes Bayside and Anson, but includes Prince Edward County; and for cheese factory inspection purposes includes the Southwest portion of Northumberland and Peterborough Counties South and West of the C.N.R. between Peterborough, Anson and Trenton.

R. Albrough, *25 Grosvenor Avenue, Sault Ste. Marie.*—Mr. Albrough's district is west to Manitoba boundary line and East, including St. Joseph's, Cockburn, Manitoulin Islands, French River, North Bay to the Quebec boundary line.

H. Bourne, *634 Runnymede Road, Toronto.*—Mr. Bourne covers all districts in the Province of Ontario for the purpose of investigating foundries.

W. T. E. Brennagh, *59 Kensington Avenue South, Hamilton.*—Mr. Brennagh's district is G.T.R. main line West to London (exclusive) East to Niagara Falls, South and East of London and Port Stanley line, North C.P.R. and G.T.R. to Bucke and Tavistock exclusive of Milton, Branchton and Ingersoll North.

H. A. Clark, *263 Dovercourt Road, Toronto.*—Mr. Clark's district is the City of Toronto, both sides of Spadina Avenue, and Road, Caldow, Forest Hill Village, to City limits on the Northeast of Lansdowne Avenue, and Bloor Street intersection and South including Toronto Harbour, West, including Clappison Corners, Aldershot to Lake Ontario, but excludes South of the C.P.R. excepting Cooksville and Dundas Highway.

W. C. Crozier, *381 Division Street, Kingston.*—Mr. Crozier's industrial district includes Brockville, County of Leeds, and North, excluding Perth, Smith's Falls, and Glen Tay, to Calabogie, Renfrew, Egansville, Barry's Bay and Madawaska, but includes Sharbot Lake, Wallace, Bancroft, Wilberforce, Mumford, Highland Grove, Baptiste, Coehill, and Peterborough and South including Campbellford, Anson, Belleville, Amherst and Wolfe Island, but includes Prince Edward County; but for cheese factory inspection includes the Counties of Northumberland, Peterborough, Hastings, Lennox, Addington, Frontenac, Leeds, Grenville and Dundas, except that portion of Northumberland and Peterborough Counties South and West of the C.N.R. between Peterborough, Anson and Trenton.

J. P. Ferguson, *370 Blackthorn Avenue, Toronto.*—Mr. Ferguson's district is the City of Toronto, Yonge Street, East side to the Don River including Harbour and County of York, east side (excluding Scarboro Junction and Greenriver) to Lake Simcoe exclusive of Atherley and West including C.N.R. (Allandale Line) and Highway to Craigvale.

W. S. Forster, *336 McLeod Street, Ottawa.*—Mr. Forsters' industrial district is East and South to Maitland, St. Lawrence River and Quebec boundary, North and West including the County of Grenville, Smith's Falls, Glen Tay, Calabogie, Airy, but excludes North Bay and the T. and N.O. Railway, also C.N.R. transcontinental to Quebec Boundary line, but the Counties of Lanark, Carleton, Russell, Stormont, Prescott, Glengarry and Renfrew are included for cheese factory inspection.

Miss Nina Garden, *150 Herkimer Street, Hamilton.*—Miss Garden's district is Niagara Falls, Fort Erie and South Lake Erie, West, excluding Port Dover, Simcoe, Woodstock, and includes Tavistock and North C.N.R. Main line between Hamilton and Eastwood.

Mrs. Eleanor Gurnett, *102 Kingswood Road, Toronto.*—Mrs. Gurnett's district is West side of Yonge Street to and including East side of Bathurst Street, also North to City limits and South to and including the Island, City of Toronto, and then North and West to Quebec and Manitoba Boundary lines excluding Fergus, Caledon East and Linwood.

Miss N. Hamilton, *11 Osborne Street, Ottawa.*—Miss Hamilton's district is bounded on the West by Napanee, Yarker, Sharbot Lake, Pembroke, Renfrew, Derland, Thorncliff and Kearney, and North and East to Quebec boundary.

Mrs. G. E. Hornell, *50 Mimico Avenue, Mimico.*—Mrs. Hornell's district is West side of Bathurst Street to City limits, North also South, City of Toronto and West including Shakespeare, Innerkip, Caledon East, Fergus and Linwood.

S. J. Mallion, *74 St. Vincent Street, Stratford.*—Mr. Mallions district is Fordwich, Gowanstown, Stratford, St. Mary's, London, St. Thomas, and Port Stanley, South and West to Border lines, including Ingersoll Junction on the C.P.R. and North including Teeswater, Kincardine and Goderich.

J. Monteith, *Queen Street, Humber.*—Mr. Monteith's district is the City of Toronto, West side of Yonge Street, including the water front and West (excluding Spadina Avenue and Road) and North to City limits and East including Greenriver, and North excluding Wallace, Bancroft, Airy, North Bay, French River and Caledon East, but includes Southampton, Harriston and the Bruce Peninsula.

Miss J. Ogilvie, *118 Centre Street, St. Thomas.*—Miss Ogilvie's district is bounded on the East by Port Dover, Simcoe, Woodstock, Tavistock Junction, Palmerston and Teeswater and Lake Erie on the South and West, and North-west by Lake Huron and River St. Clair.

Mrs. E. Scott, *23 Sheldrake Boulevard, Toronto.*—Mrs. Scott's district is East side of Yonge Street to City limits, North also South, City of Toronto, and East excluding Napanee, Yarker, Sharbot Lake, Pembroke, and Renfrew, but West and North including the County of Ontario.

Hugh Stevenson, *22 Hambly Avenue, Toronto.*—Mr. Stevenson's district is Toronto Harbour East of the Don River and C.P.R. to Leaside Junction and City boundary line to Victoria Park Avenue.

H. A. Winnett, *75 William Street, London.*—Mr. Winnett's district is the Province of Ontario excepting the City of Toronto, for the purpose of investigating polishing, grinding and buffing plants.

Apprenticeship Branch

INSPECTOR OF APPRENTICESHIP: A. W. CRAWFORD

DISTRICT INSPECTORS: GEORGE B. EVANS, FRED J. HAWES, WALTER THORNE, J. R. JOHNSON, CHARLES E. NEEDHAM

The Apprenticeship Act has been in operation for two years and the development of the work to date is encouraging. Many problems remain to be solved and considerable opposition has still to be met before suitable programmes can be worked out in each designated trade, but a satisfactory beginning has been made. The scheme of apprenticeship, as set forth in the Act and regulations, is almost completely organized and it is expected that the school programme will be in full operation during the coming winter.

It has been found impractical to carry out in full the plans of the Construction Apprenticeship Council of Ontario, but with the work of the Council as a foundation, the Provincial Apprenticeship Committee has proceeded to erect a structure of apprenticeship which will meet the needs of all designated trades throughout the province. Revision of plans and alterations will be necessary from time to time, but it is felt that the main features of the work have been established and that the necessary changes can be brought about without seriously retarding progress.

During the first year of operation, the activities of the Apprenticeship Branch were devoted to a survey of the apprenticeship situation in the construction industry, to the drafting of regulations, the organization of joint committees in some of the larger centres, and an intensive effort to secure the registration of all minors employed in designated trades throughout the province. Over 1,000 boys were indentured and registered, and practically every employer in each designated trade was made acquainted with the provisions and requirements of the Act. Some peculiar and perplexing conditions were revealed in certain trades and it was early discovered that the scheme of apprenticeship adopted by Order-in-Council could not be applied to all trades in all parts of the province.

The existing legislation and all regulations affecting apprenticeship have been drafted or approved by joint committees of employers and employees in designated trades and have been amended and approved by the Provincial Apprenticeship Committee, before being submitted to the Government. It has been impossible to consult all employers' organizations and every trade union before taking action, but many of these organizations throughout the province have been visited and, with few exceptions, they have endorsed the principles of apprenticeship and have expressed a willingness to co-operate in working out the provisions of the Act. Active opposition has developed on the part of certain groups of trade contractors who feel that the Act and regulations have been put into force without consulting all concerned.

OPPOSITION TO THE ACT

As the work progressed, various organizations of employers and employees in each trade began to take an interest for the first time, others discovered that their particular views and recommendations were not being put into effect; consequently, there developed a certain amount of opposition on the part of some local bodies and a few provincial organizations, who felt that the Act was being administered in an arbitrary manner. This feeling was largely due to the introduction of an assessment scheme, under which all employers in designated trades are required to contribute toward the cost of sending apprentices to school during the winter months. Certain employers, especially those who have no apprentices, cannot understand why they should pay for something they believe to be of no immediate value to themselves. Others feel that any additional tax on employers under existing conditions is an unwarranted hardship. The large majority of employers, however, appear to be willing to pay their share and to support the efforts of those administering the Act.

The opposition which has developed during the past year may have retarded progress, but it has brought to light weaknesses in the existing system and revealed the magnitude and nature of the work to be done before the Apprenticeship Act will function in a complete and satisfactory manner.

Policy of the Provincial Committee

The Provincial Apprenticeship Committee realizes that no one system can be satisfactorily applied to all designated trades in different parts of the province. but it is faced with the fact that, in order to get the work organized and training programmes started within a reasonable time, it is necessary to ignore many of the local problems and some differences of viewpoint which will ultimately necessitate amendments to regulations and variations in the training programmes for each trade.

Even the most active and bitter opponents of the existing scheme admit the need for organized apprenticeship and the desirability of legislation which will enable the industry to regulate the conditions and requirements of training for young workers. It is, therefore, imperative that those responsible for the administration and operation of the Act secure the advice and co-operation of as many of the organizations of employers and employees as possible and proceed to work out a scheme or schemes of apprenticeship which will meet the most pressing needs of the industry without imposing an excessive burden or hardship on employers in any designated trade.

Changes During the Year

In order to overcome the objection that general contractors only were represented on the Provincial Committee, Premier Ferguson, during the month of May, requested the Provincial Builders' Exchange to name representatives to replace two members who voluntarily resigned. In September, two representatives were named by the Exchange, but these gentlemen resigned after attending one meeting. They have not been replaced and it appears inadvisable to make fresh appointments for the time being.

Regulations affecting the schooling of apprentices have been amended to conform with the assessment scheme and it has been found necessary to modify the regulation requiring continuous employment by defining this term as "employment for the apprentice during at least forty-four weeks in each year of the apprenticeship period." This period of employment includes the eight weeks in school during the first and second years.

The minimum wage rate which was set forth in percentages of the journeyman rate for each year of the apprenticeship period has been abolished and the following suggested rate adopted:

For the first year—15 per cent. of the current journeyman's rate in the district when and where the indenture is signed.
For the second year—20 per cent. of the same rate.
For the third year—35 per cent. of the same rate.
For the fourth year—55 per cent. of the same rate.

Provision is made, however, that in no case shall an apprentice receive less than the following amounts for a week of forty-four hours:

For the first year	$ 6 00 per week
For the second year	8 00 per week
For the third year	12 00 per week
For the fourth year	16 00 per week

ASSESSMENT

Perhaps the chief development during the past year was the inauguration of the assessment scheme, under which all employers in designated trades are assessed for the purpose of paying a living allowance, in lieu of wages, to apprentices while attending day classes.

Heretofore, employers have paid the wages of apprentices while in attendance at day classes, but, under the new assessment scheme, boys sent to school will be struck off the payrolls for the eight weeks period and paid a living allowance of ten dollars per week from the Assessment Fund. It is felt that, since all employers in the industry will be benefited by the proper training of apprentices, all should share in the cost of producing an adequate supply of skilled workers. By distributing the cost over the whole industry, the burden on any one employer will be kept at a minimum. The rate of assessment to cover the cost of classes for the coming winter has been set at one-eighth of one per cent. of the payroll for 1929.

The introduction of the assessment scheme necessitated an increase in the staff of the Apprenticeship Branch and in December last, Mr. George Chambers, who spent some years with the Workmen's Compensation Board, was transferred to the Apprenticeship Branch as Assessment Officer.

SPECIAL CLASSES FOR APPRENTICES

Arrangements are being made to conduct special day classes for apprentices in the larger industrial centres to be attended by first and second year apprentices from all parts of the Province. The railway fares of boys from outside centres will be paid. The school boards in the centres where classes are conducted will provide free tuition to local apprentices but will charge a fee to cover the cost of instruction, supplies, etc., for boys from outside centres. The fees for apprentices from municipalities where technical or vocational schools have been established but classes cannot be formed will be paid by the school boards in these municipalities, through deductions from the Provincial grants. In the case of an apprentice from a small centre where no vocational school exists, the fee will be shared equally by the Provincial Department of Education and the Assessment Fund.

It is expected that over 300 apprentices from all parts of the province will attend these day classes during the coming winter. The instruction will be of an intensely practical nature, consisting of at least half time in trade training. The remaining time will be divided between such subjects as blueprint reading, mathematics and science directly related to each trade.

Last winter these classes were confined to the cities of Hamilton and Toronto. Apprentices from other centres received no such instruction except through evening classes at a few of the larger vocational schools.

The day classes, with one or two exceptions, were very satisfactory and clearly demonstrated the superiority of such instruction over that received in evening classes attended one or two evenings per week during the winter months. A number of employers who were actively opposed to sending their apprentices to such classes on pay notified the department, at the close of the classes, that they had changed their minds and considered the money spent on such work a good investment. The enrolments in these day classes were as follows:

Hamilton Technical Institute

Bricklayers and Masons	12
Carpenters	15
Plasterers	6
Plumbers and Steamfitters	10
Sheet Metal Workers	7
Electricians	9
Total	59

Toronto Central Technical School

Bricklayers and Masons	8
Carpenters	15
Plasterers	26
Total	49

The plastering class in Toronto, which was the only class open to third and fourth year apprentices, was conducted on Saturday mornings and one evening per week during the full school term. Although an earnest effort was made to provide the best possible instruction. this class was not successful. The apprentices failed to take advantage of the evening instruction and the long gaps between the day classes broke up the continuity of the course. Despite these handicaps, an effort will be made during the coming winter to continue these Saturday morning classes for third and fourth year apprentices. All first and second year boys, however, will receive full time instruction for eight weeks during the months of January and February.

Progress During the Year

Some idea of the growth of the work during the past year may be gained from a study of the appended tables showing the registration of apprentices by trades, the distribution by years in each trade, and the number registered in each trade in the various municipalities throughout the province. The number of registrations to October 31st, 1930, was 1,418, an increase of 369 since the close of the previous year. The number of active contracts, after deducting completions and cancellations, was 1,168—an increase of 140. It will be noted that 71 contracts were cancelled for various reasons during the past fiscal year. This does not mean that 71 indentures were terminated because of violations of the contract by either the employer or the apprentice. Approximately one-third of the cancellations were due to duplication of registration in this office, to transfers from one trade to another, to the death of the apprentice or employer, and to various other reasons over which neither party had any control. It will also be noted that 129 apprentices have successfully completed the apprenticeship period during the year, whereas only 31 completions took place during the previous year. The relatively large number of completions is due to the fact that many of the apprentices registered since the Act came into force had almost completed their apprentice periods before being placed under contract and credit was given for the time served before the contract was entered into. These apprentices received little benefit from the operation of the Act and it will take at least another three years before the benefits of the Act will be apparent in the quality of workmanship and general proficiency of apprentices receiving diplomas.

The extent to which the Act has been put into operation throughout the province is indicated by table No. 3, which also reveals the room for growth in the number of apprentices being trained in all parts of the province.

REPORT

OF THE

Minister of Education

FOR THE YEAR 1930

To His Honour W. D. Ross, Esq.,
Lieutenant-Governor of the Province of Ontario.

Your Honour,—

I beg leave to present to Your Honour the Report of the Department of Education for the year 1930.

The Present Outlook

The information derived from inspection and from other sources indicates that the elementary and secondary schools were in good condition during the period under review. For several years these branches of the educational system have steadily advanced in efficient management and in development. The check to material prosperity which displayed itself during 1930, but which is hoped to be a temporary depression only, produced no visible effect upon the schools. Apprehension existed, on the outbreak of the Great War, and even while it lasted, that education generally would suffer from the social and financial dislocation that overtook the world. These fears were not realized. Instead, the belief spread that increased educational facilities would be the surest method to prevent a relapse into the savagery of war and that a return to normal prosperity would be ensured if the youth of the country, with the future in their hands, were better prepared to carry on their duties as citizens and as bread-winners. Among all the communities directly concerned in the struggle, the Province of Ontario probably applied these lessons more quickly and thoroughly than some other English-speaking regions. The result was the expansion of the ten years that followed. The measures adopted included the setting up of additional provision for vocational training, the extension of the compulsory school age, and the raising of the standard of professional teachers. These and other improvements involved individual sacrifice and heavier expenditures, but the Province has benefited from them and the parents of children have courageously borne the burden in the firm conviction that more and better schooling is an investment and not a needless outlay of money. It would be difficult, now, if not impossible, to shake this conviction. The trying time through which the civilized world is passing, with lessened employment and diminished earning power, is not likely to injure permanently the school system of Ontario which is solidly established and sustained by all classes of people.

The Situation in Brief

The schools are maintained for a growing and intelligent population of over three millions, with all the obligations that implies, and from these obligations it is confidently expected the people will not shrink. Education is supported chiefly and administered wholly by representative boards of trustees selected by the ratepayers and to them is largely due the credit for the advances that have been made. During 1930 a survey of the situation supplies ground for congratulation. There were 7,706 schools of all grades in the Province, not taking account of the attendance and important work done in night schools. That was an increase of fifty schools over the previous year. The teaching force exceeds 20,000 teachers. The enrolled attendance exceeded 747,000 pupils and the average attendance 547,000. All these figures are higher than for the previous year. As will be observed later the improvement in school attendance figures is an outstanding illustration of the popular interest in education. The dimensions to which the investment of money in our schools has attained is impressive. Taking the elementary schools alone, the value of sites, buildings, furniture and equipment in 1929 amounted to $113,327,632. In that year the total receipts of public school boards throughout the Province was $44,488,305. The secondary schools represent a capital investment of approximately $46,500,000 with an annual revenue of $21,211,022 in 1929, the last year for which complete figures are available. The Province has not drifted into this expenditure. It represents a long period of devoted service by school trustees and parents to the public welfare as related to the training of youth with the result that Ontario to-day occupies a notable place in the field of education. At a time like the present it is natural that the cost of education should be scrutinized more keenly than when public and private finances are flourishing, and prudence suggests during any period that care should be taken to see that the value of money spent comes back to the spender. If curtailment in one respect or another, such as capital charges should become necessary, it may be assumed as a cardinal principle that the general efficiency of our schools will be preserved and that no abrupt halt to indispensable outlays is conceivable. This is the spirit which has animated Ontario for generations and represents the reasoned conclusions of its people.

Elementary Training

An evidence of the general desire to exact from the elementary schools the fullest return from the courses of study prescribed for them is to be found in the maintenance of fifth classes and the extension of class work beyond the senior fourth grade. The wish of parents to keep their children under the parental roof as long as possible is a salutary policy. To do this, it is discovered that the home school must not deny pupils the advantages which pupils in larger centres can secure. A movement of this sort has been proceeding for some time in nearly every part of the Province, and the reports for 1930 confirm the fixed intention of parents to extend the elementary programme to the limits assigned to it. The number of such classes has increased. They now number 1,239 and the special legislative grants are conditional upon certain factors such as attendance. Where the required attendance is not obtainable, the work is carried on in many localities without the grant. It was common enough practice at one time, in engaging teachers, to exempt them from the duty of teaching fifth class subjects, but the supply of teachers with higher professional attainments having become adequate there is no longer need to adopt a course which undoubtedly tended to dwarf the work of the rural public schools and send away pupils to more distant schools for the instruction they demanded. The inspectors report that the results of the high school entrance examination in 1930 were satisfactory. The percentage of candidates who passed exceeded that of the previous year. The elementary schools are going forward steadily in the work done in the classrooms and in the provisions for equipment and accommodations made by trustees. The omission in some schools to allot seat work in order to render work by the pupil at home needless is not a feature which can be regarded with approval. It is proper that I should record with gratitude the encouragement given to the school by organizations like the Women's Institutes, a helpful interest which is much appreciated.

Inspection of Schools

When the appointment of county public school inspectors was assumed by the Province, the district inspectors having always been similarly appointed, the counties were relieved of an expense aggregating approximately $175,000 yearly. The policy is working out satisactorily in every way. The change from dual control to the direction of a single authority enables the inspectors to concentrate upon one of the primary duties of their office which is to bring about improvement in the work done in the classroom by inspiring the teachers and pupils and by sympathetically assisting teachers to improve their practice. The effect of this intelligent and helpful aid to more thorough work in the elementary schools will be conspicuous as time goes on and the inspectors are now free from too much local pressure and co-operate loyally with the Chief Inspector. Under former conditions too much of the inspector's time was consumed in administrative and clerical duty, but for the future he will have adequate clerical assistance, permitting him to devote himself to the needs of the classroom. It is not too much to anticipate a fresh stimulus to elementary education from these efforts.

School Attendance

The improvement in school attendance, which has risen by 14 per cent. in rural schools and by 12 per cent. in urban schools, has been produced by the co-operation of all concerned in the work. The supervising officer for the Province, the local officer, the inspectors, the teachers and certain useful agencies outside the schools have combined their efforts. Their excellent labours have hitherto been hampered by the absence of detailed and definite information which, if known, could be effectively applied in every locality. This has now been supplied. For the first time in the history of the elementary schools there was collected in 1930 on a systematic basis, by the teacher of each school, the information respecting absences and the causes of these absences. The actual loss of time in days and the reasons given to account for it are now known with a reasonable degree of scientific accuracy and with this basis to work on the correction of the evil should be easier. The data gathered by the teachers has, moreover, been summarized and conclusions of general interest reached. Illness is responsible for 60 per cent. of the total loss of time, there being 15 per cent. less sickness in rural than in urban schools. The withdrawal of children from school, allowed for a limited time in the rural parts, is classified under home help and accounts for 9.5 per cent. To parental neglect is attributed a loss of 5 per cent. and to physical obstacles 1.5 per cent. There is a considerable loss defined as due to other reasons, that is through unwarranted holidays, lost days at the opening and closing of school terms, withdrawal of pupils for departmental examinations, and so forth. It is certain that some of this loss could be saved by stricter adherence to the law. Truancy has ceased to be a cause of substantial loss and occurs less in rural than in urban schools. The outstanding factor in irregular attendance is clearly illness and this points with unmistakable emphasis to the need and value of extending the health service to every school in the Province. On the whole, the results obtained under the new system of gathering data are satisfactory and creditable to all those responsible for it.

Railway School Cars

The School Cars continue to fill their unique place in the scheme of education. They are carrying instruction to the doors of children who would otherwise be wholly denied. Prior to the advent to the School Car, the condition of these isolated groups of people was pathetic in the extreme. They were out of touch with the world, cut off from most of life's wider interests and sharing little in the stimulus given by mixing with larger groups of people. The outlook for their children, without education, provided a seed ground for the germs of social discontent. The School Car changed all this; human contacts were established hope was revived, homes and lives were transformed, a happier present and a future of promise were assured for both parents and children. No wonder that the periodic appearance of the School Car at its point of call is hailed with joy by the waiting group of boys and girls and its departure equally regretted as they wave it *au revoir*. Naturally, the few days of pause at a school station are packed with work. Rarely is a child absent; they are the only 100 per cent. schools in Ontario, and reports show that such is the success that many children of non-English speech within even four years have reached high school entrance stage, and by virtue of the peculiar system of self-help inseparable from the system, all have developed initiative and self-dependence that are the most desirable by-products of any proper system of education. The School Car has furnished a medium through which other helpful services flow to these remote areas. Accommodation was provided throughout the past year for dental clinics. In connection with these, the teacher on one of the school cars reports: "In four years I have witnessed very painful sieges of neuralgia and ordinary toothache. Here the teeth simply ache till they die. In going over the circuit but once, the dental practitioner extracted 142 teeth, put in 403 fillings, and saved scores from suffering where 90 per cent. never had or would have dental care." The sucess of this venture was so pronounced and the need so pressing that a scheme may be evolved by the Department of Health for separate full-time service of a dental car on the railway lines of the North. Day school work is supplemented by night classes, mainly for adults. Lessons are given in English for the non-English, help in the rudiments of reading, spelling, writing and arithmetic, associated with their daily occupations and simple practical talks on live topics, Canadian history and civics, all of which serve to furnish a knowledge of Canadian principles of government and modes of living, and to inculcate Canadian ideals and the practice of good citizenship. Home craft is also cared for by the wives of the teachers, who are actively interested in thus extending the service of the cars, and, on the whole, the School Car is exercising a transforming influence upon the entire character of living and outlook in these isolated areas of the Province. It is significant that where recent immigrants are within the spheres of the cars' work there is no report of communistic doctrines or red propaganda.

Correspondence Courses

This method of reaching isolated pupils, who, by reason of distance or other causes, would be deprived of a public school training, continues to flourish. It was instituted five years ago with an enrolled attendance of 200. The number of pupils has risen to a thousand and through the help in these remote homes given by parents and guardians the children make surprising progress. The Department receives grateful tributes continually from those who benefit by the courses and already a number of pupils have passed the high school entrance examinations.

The Cost of Examinations

The question of provincial examinations has been under consideration during the year. The increased number of candidates and the larger number of papers to be read and valued tend to make the system of examinations both burdensome and costly. For years the policy of the Department has been to lighten the load as far as is practicable by accepting teachers' reports wherever there appeared to be a reasonable body of opinion behind the movement. Already in the high school entrance examination the local authorities may, under stated conditions, approve of the promotion of pupils on teachers' reports. Pupils whom the teacher cannot recommend must write the examination. This has led to considerable relief especially in the larger centres. The Department has also applied the principle in the Lower School stage of the High Schools to all pupils whose work in the classes is under inspection by officers of the state system, candidates who have prepared by private study or who attend schools not under provincial control being left to write the tests. This, also, has done something to improve the situation. A third step in contemplation is to accept the teachers' reports for the Middle School examination by passing which candidates may enter the Normal Schools or attain the standing of Junior Matriculation into the universities. In the discussion of this proposal, needless to say, the Department has kept in close touch with the universities and the most experienced teachers in the Province. The opinion of the change is generally favourable. It is suggested that the examination should be allowed, without a written test, to all candidates who are ranked at 66 per cent. or higher by their teachers. It is true that this imposes a difficult and delicate duty upon teachers, but the plan has worked out successfully in connection with the Lower School examinations and the teaching body is not inclined to evade any task assigned to it, however onerous that may be. Furthermore the preference for written tests finds its chief support from parents and pupils who seem to have a traditional confidence in concrete results set forth in official certificates. The tendency, however, is to restrict examinations to those which are strictly necessary.

The cost of examinations, sometimes complained of by individual parents on account of the fees, entails a heavy charge upon the Province. In the year 1928-9 the expenditure on this item was approximately $345,000 and the receipts from fees $105,000, leaving a deficit of $240,000. In 1929-30 the expenditure had risen to $372,000 and the fees to $116,000, leaving a deficit of $256,000. Two other considerations, even more serious, must be kept in mind: the strain, physical and mental, upon candidates who prepare for written examinations and the growing difficulty of securing the publication of results in time for the opening of schools so that pupils and parents may make decisions and arrangements respecting the future. The work of the examiners during the summer months invades the period required for rest and recreation and the Department is forced to add a staff of clerical assistants whose services increase the cost. There are other phases of the whole question which need not be dealt with here but I am of opinion that a careful study of the subject should be made by all concerned.

An experiment, analogous to the use and value of examinations, is fully outlined in the report of Professor H. E. Ford, M.A., upon the new-type question papers which were tried out in certain secondary schools of this Province and designed to shed light upon both the trustworthiness and the cost of examinations. It is believed that the new-type questions would reduce materially the time taken to mark answer papers, perhaps by one-half. The conclusions reached by those in charge of the experiment are thus expressed in the report:

> 1. The tests used in this experiment although not standardized but merely informal objective tests using new-type technique have proved to be considerably more reliable than the old-type examinations and to possess more value for individual measurement.
> 2. As regards validity their correlation with the school marks shows that they are almost if not quite as valid as the examinations.
> 3. This conclusion as regards validity is confirmed by the correlation of the test results with the results of the examinations.
> 4. It seems certain that a single test employing new-type technique can be constructed that is more reliable and quite as valid as two old-type examinations in a foreign language.
> 5. A single old-type examination is not a good substitute either from the standpoint of reliability or validity for two old-type examinations in a foreign language.
> 6. As regards cost of reading it is quite evident that the tests can be read for approximately one-fifth of what it costs to read the old-type examinations. This is a very conservative estimate.

The Supply of Teachers

As will be seen by the reports from the training schools the attendance has increased. There were 373 intramural candidates for the High School Assistant's course, while in the Normal Schools the attendance in the first year courses of candidates for either the first class or second class certificate was 1,430. Of these the large number seeking the first class certificate, 687, reflects the higher academic qualifications of those who enter the profession. It requires no great stretch of memory to recall the day when the majority of the teachers in the elementary schools held third class certificates only, obtained after a brief period of professional training at local centres upon a slight academic foundation. When the Model Schools were abolished and additional Normal Schools provided it was believed that the effort to staff the Public and Separate Schools with more highly qualified teachers would prove a long and difficult task and that candidates enough would not present themselves for the higher standards demanded. This anticipation was not fulfilled and the scarcity was of short duration, easily bridged over by temporary expedients. The Normal Schools, increased from three to seven, were well attended from the first and holders of third class certificates quickly improved their professional standing and received second class certificates. The impetus given to elementary education by this policy has effected the steady replacement of first class certificates for second class certificates. The demand of parents that their children should be given the best possible training by competent instructors, coupled with the readiness of teachers to meet this demand, has wrought a remarkable improvement in the elementary schools. The institution of a second year course in the Normal Schools is an advance along similar lines and in due time will mark an equally advantageous result. The truism that the teacher is the school is being applied in all progressive communities to produce the highly trained teacher and in Ontario this policy is intelligently grasped and acted upon. The provision of a second year of training at the Normal Schools was in response to public opinion and was endorsed by the organization of the elementary teachers themselves. The arrangement adopted was that a teacher, after one year's attendance, would receive a certificate upon which at least two and at most four years' teaching could be given. Reattendance for a second year made the certificate a permanent one. The first of these second year courses was set up at the Toronto Normal School last year and the attendance being optional was not large. It is expected that the number of candidates offering themselves in 1931 will be larger and all the facilities needed for the necessary training will be provided. The Regulations adopted in 1930 present the general outline of the purpose and content of the courses which, it is confidently believed, will insure efficient teaching of the subjects of Form V in the elmentary schools and in the Lower School of the Continuation Schools and will enable the teacher to qualify by special training for either rural or urban schools, as he may elect, the certificate being valid in both.

Auxiliary Classes

Education organized on a democratic basis implies equal opportunity for all—equal opportunity to attend school and likewise equal opportunity to benefit from attendance. Two problems relevant to this implication arose at the time of the establishment of a democratic system of education in Ontario, (1) that of bringing the child to the school, (2) that of bringing the school to the child. The first has to a large extent been met by the passage of several Attendance Acts. A solution of the second problem necessitated a modification of the rigidly academic type of education inherited from a previous age. That solution is being effected by the universities through the introduction of optional courses and the establishment of professional colleges. Secondary education has sought to bring about the change through the organization of technical, commercial and agricultural schools. In primary education effort is being made to adjust the school to the needs of the exceptional child through the institution of auxiliary classes. The Auxiliary Classes Act of 1914 provided that, "A board may establish and conduct classes for children who . . . are from any physical or mental cause unable to take proper advantage of the ordinary public or separate school courses." Twenty-six such classes had been organized throughout the Province by December, 1920; 145 by December, 1925, and 283 by December, 1930, the last named year showing an annual increase of 19 per cent. Five thousand eight hundred and ninety-three children now enjoy the advantage of special courses adjusted to their particular needs. Of this number 4,061 of the non-academic, direct-learning type are accommodated in training, promotion and special industrial classes, 1,834 physically handicapped children are cared for in orthopedic, open air, hospital, sight-saving, lip-reading and speech-correction classes.

Auxiliary class work has been organized in 25 of the 27 cities of Ontario (including urban York) and in 12 of the 21 towns having a school population above 1,000. Surveys have recently been conducted in five of the eleven remaining cities and larger towns. Regulations enacted in May, 1930, extend the advantages now enjoyed by children of these larger urban centres to boys and girls of rural communities and small towns by providing for the establishment of Partial Classes, Rural School Classes and Visiting Teacher Units. Classes representative of all three types are now in successful operation. It is believed that provision has now been made for the training of all educable children within the boundaries of the Province.

In contradistinction to the policy pursued in other countries it may be noted that in Canada and more particularly in Ontario the establishment of Auxiliary Classes is a matter within the autonomy of local school boards. Special training for teachers, inspectoral service, free surveys and grants equivalent to one half the excess cost of education are provided by the Government. It is felt that a policy which aims at securing the good will and voluntary co-operation of a community is productive of more beneficial and permanent results than measures of compulsion. The rapid extension of the work and the fact that only one auxiliary class has ever been discontinued is proof of the wisdom of such a policy. Since the institution of junior and senior classes for the training of pupils of the non-academic, direct-learning type the number of commitments for juvenile offences in Toronto has decidedly dininished. Records from these schools show that hundreds of girls and boys who under other conditions seemed inevitably doomed to social wastage are now self-supporting and self-respecting citizens. While an ultimate solution of the problem presented by the socially maladjustable child may not yet have been evolved, it is felt that the substitution of preventive training for subsequent judicial institutional and charitable remedies is affording a large measure of practical relief.

Vocational Training

The various steps adopted to provide vocational training since the Act was passed are in response to a widespread feeling that this phase of secondary education required special development. Noteworthy results have followed. There is now an attendance of more than 20,000 pupils in the day vocational schools and in the evening schools of 44,431. In the latter, it may be noted in passing, there was given at twenty-three places in the Province special instruction to newcomers to Canada whose knowledge of English and of our institutions has been greatly improved thereby. Another function which is being discharged in connection with the vocational school courses is the training of apprentices, and there were established in 1930, at Hamilton and at Toronto, classes for this purpose. It is proposed during 1931 to open similar classes at Windsor and at Ottawa and as time goes on to establish them, as required, at other centres. Both the apprentices-in-training and the employers speak well of the work being done. The enlargement of vocational training in the Province has been made possible by the work of the Technical Training College at Hamilton which continues to afford a variety of courses qualifying for the different subjects taught in the schools. The attendance was 183 when the college was first set up and in 1930 it was 371. The increased number in attendance during the year was due to new courses offered and to the return of graduates desiring to profit by summer courses. The college continues its extension work. It has also established an advanced course in vocational guidance. This will enable teachers assigned by advisory committees to this duty to extend their knowledge of its principles and practice.

Schools Attended by French-speaking Pupils

Under the policy adopted in 1927, the schools which are attended by French-speaking pupils and in which French is an approved subject of instruction are gradually improving in efficiency. The plan instituted at that time is already being justified by its results. It is pleasing to note the general attitude of co-operation on the part of school boards and teachers in the attempt to carry out the proposals of the Department. The Director of English Instruction, the Director of French Instruction, and the inspectors report substantial improvement in the ability of the pupils to speak, read, and write both languages as well as to deal with the other subjects of the course of study. The fact that 962 French-speaking pupils passed the high school entrance examination in 1930 is evidence of the success of the work that is being done. This number represents an increase of seventy-eight over the previous year. There is reason for confidence that the improvement already begun will be progressive and cumulative. The Normal School established at Ottawa for the training of teachers for these schools has shown a remarkable growth in attendance during the three years of its existence. At the session of 1928-29, there were 14 students; at the session of 1929-30, there were 45; and at the present session there are 80 students in attendance. The preparation of increasing numbers of these teachers for first and second class certificates is one of the most hopeful features of the situation and can scarcely fail to raise the standard of the schools. At the June Departmental Examinations, 1930, and at the examinations following the Summer Courses of 1930 very few teachers engaged in schools where French is a subject of instruction failed to secure an advancement in standing of at least two subjects toward finally securing a professional first or second class certificate.

The reports and statistics appended to this report are worthy of the closest attention, dealing as they do with such important subjects as the Library Branch of the Department, the Schools for the Deaf and the Blind and other ,matters which set forth the progress of education in the Province.

Respectfully submitted,

GEO. S. HENRY,
Minister of Eduation.

APPENDIX A

REPORT OF THE CHIEF INSPECTOR OF PUBLIC AND SEPARATE SCHOOLS

Inspectoral Changes

The following changes took place in the Provincial Inspectoral Staff during 1930:

I.—By death:

J. P. Finn, B.A., Inspector of Separate Schools in Frontenac, Glengarry, Hastings, Lanark, Leeds, Lennox, Addington and Stormont Counties.

J. E. Jones, B.A., Inspector of Separate Schools in the City of Ottawa and in Carleton County.

John F. Power, M.A., Inspector of Separate Schools in the City of Toronto.

II.—By resignation:

J. W. Rogers, M.A., Toronto.
H. B. Fetterly, M.A., Dundas County.
Richard Lees, M.A., Peterborough County.

In Memoriam

1. On June 6th, 1930, Mr. J. P. Finn, B.A., Separate School Inspector, passed away at his home in Ottawa at the age of 60 years. Mr. Finn was at one time Principal of the English-French Training School at Ottawa. He was appointed Separate School Inspector in 1907. He was well known throughout Ontario for his educational work and laboured with diligence for the success of the schools under his care.

2. On July 6th, 1930, Mr. James E. Jones, B.A., Separate School Inspector, passed away at his home in Ottawa in his 67th year. Mr. Jones taught at Peterborough and Mattawa, and in 1908 was appointed Separate School Inspector for Northern Ontario and Ottawa. During more recent years he inspected the Separate Schools of Ottawa and Eastern Ontario. Mr. Jones was devoted to his work and did much for the advancement of the Separate Schools under his supervision.

3. Mr. John F. Power, M.A., passed away at his home in Toronto on November 24th, 1930, at the age of 61 years. Mr. Power graduated from Queen's University in 1895. After teaching for several years he was appointed Separate School Inspector in 1903. He spent the year 1907 on the Ottawa Normal School staff. In 1908 he was appointed Inspector of Toronto Separate Schools. This position he occupied until his death. Mr. Power was one of the leading Inspectors in the Province during his term of office. On many occasions he acted upon committees appointed by the Department of Education for report on matters of interest to the elementary schools.

Resignations

1. Mr. Hiram B. Fetterly, M.A., was appointed Public School Inspector for Dundas County in 1918. He resigned at midsummer, 1930, and was appointed

Superintendent of the Institute for the Deaf and Dumb at Belleville, on July 1st, 1930. The schools of Dundas County have made splendid progress during Mr. Fetterly's term of office.

2. Mr. Joseph W. Rogers, M.A., resigned as Public School Inspector for the City of Toronto on August 31st, 1930, having ably filled that position from February 1st, 1912. After teaching in Lambton County for a few years Mr. Rogers joined the Public School Staff of Toronto in 1890, as Assistant Master in Jesse Ketchum School. The next year he was appointed Principal of Earl Grey School, and at the time of his appointment as Inspector was Principal of Dewson Street School. Mr. Rogers gave many years of faithful and efficient service to the Public Schools of Toronto.

3. Mr. Richard Lees, M.A., resigned as Public School Inspector of Peterborough East, on August 31st, 1930. Mr. Lees was formerly Principal of Lindsay County Model School, Science Master at Brampton Collegiate Institute for seven years and at St. Thomas Collegiate Institute for eleven years. He was appointed Inspector in July, 1905, and carried on the duties of his office with industry and zeal. The schools made marked advancement under his leadership.

Public and Separate School Inspectors Appointed in 1930

The following appointments to the Staff of Inspectors were made during 1930:

1. W. J. Stewart, B.A., B.Paed., Assistant Master of York Street Public School, Ottawa, to the County of Dundas, to succeed Hiram B. Fetterly, M.A. His duties began September 1st, 1930.

2. C. F. Cannon, B.A., Supervising Principal of Oshawa Public Schools, to be Public School Inspector for the City of Oshawa from August 1st, 1930.

3. D. D. McDonald, B.A., D.Paed., Principal of Orde Street Public School, Toronto, to the City of Toronto, to succeed J. W. Rogers, M.A., on September 1st, 1930.

4. H. E. Cavell, M.A., B.Com., B.Paed., Principal of Williamson Road Public School, Toronto, to the City of Toronto as an additional Inspector. His appointment dated from September 1st, 1930.

5. L. L. Skuce, B.A., Principal of Dr. MacDougall Public School, North Bay, to be Public School Inspector of District Division VI, with residence at Sudbury. His appointment dated from September 1st, 1930.

6. H. E. Elborn, M.A., Assistant Master of Chesley Avenue Public School, London, to be Public School Inspector of District Division X, with residence at Kirkland Lake. His appointment dated from September 1st, 1930.

7. C. P. Matthews, B.A., of St. Michael's College Staff, Toronto, to be Separate School Inspector succeeding the late J. P. Finn, in Separate School Division XIV, with residence at Kingston. His appointment dated from September 1st, 1930.

8. W. J. Greening, B.A., B.Paed., who taught in De La Salle Separate School and in the Preparatory School to St. Michael's College, was appointed to Separate School Division I, with residence at Port Arthur, to succeed F. J. McDonald, B.A. The appointment dated from September 1st, 1930.

9. A. Gascon, B.A., a graduate of Ottawa University and of the Ontario College of Education, was appointed as an additional Separate School Inspector, and assigned to Separate School Division III, with residence at Cochrane. The appointment dated from September 1st, 1930.

10. J. T. Anderson, B.A., of Stratford Collegiate Institute, was appointed to Separate School Division V.

Transfers

The following transfers were made in the Staff of Inspectors during the year 1930:

1. L. W. Copp, B.A., was transferred from District Division X to succeed Richard Lees, M.A., in Peterborough County East, with residence at Peterborough. The appointment dated from September 1st, 1930.

2. Robert Gillies, B.A., was transferred from District Division VII to York County as an additional member to the Staff of Inspectors in that area. His residence is at Aurora. His appointment dated from September 1st, 1930.

3. O. M. MacKillop, B.A., was transferred from District Division VI to District Division VII. His address is Sudbury, and his appointment dated from September 1st, 1930.

4. F. J. McDonald, B.A., was transferred from Separate School Division I, Port Arthur, to Separate School Division XVII, Ottawa. His address is at Ottawa, and his appointment dated from September 1st, 1930. He succeeds the late J. E. Jones, B.A.

5. C. Charron, B.A., has been transferred from Separate School Division III, Cochrane, to Separate School Division III (A) with residence at Sturgeon Falls. The appointment dated from September 1st, 1930. A new Separate School Inspectorate was created in this area at midsummer, 1930.

Additional Inspectors Needed

As a result of the readjustment of Inspectorates now being made, a number of additional Inspectors will be required. One will be needed in the Niagara Peninsula and one for a new Inspectorate formed of portions of the Counties of Peel, Simcoe and York. An additional urban Inspector, whose duties should begin not later than September 1st, 1931, will be required for the Border Cities of Windsor, Walkerville and Sandwich, and in the City of Hamilton there is now a sufficient number of Public School teachers to warrant the appointment of an additional Inspector.

The number of classrooms in the Separate Schools throughout the Province has increased greatly since the last readjustment of these Inspectorates three years ago, and an additional Inspector will be needed in September, 1931.

Consolidated Schools

In the Province there are twenty-eight Consolidated Schools, located as follows:

1. In the Districts—18.

In Kenora District, Quibell; in Rainy River District, Barwick, Burriss and Morley; in Thunder Bay District, Dorion and Nipigon; in Temiskaming District, Charlton, Hudson and Savard; in Parry Sound District, Byng Inlet, Katrine, Nobel, Point-au-Baril and Sundridge; in Haliburton, Gooderham, West Guilford and Wilberforce; and on Manitoulin Island, Mindemoya.

2. In the Counties—10.

In Welland, Falls View; in Lincoln, Grantham; in Wellington, Macdonald; in York, Humber Heights; in Hastings, Tweed; in Addington, Tamworth; in Prince Edward, Wellington; in Leeds, Mallorytown; in Dundas, North Mountain; and in Carleton, Grant.

Nearly all these schools provide Secondary School education either by Fifth Classes or by the establishment of a Continuation School. A large rural area, therefore, contiguous to the school has educational advantages similar to those enjoyed by the urban centres. At present there are indications that the number of consolidated schools will increase. At the moment, two communities in the northern part of the Province and one in the south are each giving consideration to the formation of a consolidated school section in its respective district.

Travelling School Cars

Dr. J. B. MacDougall presents the following review of the work and progress of Railway School Cars:

The year 1930 saw the addition of another car to the flotilla of moving schools. This car was placed in commission in September and covers a field of which the terminal points are Glenwater and Bears Pass on the Port Arthur-Fort Frances Division of the Canadian National Railways, a distance of 162 miles. It is the most complete car yet installed, from the point of view of comfort, convenience and working equipment. The field has long lain fallow so far as educational opportunities are concerned, and the car received a genuine welcome from the sequestered settlements along the line.

This makes the fifth car in commission. The progress of the pupils through this service has surpassed all reasonable expectations. Pupils of foreign parentage who knew little even of spoken English have reached, in a few years, the Entrance grade. All have developed initiative and self dependence that could come only through a system which throws them largely upon their own resources. Adults have profited no less than their children through night classes with specialized programmes suited to their requirements. The wives of the teachers have shown commendable tact and zeal in helping the families on the side of health and homemaking. On the whole, the cars have fully vindicated their usefulness in moulding the varied racial types into the fabric of strong Canadian citizenship.

Rural School Fairs

We are indebted to Mr. R. S. Duncan, B.S.A., Director of Agricultural Representatives, for the following review of the Rural School Fair movement.

In co-operation with the Ontario Department of Agriculture, rural school fairs were conducted again during the past year. That interest in this phase of work is still growing is borne out by the fact that at the 565 fairs held, 122,606 boys and girls, representing 4,747 different schools, took part. As in the past, the Agricultural Representatives distributed grain, vegetable and flower seeds to the boys and girls. Classes for these different varieties were provided in the prize lists for the fairs which were held in the fall. In addition, classes were also provided for the various breeds of live stock and poultry, exhibits of manual training, sewing, cooking, nature study and fruit.

School Fair Day is one of the high lights of the year for rural boys and girls. From early morning until 4.00 p.m. a programme of competitions and demonstrations makes the day a busy and interesting one. In addition to making the awards, the official judges explain the reasons why, and thus the educational value is at all times kept to the fore. While the Agricultural Representatives are the managers of these events, they are at all times ably assisted by the Public School Inspectors and teachers. According to the Agricultural Representatives, the interest taken in this phase of work by the boys and girls is dependent to a great extent on the interest shown by the teachers and Public School Inspectors. To the Department of Education, therefore, belongs no small part of the credit for the results that have been achieved.

School Health Supervision

Dr. J. T. Phair, Director, Division of Child Hygiene, makes the following report on the work of the Division during 1930:

The extension of this worth-while service to the rural and small urban communities not now served is still one of the major activities of those officers of the Health Department charged with the responsibility for the supervision of child health work in the Province. For some years an organized effort has been made to demonstrate the practicability of a permanent programme in combinations of towns, villages and rural townships. This work has borne some fruit during the year. In two instances such combinations were put into effect, and in one other case the service was re-established after a lapse of some three years. In two other instances the interested municipalities were seemingly seized with the importance of the suggested plan, but postponed action until the trend of the financial cycle becomes upward. It is further hoped that the work done during the year in some of the other areas will be brought to a satisfactory conclusion early in the new year.

Some seventy municipalities, five of which are rural, receive official endorsation for this work in the shape of a grant either from the Department of Health or the Department of Education. The work is carried on without official recognition in ten centres. Eight school sections located in the suburbs of Toronto carry on their own service. There are sixteen combinations of rural school sections and urban municipalities on a more or less acceptable type of service; these are largely situated in the south-western section of the Province.

A consideration of these figures will give some conception of the size of the task still confronting those engaged in the extension of this work. This task could be materially lightened if there were exhibited a larger measure of enthusiasm on the part of teachers engaged in those districts not now carrying on school health supervision.

Music and Art

This work of the schools in the subjects of Music and Art has been extended greatly during the past year, due to the co-operation of trustees, teachers and Inspectors and the liberal grants given by the Department of Education. The following tables of comparison indicate this extension:

Music

School Year	No. of Special Teachers	Grants paid to Teachers	No. of Boards	Grants paid to Boards	Total Amount of Grants
1928-1929	142	$6,140 00	155	$4,635 23	$10,775 23
1929-1930	187	7,344 00	349	10,563 00	17,907 00
Increase	45	$1,204 00	194	$5,927 77	$7,131 77

Art

School Year	No. of Special Teachers	Grants paid to Teachers	No. of Boards	Grants paid to Boards	Total Amount of Grants
1928-1929	98	$4,264 00	37	$1,526 25	$5,790 25
1929-1930	123	5,127 00	54	1,850 25	6,977 25
Increase	25	$863 00	17	$324 00	$1,187 00

The correspondence constantly being received at the Department of Education from local organizations, trustees, teachers and individual ratepayers, indicates that a greater interest is being taken in Vocal Music and that more and more people are desiring a full course in this subject in the elementary schools. In a number of the larger urban centres instruction in instrumental music is also being given after school hours.

The Penny Bank

Mr. J. R. Littleproud, Inspector for the Penny Bank of Ontario, has been good enough to present the following statement showing the progress of the Penny Bank during the year 1930:

During the year this office continued its policy of encouraging school savings as operated in the schools of the Province through the Penny Bank. I am pleased to note that many of the Public and Separate School Inspectors are giving this project real support. The Penny Bank Inspector reported several times during the year on the splendid co-operation which he was receiving from the local Inspectors. During the year new branches were opened in the schools at Aylmer, Briar Hill, Hawkesbury, Jarvis Street Junior Vocational School (Toronto), Marden, Merritton, North York (S.S. No. 21, S.S. No. 31), Nobleton, Oshawa, Owen Sound, Port Credit, Port Robinson, Waubaushene, Whitby. There are now 448 schools in the system, having a total balance of $1,355,500.00 as at the 30th November, 1930. A recent bulletin issued by the Penny Bank indicates that the financial depression has caused an increase of about 15% in the amount being withdrawn from these accounts and has decreased the amount of the weekly deposits by about 15%. In spite of these facts, the number of deposits being received weekly has been maintained, and the number of savings accounts has been increased. From these data, it is evident that school savings is accomplishing a great service in our schools. A valuable reserve fund has been built up to take care of emergency expenditures. The habit of saving has been so thoroughly inculcated that it persists in the face of adverse conditions.

Summer Courses

Mr. Neil McDougall, Director of Summer Courses, makes the following interesting review of this field of work:

The Summer Courses conducted by the Ontario Department of Education are for the benefit of teachers who desire to spend a part of their summer vacation in an effort to improve their academic and professional standing, and thus to become more efficient in carrying on with a modernized curriculum. No fees are charged the teachers who attend these courses, and no provision is made for assisting them with an allowance for living and travelling expenses except in the cases of those who served overseas during the war, to whom one dollar per day is allowed. That the teachers fully appreciate the opportunity of taking Summer Courses is shown by the constant increase in attendance from year to year. In 1930 the registered attendance was 3,920.

The Courses offered last summer were as follows: In Agriculture and Horticulture, in Art, for Auxiliary Class teachers, in Commercial subjects, for the High School Assistant's certificate, in Household Science, for the Kindergarten-Primary certificate, in Manual Training, in Middle and Upper School subjects, in Oral French, courses for teachers of English-French Schools, in Physical Culture, in Vocal Music, for School Librarians, for School Nurses, in Vocational Subjects. There were also Refresher Courses in Science for teachers in Secondary

Schools and a Refresher Course in English and History for teachers in Elementary Schools.

The Summer Courses for School Librarians was given for the first time in 1930. The main purpose of this course is to train teachers to select and to make the best possible use of School Libraries. To what extent this object was achieved last year may be judged by the following typical extracts from reports of those who attended the course. "The Library Course as given by the Department has proved most helpful and instructive. The great need for well organized and properly administered school libraries I have realized as never before." "I say, unreservedly, that of all the many classes I have attended since graduating from Normal, this course was the happiest, and opened up the most avenues of thought."

Correspondence Courses

Mr. Neil McDougall, Director of these Courses, presents the following review for the year:

The plan of providing a Public School education by means of Correspondence Courses for persons of school age living so far from a school that they are unable to attend, has proved most satisfactory. This plan was begun in 1926, and for that year the enrolled attendance was 200. In 1930 the enrolled attendance reached 1,000. Of this enrolment 320 were in Primary Grade, 166 in First Book, 200 in Second Book, 200 in Third Book and 114 in Fourth Book. Fifteen of the pupils enrolled have passed the High School Entrance examination.

That these Courses are popular and adequately fulfilling the purpose for which they were instituted is attested by the hundreds of letters of appreciation received from the homes into which these lessons are sent. The following extracts are typical: "These Courses surely deserve the praise and appreciation of all concerned." "We think they are one of the wisest and best things ever begun by the Department." "We think our child is doing just as well as if she were attending school."

Interchange of Teachers within the Empire

Mr. Neil McDougall, who is in charge of these interchanges, reports as follows:

So far as interchanges of Ontario teachers with teachers in other parts of the Empire are concerned, the plan agreed upon at the Imperial Education Conference, held at London, England, in 1923, is being followed. By this plan teachers during the year of exchange retain their own salaries and the year is credited to them for all educational purposes the same as if it had been spent in their own schools. This interchange of teachers and the interchange of correspondence of school pupils in various parts of the Empire is making a very definite and important contribution to Empire unity.

During the school year 1930–1931 thirty-one Ontario teachers are on exchange with teachers in other parts of the Empire or with teachers in other Provinces of Canada. Of these there are twenty exchanges with overseas teachers and ten inter-provincial exchanges. In addition to these there is one exchange between Miss Grace A. West, B.A., of Pembroke Collegiate Institute with Miss Dorothy Hay, B.A., of King Edward Grammar School for Girls, Birmingham, England. The inter-provincial exchanges are becoming very popular. For the present school year, these include exchanges between Ontario teachers and teachers in British Columbia, Alberta, Saskatchewan and Nova Scotia.

School Attendance

Dr. J. B. MacDougall, Chief Attendance Officer, makes the following general review of School Attendance for the year:

School Attendance is a vital factor in school progress. This truth is gaining active recognition in the home where the key to improvement and the strength of the cause really lie. It is becoming a rare matter for the parent to wilfully detain the child merely on the ground of convenience or even on the plea of needed help. The exceptions to this rule are being slowly narrowed down in number through the vigilance and the well directed effort of the attendance forces.

Under the new system of recording and reporting absentees, these forces, viz., the teacher and the attendance officer under the supervision of the Inspector, are co-operating closely with the home with well marked results in the way of improvement. Rural areas are confronted with handicaps of a special kind that are difficult to surmount. But these areas are measuring up very favourably with urban centres and, in a few cases, owing to fine organization of the forces the former threaten to outmatch the latter in attendance. Boards of Education and Municipal Councils are making a more careful selection of attendance officers, and in the larger centres social organizations and welfare workers are helping to solve case problems which might well baffle the teacher and the attendance officer with their limited powers. Where Health units are established they are lending valuable support in maintaining conditions favourable to regularity of attendance. This combined effort will readily reflect itself in the progress of the pupils and in the general efficiency of the schools.

New Legislation re Appointment of Inspectors

Previous to July 1st, 1930, only the District School Inspectors and Separate School Inspectors were appointed by the Department of Education. On the above date in accordance with the Amendments to the Public Schools Act, 1930, all County Inspectors became Departmental officials with salaries and expenses assumed in full by the Department of Education. The object of this step was to make the inspection of elementary schools throughout the Province a service as completely detached from local influence or prejudice as possible and to control the duties of inspection in such a manner as to give greater help to teachers in the classroom and more attention to the internal efficiency of the schools.

The first duty of the Inspector, as defined in the Amendment to the Act, is as follows:

"To bring about improvement in the work done in the classrooms by inspiring the teachers and pupils and by sympathetically assisting the teachers to improve their practice."

In Ontario the Inspector has given up too much of his time to administrative and purely clerical duties. Under the Amendments of 1930 the Inspector will receive adequate clerical assistance and it will be the constant aim to focus his attention on the needs within the classroom.

Fifth Classes

There has been a widening of interest in Fifth Classes during the year. Not only are these classes popular and serving a very useful purpose in rural communities but they are gradually being established in the cities so that a greater diversity of programme for the senior pupils of the public schools may be provided.

In the school year 1929–1930 there were 113 Grade A Fifth Classes, an increase of 5; there were 108 Grade B classes, an increase of 20, there were 121 Grade C classes, an increase of 26. In addition there were 1,431 other schools in which Fifth Class work was conducted to some extent. The total number of pupils attending these classes was 9,911.

In the year 1930, there were 4,040 candidates from Fifth Classes who were prepared for the Lower School Examinations. These candidates wrote upon 15,268 papers, and passed upon 12,707 of them. Of this number 8,243 were passed on recommendation, and the remaining number, 4,464, were passed by Departmental Examination.

The legislative grants made to Fifth Classes in 1930 exceeded $45,000.

A New System of Grants

In August, 1930, the Minister of Education announced a new scheme of grants for all the urban and rural Public and Separate Schools of the Province. The new scheme provides for grants on the following bases:

1. Average Attendance.
2. Teachers' Salaries.
3. School Equipment.
4. Teachers' Certificates.
5. Special grants on Maintenance and Capital Expenditures to schools having an assessment per classroom lower than $50,000.

The new system emphasizes the giving of grants to School Boards in proportion to the ability of the local authority to maintain its schools and this in turn gives emphasis to the principle that all children in the Province have a right to receive an equal opportunity with respect to an elementary education in as far as this can be brought about by co-operation between the Province as a whole and the local authorities.

Inspectors' Annual Reports

The General Annual Reports forwarded each year to the Department of Education by the Public and Separate School Inspectors indicate the lines along which progress is being made in Elementary Education.

The following excerpts are from these reports:

1.—Duties of Inspectors.

Perhaps the most important function the Inspector can exercise is to keep in touch with the classroom work of the teachers and by suggestions, by taking part in the lessons, and by actual co-operation with the teacher in the work of the day do what he can to improve the work of the school.

2.—Our efforts have been spent in furthering the following movements:

(a) the improvement of the general appearance of the school buildings and grounds.

(b) the bringing of equipment up to standard.

(c) the installation in the rural schools of indoor chemical toilets.

(d) the obtaining of suitable equipment for the carrying on of the work in agriculture.

(e) the reading course for teachers.

(f) the extension of the work in Household Science.

3.—QUALIFICATIONS OF TEACHERS.

Sixty per cent. of our teachers are carrying on extra mural work towards degrees, towards First Class certificates, or taking university extension cultural courses.

4.—TEACHERS' INSTITUTES.

(1) We have found that the most helpful institutes are those that give half of the time to general meetings where inspirational addresses are given by outstanding speakers with real messages, and where the other half of the time is devoted to Grade sessions where topics suited to each Grade are discussed.

(2) The benefit derived from the Teachers' Institutes is in direct proportion to the amount of interest the teacher takes in them and the extent to which he takes part in them.

5.—SCHOOL ATTENDANCE.

In both rural and urban schools a high percentage of attendance has been maintained. It has been increased from 89.4% to 93.7% based on the total enrolment and to 95.6% on the possible attendance.

6.—PUPILS' WORK.

Constant supervision is being given by the teachers to the work books of all classes in the schools. I have seen the best work books this year that it has been my pleasure to see since I entered upon the work of school inspection.

7.—SUPPLEMENTARY READING.

(1) Supplementary Reading is receiving more attention than formerly. Teachers are encouraging their pupils to read more because they have found that in reading the children acquire a fund of information and more or less of the author's style, both of which lead to better expression.

(2) Boards of Trustees throughout the Province are making valuable additions in books and are selecting them so that all grades will be adequately served.

8.—REPORT CARDS.

A Report Card should be a bond of co-operation serving to unify the efforts of parent, teacher, and child, in helping the child to progress socially, physically and intellectually.

9.—OUTSIDE ORGANIZATIONS.

Outside the school there are certain moderating influences which have considerable effect on the interest in such subjects as Art, Writing, Public Speaking and Essay Writing. The School Fairs, Women's Institutes, Home and School Clubs and the Trustees' and Ratepayers' Association, all conduct competitions in which Public School pupils only are qualified to take part.

The High School Entrance Examinations

In general, the results of this Examination throughout the Province for the year 1930 were satisfactory. The percentage which the number of successful candidates bears to the total enrolment is higher in 1930 than it was in 1929. This year the percentages in the various Inspectorates range from 4.3 to 11.5. In all but a few of the Inspectorates the percentage is in the range from 7 to 8.5.

Special Phases

Along with the movements, general in character, for better teaching, for better buildings, better equipment, better grounds, other movements, more special in character, have made progress, and are deserving of mention.

The Intermediate School, which is to some extent a copy from the English system, is being given a trial. To this school pupils who have at least completed the Senior III Grade are admitted. A programme of diversified courses is given, extending over a period of four years, so that pupils whose abilities are classified as non-academic, may proceed with courses which are more in line with their natural gifts and interests.

A wider acceptance of the Rotary Plan of organization and modification of it is apparent.

In one Inspectorate an earnest attempt is being made to develop a standardized test which will obtain the aptitudes of pupils for school work rather than their intelligence quotients.

In some schools adjustment classes are being organized for retarded pupils, and in certain schools prospective principals are given special experience to fit them for their future work.

General Remarks

The Inspectors' Reports show that the Elementary Schools have gone forward during the year both in the improvement of the work being done in the classroom and in the provision being made for better school grounds, school buildings and equipment.

Provincial and local organizations have shown a keen interest in the schools. In spite of the economic depression existing, all forces having contact with the schools have shown their desire to have the interests of the children provided for without stint or sacrifice.

I am indebted to all officials who have contributed reviews of their work in this report, and to my colleague, Mr. J. D. Campbell, for his hearty cooperation and assistance.

V. K. Greer,
Chief Inspector.

Toronto, February, 1931.

APPENDIX B

REPORT OF THE INSPECTORS OF HIGH SCHOOLS

During the past year there has been considerable activity in many parts of the Province in improving the school accommodations so as to provide more adequately for the steadily increasing enrolment in the high schools. For the following schools, new buildings were completed: Dundas, Earl Haig (Township of North York), Parkdale (Toronto), Port Credit, and Westdale (Hamilton). In the case of the following schools, important additions were undertaken: Barrie, Hagersville, Haileybury, Harbord (Toronto), Niagara Falls South, Niagara-on-the-Lake, Runnymede (Township of York), Wallaceburg, and Waterford. New buildings were proposed for Kirkland Lake and for Prescott. New schools were established at Westdale (Hamilton), and at Kapuskasing, while Scarborough High School was raised to collegiate rank.

The total enrolment for the year 1928-29 was 57,110, and for 1929-30, 64,964. The teachers employed during the corresponding periods numbered 1,955, and 2,047 respectively. This meant an average of 29.2 pupils per teacher in 1928-29, and 31.7 pupils per teacher in the following year. This increase in the size of classes has grave educational significance. It means that in some schools the classes are becoming much too large, and that, consequently, the personal contact between teacher and pupils, which is of great importance in education, is greatly lessened. Education should not only provide knowledge and develop the power to think, but it should also influence behaviour and views of life. The observation of the High School Inspectors in large and in small classes has convinced them that the ratio of pupils to teachers should not exceed the maximum of 30 to 1 permitted by the existing regulations.

The position of physical education in this Province, as in any young country, has been undergoing a gradual change. At first, the amount of physical labour to be done in the home before and after school hours rendered formal physical training almost unnecessary. Even to-day, in some quarters it is argued that "chores" and "home duties" furnish sufficient training. But among general educators and teachers of physical culture, the conviction appears to be growing that organized gymnasium and field work is of basic importance; that the development of big muscle activities is necessary for the effective growth of finer neuromuscular co-ordinations; that in games occur situations that have an important influence in the development of character. This latter belief, more or less clearly realized, probably accounts for the deep interest of public and educators alike, in physical education and in athletics in particular.

The High Schools and Collegiate Institutes of Ontario present a variety of attitudes towards this phase of education. Too many High School buildings possess the most meagre provisions for carrying on adequate physical culture. It is true that in some schools so handicapped the teachers display considerable resourcefulness and ingenuity in using the very limited means which the classroom provides. Even during the present school year, instances are recalled of girls standing on the tops of their desks swinging clubs in perfect time to the strains of music supplied by a table phonograph. It is a far cry from such conditions to those found in buildings of recent construction. In some of these there are two gymnasia, adequately equipped, and a natatorium, which is in almost constant use. In such schools, the work of physical education is in the hands of enthusiasts fully alive to the possibilities of the subject they teach. In at least one city, a beginning has been made in medical supervision. The school nurse, in conjunction with the teachers of physical culture, has undertaken important corrective work, particularly with reference to spinal curvature and deformed feet.

In an increasing number of schools, steps are being taken to provide pupils, who necessarily remain for lunch, with food at cost. In the newer buildings, pupils are able to have their mid-day meal amid comfortable, and often very pleasant surroundings. In some cases, the school authorities take a deep interest in the kind of food chosen by the pupils. It would appear that the use of the school cafeteria presents a unique opportunity for influencing, in a very direct manner, the food habits of the boys and girls.

The High School Inspectors again wish to commend the excellent work of the teachers of this Province. They are effective sources of inspiration to the important group of young Canadians with whom they are in daily contact. Many of them are doing post-graduate work and many are taking advantage of the summer courses offered by the Department of Education and the Universities.

The inspectoral staff was increased in September, 1930, by the appointment of Mr. A. G. Hooper, M.A., Specialist in Classics, and former Principal of the Hon. W. C. Kennedy Collegiate Institute, Windsor.

APPENDIX C

REPORT OF THE INSPECTORS OF CONTINUATION SCHOOLS

Number of Schools

At present there are 220 Continuation Schools in the Province of Ontario. At the opening of the schools in September, 1930, the Public School Inspectors were given charge of the Grade "C" one-teacher schools, in their respective Inspectorates. In all, these amounted to seventeen schools. The High School Inspectors were given charge of thirty Continuation Schools. Thus 173 schools and 394 teachers remain in charge of the two Continuation School Inspectors.

Additional Accommodations

During the summer of 1930 new Continuation School buildings were erected at Agincourt, Mount Albert, Powassan and Sutton. New buildings to provide for both Continuation and Public Schools were erected at Castleton and Seely's Bay, and an addition of two or more rooms for Continuation School purposes was made to the Public School buildings at Wales and Rockwood.

New Schools

During the year new schools were established at Aultsville, Flinton, Smooth Rock Falls and Wellesley. In each of these schools the full time of one teacher and half the time of an additional teacher is given to Continuation School work.

Twenty Years of Progress

During periods of general business depression the attendance at Secondary Schools increases, due to the lack of attractive opportunities in commercial and industrial life. While such conditions may be expected to affect more especially the attendance in larger cities and towns, they have also a very appreciable influence on the attendance at Secondary Schools in smaller centres and in rural districts.

Apart from the influence of varying business conditions, and merely as a means of measuring the increasing desire of rural people to secure for their children a better education as a start in life, we have thought it may be of interest to summarize the progress made in the Continuation Schools during the past twenty years:

1. Number of Schools:	1910	1915	1920	1925	1930
One-teacher schools	67	29	23	36	17
One-and-a-half-teacher schools	....	....	13	23	30
Two-teacher schools	65	98	100	105	123
Three-teacher schools	6	5	8	32	42
Four-teacher schools	....	....	....	5	6
Five-teacher schools	....	....	....	....	1
Six-teacher schools	....	....	....	....	1
Total	138	*132	144	201	220
2. Number of teachers	215	240	273	408	490
3. Attendance	5,917	6,800	†5,823	9,944	10,534
4. Value of equipment	$57.706	$80,961	$117,629	$191,762	$244,000

5. During this period 47 Continuation Schools have been given the status of High Schools. It is interesting to note that these 47 new High Schools now employ a total of 332 teachers.

*During 1913 thirteen county-formed Continuation Schools became High Schools.

†After 1919 the attendance is given for the school year instead of the calendar year.

Improvements in Accommodation

In order to provide class-room accommodation for pupils seeking Secondary School education in the centres maintaining Continuation Schools, and at the same time—in many cases—to provide suitable accommodation for the Public School classes, the communities in which these Continuation Schools are situated have, in the past twenty years, erected 197 new buildings or additions to old buildings.

Efficiency of Work as Measured by Examinations

At public meetings held to discuss the advisability of establishing Continuation Schools the Inspectors are frequently met with the statement that it is not reasonable to expect as successful work in a Continuation School with two young teachers, who may hold little more than First Class Certificates, as can be done in a High School or a Collegiate Institute with a much more mature and experienced staff composed of university graduates, many of whom are specialists in their departments. This argument is used freely by those opposing the establishment of Continuation Schools. It sounds convincing until the facts are examined and the conditions compared. While examination results are by no means the only test of the work being done in a school, they must be accepted as an important test.

When the comparative youth, the limited experience and the rather meagre academic preparation of many of the Continuation School teachers is taken into consideration, one is quite prepared for very moderate examination results, but when, after comparison, it is found, year after year, that these results compare favourably with the results obtained by the larger schools, one is compelled to recognize that other factors besides that of staff must be taken into consideration.

Other Factors to be Considered

Perhaps the most important factor is the smaller classes of the Continuation Schools. These classes usually consist of ten to twenty pupils, as compared with classes of thirty to forty pupils in the larger schools. Small classes permit of more individual attention, more frequent questioning, and closer supervision by the teacher, and necessitate more earnest application on the part of the pupil. Young pupils and slower pupils receive the personal touch and the attention without which they too frequently flounder about and become discouraged.

Another very important factor in the success of the Continuation Schools is one that, by many, may be regarded as time wasted. This is the daily study periods that each form must have, since there are usually three forms and only two teachers. In a well-organized school these study periods may be the most valuable periods of the day. The pupil has definite work to do, under the supervision of the teacher. He learns to work by himself and to depend on himself for results. This develops initiative and self-confidence, and when these qualities are combined with willing application success is assured.

While these two are perhaps the most outstanding advantages of the Continuation School there may be mentioned also the lack of a great many of the attractions that divert the minds of many pupils of the large towns and cities rom anything so prosaic as school work. Also, rural districts and small centres provide a type of pupil usually more serious minded and with a keener sense of responsibility. From childhood they have shared the work in and about the home and these daily duties and responsibilities have aided greatly in developing habits of serious application.

Whatever the causes may be, when the amount of work to be covered in the time that can be apportioned to each of the different subjects is considered, the general success of the pupils attending the Continuation Schools is a surprise even to the Inspectors who visit these schools daily and see the earnest and efficient work done by both teachers and pupils.

Matters for Consideration

1. Many of the counties of the Province are so well provided with Collegiate Institutes, High Schools, and Continuation Schools that the great majority of the children may obtain a Secondary School education with little inconvenience or expense. But some counties are not so well provided with such schools. Ratepayers living at a distance of from five to ten miles from a Continuation School pay the same share of the county and township levy as those living in the same township within a mile or two of the school. In some cases, indeed, these distant ratepayers pay more than those living in the section in which the school is maintained; but, as they live so far away, their children have a small chance of deriving any benefit from the school.

This inequality of opportunity is very pronounced in those counties that have adopted Section 7 (1) (*a*) of the Continuation Schools' Act, whereby 50 per cent. of the cost of all pupils attending Secondary Schools is paid by the county. As this section of the Act is now interpreted, the ratepayers of the section in which the school is situated very rarely have to pay any part of the remaining 50 per cent. of the cost of pupils from the section, as this cost is usually more than met by the amount paid by the remainder of the township. Thus the ratepayers of the section in which the school is situated pay less than those outside and are in a position to derive a much greater benfit from it. Indeed, many Boards in such counties receive more money from the Government, county and township than is necessary to build and maintain the school.

2. At present the course of study permits an option between Agriculture and Science in both Lower and Middle Schools. Since the course prescribed in Agriculture is, in every way, at least as valuable for educational purposes as the course in Science, and, because of the situation of these schools, the source of supply of pupils and the knowledge of Agriculture already acquired by them, one might expect that Agriculture would be the more desirable option. But, though the Agriculture option is taken in a few of these schools, there is little indication that it will become general. The difficulty lies in the lack of a sufficient supply of properly qualified teachers. Frequently the option is taken for a year or two but when a change of teachers takes place Boards find it impossible to secure a teacher competent to continue the work.

3. There are at present fifty Continuation Schools with a staff of three or more teachers. Such schools are required to employ a Principal who holds a High School Principal's Certificate, and may carry on part of the Upper School course.

Some provision might be made whereby such schools may be required to become High Schools when the attendance is sufficient to give assurance that three or more teachers will be a permanent requirement.

No report on Continuation Schools would be complete without some appreciative mention of the earnest and efficient work of the teachers and the deep interest taken in the maintenance of these schools by trustees and ratepayers generally.

G. K. Mills,
J. P. Hoag,
Continuation School Inspectors.

Toronto, Feb. 1, 1931.

APPENDIX D

REPORT OF THE DIRECTOR OF TECHNICAL EDUCATION

1929-1930

Progress During the Year

Continued satisfactory progress is being made in the attendance in the technical schools of the province. During the year 1929–30, the full-time daily enrolment increased from 23,063 in 1928–29 to 25,558, an increase of 10.8%. There was a resultant increase in the teaching staff of 198 persons. The enrolment of part-time students decreased from 2,411 to 2,100, a drop of 311. This is to be expected because of the growing idea that pupils should not leave school before they are sixteen years of age.

Statistical Information

The following tables show the progress of the Vocational Schools:

Day Vocational Schools

	1922–3	1924–5	1926–7	1928–9	1929-30
Number of full-time teachers	286	416	607	795	893
Number of part-time teachers	51	108	148	204	194
Number of full-time pupils on roll	6,987	11,595	17,359	23,063	25,558
Average attendance of full-time pupils	5,518	9,263	13,400	18,228	20,632
Number of part-time pupils on roll	988	1,739	2,729	2,411	2,100
Aggregate student hours of part-time pupils	60,972	237,378	354,089	370,701	248,935
Number of special pupils on roll	1,427	1,875	1,626	1,142	1,437
Aggregate student hours of special pupils	243,074	242,685	166,928	129,738	168,366

Evening Vocational Schools

	1922–3	1924–5	1926–7	1928–9	1929–30
Number of teachers	1,097	1,182	1,225	1,398	1,486
Total number of pupils	33,581	35,764	37,977	41,593	44,431
Aggregate student hours	1,298,746	1,503,248	1,569,940	1,731,553	2,382,929

Summary of Expenditures by Municipalities

	1922	1924	1926	1928	1929
Expenditures	$1,871,614 21	$3,105,235 11	$3,499,380 46	$6,090,938 00	$6,173,009 09
Legislative Grants	638,217 28	672,077 86	813,581 74	933,739 78	1,036,441 57

The year 1929–30 was marked by an extensive expansion in several centres of the accommodation provided for technical school pupils. The fine building in Westdale, Hamilton, housing both a technical and a commercial school was completed by September, 1930, and ready for occupation. In North Toronto, a commodious composite technical and commercial school was also opened in September. In Welland a vocational wing was added to the collegiate, and vocational departments were begun in Sudbury, Haileybury and North Bay. Plans were prepared and work begun on a large extension to the Windsor Technical School. A shop section and a girls' gymnasium were opened in connection with the Technical Institute, Hamilton. The new shop wing of the Sault Ste. Marie Technical School was formally opened in December, 1929, and the commercial department of the Napanee Collegiate was added to the list of departments operating under the Vocational Education Act.

Evening Classes

The constantly increasing interest in the evening classes is a cause for congratulation. The enrolment has advanced from 41,593 in 1928–29 to 44,431 in 1929–30, an increase of 6.8 per centum. The value of this work to this province at large can scarcely be over-estimated to keep pace with the increase in attendance. An ever-widening range of subjects is being offered. Classes in English for New Canadians were conducted at 23 centres, with an enrolment of 3,587. In these classes the attendance is remarkably regular and the pupils appreciative of the benefits received. The oxy-acetylene welding classes, wherever established, have proven helpful in increasing the earning capacity of the students. Such classes as shorthand speed, typewriting speed and retail selling have given that additional efficiency which means success. Undoubtedly the increased available supply of trained teachers for the night schools has contributed materially to the effectiveness of the evening classes.

Training for Apprentices

One of the problems which the technical schools of the province are trying to solve is that of providing adequate opportunity for supplementary training for apprentices to the various trades.

The problem resolves itself into two phases (a) training for apprentices as required by the Ontario Apprenticeship Act and (b) training for industrial apprentices.

During the first three months of the year 1930 special provision was made to furnish instruction for apprentices to the building trades in the Hamilton Technical Institute, and in the Central Technical School, Toronto. In the former city, classes were opened for apprentices in bricklaying, plastering, plumbing and heating, electrical wiring, carpentry and sheet metal work. Approximately fifty were enrolled in these classes. In selecting teachers, trade knowledge was made an essential qualification. Both the apprentices and the employers expressed themselves as pleased with the courses. In Toronto instruction was provided for eight bricklaying apprentices and fifteen carpenter apprentices. Preparations are being made to handle much larger numbers this year, in both Hamilton and Toronto, and to open classes in Windsor and Ottawa. As the work advances, centres will probably be opened in other technical schools.

With regard to the second phase of the question, excellent work has been done in the Hamilton Technical Institute. Apprentices from printing, electrical work, and agricultural implement factories are required to spend two evenings and one-half day each week taking up drafting and academic work. The printing apprentices devote considerable time to trade practice. Several of the technical schools offer training for apprentices in the evening classes. An extension of all types of apprenticeship training in the technical schools is desirable.

The Commercial High Schools and the Commercial Departments in connection with the technical schools are providing vocational training for an increasing number. The total enrolment in the day classes for 1928–29 was 12,301; for 1929–30, 13,011, an increase of over five per centum. In addition, there was an enrolment of 15,493 in the commercial evening classes. The suggested Commercial Courses issued by the Department in 1927 have been quite generally adopted, and have aided in making the commercial training effective.

A new problem has arisen in connection with technical education. Several communities with populations varying from 3,000 to 8,000 have requested that some form of technical education be included in their secondary school courses. Financially, the school with several fully equipped shops is out of the question. These municipalities could afford neither to equip nor to maintain such schools. The number of students available would not justify the expenditure. It is possible that some development of the single general shop with one teacher trained to teach several subjects may be suggested as the best solution of the problem.

F. S. RUTHERFORD,

Director of Technical Education.

Toronto, January 24th, 1931.

APPENDIX E

REPORT OF THE DIRECTOR OF PROFESSIONAL TRAINING

The attendance at the teacher training schools of the Province continues to show a steady increase over previous years.

Enrolment at the Ontario College of Education

	Male	Female		
(1) In the one-year Household Science Course				12
(2) In the High School Assistant's Course:				
Intra-Mural	143	230		
Extra-Mural	8	6		
Summer, 1930	12	25		
	163	261		424
(3) In the courses for degrees in Pedagogy:				
Summer Session, 1930			103	
Winter Session, 1930-1931			77	
Degrees granted, June 1930—(i) B.Paed.			40	
(ii) D.Paed.			5	
				225
(4) In the course for Librarians				28
Grand Total				689

The enrolment in Specialists' and Supplementary Courses was as follows:

(1) Specialists' Course:	Intra-mural	Extra-mural	Total
Classics	13	5	18
English and French	13	20	33
English and German	..	1	1
English and History	43	18	61
French and German	17	5	22
French and Spanish	6	1	7
Household Science	12	1	13
Mathematics and Physics	14	10	24
Science	13	17	30
Agriculture	6	1	7
Art	17	..	17
Physical Education	77	..	77

(2) Supplementary Course:	
For First Class Public School Certificate	37
For Elementary Art Certificate	38
For Elementary Commercial Certificate	94
For Elementary Music Certificate	16
For Elementary Physical Education Certificate	112

Academic Standing

(*a*) According to University degrees held, the teachers-in-training in the High School Assistant's Course were classified thus:

B.A. or M.A.	403
Ph.D.	1
B.A.Sc.	1
B.Sc.	3
B.Sc.F.	1
B.S.A.	6
B.Ho.Sc.	3
B.Com.	6

(2) From universities outside of Ontario there attended the College of Education—one graduate from Dalhousie; two from Mount Allison; one from Bishop's; one from Laval; three from McGill; three from Montreal; five from Manitoba; two from Saskatchewan; one from Alberta; one from British Columbia, and one from London, England.

Enrolment in the Provincial Normal Schools

(1) First Class Course (First Year):

	Male	Female	Total	
Hamilton	15	88	103	
London	23	97	120	
North Bay	10	37	47	
Ottawa	11	57	68	
Peterborough	21	65	86	
Stratford	33	74	107	
Toronto	38	118	156	
Total	151	536	687	—687

(2) Second Class Course (First Year):

	Male	Female	Total	
Hamilton	17	79	96	
London	22	74	96	
North Bay	11	104	115	
Ottawa	26	101	127	
Peterborough	18	71	89	
Stratford	22	51	73	
Toronto	38	109	147	
Total	154	589	743	—743

(3) Second Year Course:

Toronto:	Male	Female	Total	
First Class Course	1	11	12	
Second Class Course	..	3	3	
Total	1	14	15	— 15

(4) Kindergarten-Primary Course:

Toronto:		
First Year Course	29	
Second Year Course	1	
	30	— 30
Grand Total		1,475

Enrolment in Normal Model Schools

	Boys	Girls	Total
Ottawa	230	198	428
Toronto	359	314	673
Total	589	512	1,102

Special Courses

As in previous years special courses in Art and Physical Education were provided for teachers-in-training in the First Class Course. In these the enrolments:

	Art	Physical Education
Hamilton	45	..
London	59	..
Ottawa	..	42
Peterborough	60	..
Stratford	..	94
Toronto	..	25
Total	164	161

Academic Standing in Normal Schools

For the past few years there has been a steady improvement in the academic standing of the teachers-in-training admitted to the Normal Schools. In 1926, of the total enrolment, 30.9 per cent. of those admitted held Upper School standing. In 1927, this was increased to 41.3 per cent.; in 1928, to 45.7 per cent.; in 1929 to 48.1 per cent., and in 1930 to 49.2 per cent. In addition in the year 1930 of those actually engaged in teaching, eighty-two succeeded in raising their professional qualifications from Second to First Class.

Provisional Certificates

In 1930, the Department issued three provisional First Class, thirty-four provisional Second Class, and one provisional Kindergarten-Primary certificates. Of the teachers receiving these certificates, five came from Scotland; eight from England; two from Wales; four from Nova Scotia; one from New Brunswick; two from Manitoba; eight from Saskatchewan; three from Alberta; three from British Columbia, and two from the United States.

Second Year Course

In accordance with Departmental Regulations teachers-in-training who attended any of the Provincial Normal Schools in 1927-28, or in subsequent years, in order to secure permanent certificates must reattend a Normal School for a second year after teaching a period of at least two and at most four years. Provision was made for this Second Year Course and the first class was opened in the Toronto Normal School in September, 1930. The attendance at that date being optional, a large enrolment was not to be expected. However, sixteen teachers presented themselves and are now taking advantage of the course which is designed to, and no doubt will, improve their standing both academically and professionally.

Accommodations

In this report I can but reiterate what was said in 1929 regarding increased accommodation. At the Ontario College of Education extensions and alteration to the present building are urgently needed. For the want of these both students and staff are seriously handicapped. At all the Normal Schools, the proper physical education of prospective teachers calls for enlarged and well equipped gymnasiums.

Changes in Staffs

In October, 1930, Mr. A. C. Casselman resigned the Principalship of the North Bay Normal School, a position which he held since the opening of that school in 1909. Mr. Casselman has for many years given faithful service in our Public Schools, High Schools, and Training Schools, and has made a valuable contribution to the advancement of education in this Province, particularly in

Northern Ontario. There his influence will long be felt in the many schools in which his students have been and are now engaged as teachers. Mr. Casselman was a well equipped teacher and by the graduates of the North Bay Normal School will long be remembered for his efficient instruction, wise guidance, and helpful assistance.

To succeed Mr. Casselman, Mr. J. C. Norris, M.A., B.Paed., was appointed Acting Principal and Mr. W. J. Neale, B.A., was added to the staff.

To the staff of the Ottawa Normal School were added Mr. Henry Bowers, B.A., B.Paed., and Mr. O. E. Ault, B.A., B.Paed.

To the staff of the Stratford Normal School was added Mr. E. A. Miller, B.Sc.A.

To the staff of the Hamilton Normal School was added Mr. J. A. Partridge, B.A.

To the staff of the Peterborough Normal School was added Mr. J. O. McIntyre, B.A.

Mrs. Vera S. Fuller was appointed an Assistant on the staff of the Toronto Normal Model School.

Mr. E. Oakes, B.A., was appointed Principal of the Ottawa Normal Model School and Mr. C. E. Timanus and Mr. H. C. Redfern were added to the staff.

DUNCAN WALKER,
Director of Professional Training.

APPENDIX F

REPORT OF THE PRINCIPAL OF THE ONTARIO TRAINING COLLEGE FOR TECHNICAL TEACHERS

Attendance

The enrolment of teachers-in-training continues to increase, as shown by the following table:

Year	Enrolment
1925	183
1926	204
1927	239
1928	270
1929	276
1930	371

The number of applicants for the regular course for a vocational certificate, entering for the first time, remains at a fairly uniform figure. The continued increase in attendance is due largely to increased summer school attendance, and this in turn is due (*a*) to the offering of new courses, and (*b*) to the continued interest of our graduates in the activities of the Training College, which leads many of them to return year after year to take a summer course. Some of those who enrolled in the first year, 1925, have attended every summer session since, taking one or other of the special courses offered. This is a tribute not only to the interest of these teachers in better fitting themselves for their work, but also to the holding power of the courses offered by the College.

The steady growth of the technical schools of the Province accounts for the continued absorption of vocational teachers. The opening of new manual training centres has provided openings for all the new manual training teachers.

As pointed out in my last report the possibility of the supply of vocational teachers and of manual training teachers overtaking the demand is becoming a probability. If such a situation arises the desirability of requiring a higher standard for admission, or a longer period of training, should be considered.

Summer Sessions

Part of the required courses for the ordinary vocational certificates is given in summer sessions.

In addition to these a number of special or improvement courses are offered for teachers already in service. The more important of these and the enrolment is shown in the following table:

Course	Enrolment
Specialist Vocational Certificates	63
Sewing and Dressmaking Certificates	33
Elementary Household Science Certificates	54
Elementary Manual Training Certificates	28
Specialist Manual Training Certificates	26
Vocational Guidance Certificates	25

Extension Classes

Extension classes in methods of teaching were carried on in the Windsor-Walkerville Technical School during the winter term of 1930. These classes were held on Thursday and Friday evenings of each week. This arrangement was necessary as it was not possible to get together the whole group on one evening.

The class was intended primarily for evening class teachers who had had no instruction in methods of teaching. The number of such teachers in the Windsor-Walkerville School proved to be relatively small. A considerable number of trained and certificated teachers, mostly old students of the Training College, attended the course. The special condition created by a mixed class of this nature caused some modification of the course.

The work consisted of talks on methods of teaching, and practice teaching by the untrained members of the class. Multigraphed outlines of the course were given the students.

The enrolment of teachers who attended more than one night was thirty-five, and the average attendance each night 13.6.

It would appear from the situation in Windsor that, at any rate in the larger schools, the proportion of untained teachers in evening class work is decreasing.

Extension Letters

Circular letters on some special phase of teaching of interest to evening class teachers are sent out from time to time. These were originally planned to meet the needs of untrained evening class teachers who had taken an extension course. Requests from Principals for an additional supply of these letters, to be distributed to all teachers, have brought the circulation up to 700 copies of each letter.

Specialist Vocational Certificate

The courses for the Specialist Vocational Certificate continue to interest vocational teachers. Sixty-two teachers were enrolled in the summer session of 1930 in the various subjects required for this certificate.

The study of the place of new-type tests in shop work was not the least interesting part of the work. Each candidate was required to prepare a set of new-type tests and try them out on his classes before submitting them for approval. It is hoped in time to make use of these contributions in the preparation of a battery of tests for the several shop subjects that may be useful as standard tests.

Tests for trade skill and knowledge were given for the first time in 1930 in the following subjects—motor mechanics, carpentry, electrical installation, machine shop practice, mechanical draughting, and millinery.

Twenty candidates have completed all of the courses of study required and passed satisfactorily the trade tests, and have been granted certificates.

Vocational Guidance

For some years past *The Vocational Education Act* has given power to Advisory Vocational Committees to appoint duly qualified officers to collect and distribute information regarding available occupations and employments, and to offer such counsel to pupils, as will enable them to plan intelligently for their vocational and educational advancement.

Vocational schools have a special interest in the problem of vocational guidance. Teachers of practical subjects have a favourable opportunity for discovering the presence, or what is equally important the absence, of special abilities. To enable these teachers to make the best use of this opportunity, the Training College gives instruction in the principles of vocational guidance to all vocational teachers. This has been done since the establishment of the College in 1925.

A more advanced and specialized course in vocational and educational guidance, leading to a certificate, has been planned and was offered for the first time in the summer session of 1930. The course is designed to meet the needs of teachers in any type of school and is open to teachers with High School Assistants' Certificates, First Class Public School Certificates, or Vocational Certificates, and five years' successful experience in teaching. The latter requirement is set up as it is felt that only persons who have had some experience in teaching youth are in a position to discover and evaluate special abilities, and to offer wise counsel in so important a matter as the selection of a life career.

Part I of the course was given in 1930. The class was made up of twenty-five teachers, with representation from High Schools, Public Schools, and Vocational Schools. Part II of the course will be given in the summer session of 1931.

Some of the schools of the Province have already made a beginning in this important work, by designating one or more members of the staff to give special attention to the matter of guidance and direction. The preparation of a number of teachers in the principles and practice of vocational and educational guidance will enable a larger number of schools to establish guidance facilities.

It should not be overlooked however, that guidance, either vocational or educational, is no new thing in the schools. Good teachers interested in the welfare of their pupils have always done more or less of this work, The special course will simply enlarge their viewpoint and enable them to do it more satisfactorily.

Manual Training Specialist Certificate

The new arrangement of the course for the Manual Training Specialist Certificate, whereby the length of time provided to cover the course was extended from two summer sessions to three went into effect in 1930. The greater length of time required had no deterring effect on the number of applicants registering for the course.

Twenty-six teachers with Ordinary Certificates enrolled in the group, taking Part I in 1930. Parts II and III will be given in the ensuing summer sessions.

Enrolment

The enrolment in Ontario Training College for 1930 was as follows:

A. Resident Courses	Men	Women	Total
1. Ordinary Vocational:			
(a) Spring Session	31	3	34
(b) Summer Session	90	14	104
(c) Autumn Session	16	1	17
2. Special Course "A"	...	4	4
3. Ordinary Manual Training:			
(a) Spring Session	13	1	14
(b) Autumn Session	6	...	6
4. Summer Courses (other class, 1 (b)	142	101	243
Totals	298	124	422
5. Duplications	45	6	51
6. Totals, individuals	253	118	371

B. Extension Courses	
1. Windsor-Walkerville	35

F. P. Gavin,
Principal.

Extensions

A. The above table of statistics does not take into account the following classes established during the latter part of 1930:

(1) *Special Industrial Classes:*

In Toronto the Boys' School was enlarged by annexing the Allan School building and the teaching staff increased by three. A second school of this type is being considered by the Advisory Vocational Committee.

In September a Boys' School was opened in the former Caroline Street Collegiate building, Hamilton. By the New Year the initial enrolment of 60 had increased to 194 and the initial staff of 4 to 10. The establishment of a Girls' School in the near future is contemplated by the Advisory Vocational Committee.

(2) *Promotion Classes:*

Auxiliary Class work in Kitchener has been well rounded out by the establishment of two promotion classes, one for boys and one for girls. The mixed training classes previously in operation have been reorganized as junior training classes.

The Hamilton Separate School Board instituted a promotion class for girls and the East Windsor Separate School Board a mixed senior class.

(3) *Training Classes:*

Brantford 1, Fort William 1, Hamilton 1, Niagara Falls 1, Sarnia 1, Toronto 6, Weston 1, York County 3, East Windsor S.S. 1, Hamilton S.S. 2, Port Arthur S.S. 1.

(4) *Sight Saving:*

Ottawa 1, Toronto 1.

(5) *Orthopedic:*

Toronto 1.

(6) *Hospital, Visiting Teacher:*

Kitchener (Freeport Sanatorium) 1, Toronto 1.

(7) Three classes for deaf children in Toronto were recognized as Auxiliary Classes.

B. Auxiliary Class work has been organized in 25 of the 27 cities of Ontario (including the urban area of York County, in 12 of the 21 towns having a school population of more than 1,000 and in four towns or villages having a school population of less than 1,000. Surveys have been recently conducted in one of the two remaining cities, and in four of the nine remaining towns having a school population of 1,000. Very satisfactory progress has been made among urban centres in the institution of special facilities for the training of exceptional children.

Regulations passed in May, 1930, extend these advantages to smaller centres and rural communities by making provision for the establishment of:

(1) Partial Classes in centres where not more than 12 nor fewer than four pupils of an Auxiliary Class type can be selected. (Several surveys are now under way in connection with the establishment of this type of class.)
(2) Rural School Classes in rural ungraded or semi-graded schools where from one to three pupils of an Auxiliary Class type can be selected.
(3) Visiting Teacher Units in school areas of less than 10,000 population for the education of crippled children who cannot attend school.

It is believed that provision has now been made for training all children within the boundaries of the Province who are educable in the sense that they can profit by public school instruction.

Teacher Training

All teachers of Auxiliary Classes are specially trained in a five-weeks' Summer Course. The minimum qualifications of applicants are: (1) Normal

School graduation; (2) three years' teaching experience; (3) a certificate from their Inspector of special aptitude for the work.

Courses are provided for teachers in: (1) Training, promotion, partial, and special industrial classes; (2) sight-saving classes; (3) lip-reading, hard-of-hearing and speech-correction classes; (4) orthopedic, hospital, and sanatorium classes.

Courses one and four were given in the Summer School of 1930. Seventy-five teachers took course one, and twenty-four course four. Of the ninety-nine attendants four were from the Province of Quebec and two from the Province of New Brunswick. It is expected that in addition to course one, course three for teachers in lip-reading, hard-of-hearing and speech-correction classes will be given in 1931. Grade teachers may take advantage of the latter course, to equip themselves for dealing with the problem of speech difficulties in ordinary classes.

Brief courses are being given in the Normal Schools of the Province to acquaint teachers-in-training with methods of dealing with auxiliary type pupils in rural schools.

The Auxiliary Class teachers throughout the Province have been organized into eight associations. The monthly or bi-monthly meetings of these groups are well attended and the teachers are stimulated by (1) discussion of problems, (2) exhibition of craft work, (3) study of new methods. Valuable assistance is rendered by the annual O.E.A. meeting and the Auxiliary Class Teachers' Bulletin.

The Establishment of Classes

In Ontario the establishment of Auxiliary Classes is a matter within the autonomy of local school boards. Advisory assistance, free surveys and grants equivalent to one-half the excess cost of education are provided by the Government. The placement of exceptional children is an affair which requires delicate handling. It is felt that a policy which aims at securing the good will and voluntary co-operation of a community through explaining to the representatives of the public the need of special training for this type of child is productive of more beneficial and permanent results than measures of compulsion. The rapid extension of the work and the fact that only one Auxiliary Class has ever been discontinued is proof of the wisdom of such a policy.

(1) *Physically Handicapped Children*

A happy state of co-operation exists between the Department of Health and the Department of Education in dealing with this type of child. A tacit understanding exists that when the dominant coefficient in a situation is remedial, as, for example, the case of a tubercular child, the medical department assumes responsibility for the care of the patient, hospitalization, clinics, etc., but where therapeutic conditions are static and the chief factor involved is the provision of a training for citizenship the responsibility is assumed by the educational department, the non-responsible department in either case co-operating under advice of the responsible department.

Upon application by the superintendent in charge, classes may be established in hospitals and sanataria for sick children by the local school board with the approval of the Inspector of Auxiliary Classes.

Upon receipt from a school board of a request to survey a new area for the purpose of establishing an orthopedic, sight-saving, deaf, hard-of-hearing, open air, forest school or visiting teacher class the Director, Division of Child Hygiene, is asked to give a preliminary screening for the purpose of selecting probable eligibles. The children selected are then examined by a specialist. His report is considered by the local Auxiliary Class Board who with the approval of the Inspector of Auxiliary Classes select a sufficient number of candidates to form a class.

A visiting teacher unit (Reg. X, (1) (*f*) may be established upon receipt from a school board of a formal application for the same and a certificate from the Director, Division of Child Hygiene, as to the crippled condition of the child.

(2) *Direct Learners*

In case of children requiring the educational facilities afforded by training, promotion, partial or special industrial classes the application of such terms as subnormal, mental defective, etc., are reminiscent of an age of educational fanaticism and pedantic snobbery. A rapidly growing knowledge and a rapidly widening tolerance compel the recognition of many factors and various standards in education. The low scores obtained by these pupils on a Binet Simon examination have a negative and confirmatory significance only. They tell us that these children cannot indirectly through the study of book symbols and the apprehension of theory readily learn to control behaviour. Such children are essentially *direct learners* acquiring control of behaviour through direct contacts with experience. It is hoped that *direct learners* instead of an offensive terminology will be generally employed to designate pupils of this type.

Upon receipt from a school board of a request to survey an area for the purpose of establishing a training, promotion, partial or special industrial class the Department supplies the teachers and school nurses of that centre with record forms and instructs them as to their use. Children retarded two years or more in the upper forms or one and one-half years or more in the lower forms, children who have repeated grades and children whose profiles of achievement are highly irregular are selected for sympathetic study. The teacher then reports on each pupil's educational history, class standing and school characteristics; the nurse and a representative from the Division of Child Hygiene on his medical history, health conditions, home environment and heredity. A trained psychometrist then gives the child a Stanford Binet examination. All three reports are confidentially considered by the local Auxiliary Class Board who with the approval of the Inspector of Auxiliary Classes select a sufficient number of candidates to constitute a class.

(3) A Rural School Class for a child or children of the sight-saving or direct learning type may be established with the approval of the Inspector of Auxiliary Classes upon receipt of a formal request from a school board, a report made out by the teacher and where possible the school nurse upon a regulation form supplied by the Department, accompanied in case of sight-saving children by a certificate from the Director, Division of Child Hygiene, or in case of direct learning children the record of a Stanford Binet examination conducted by the local Inspector or other trained psychometrist.

(4) When a class has been established in any centre, its continuance and the organization of other classes are left in the hands of the local school authorities subject to the approval of the Inspector of Auxiliary Classes.

Conduction of Classes

Since Auxiliary Class pupils have been segregated from the grades because of their inability to make progress under ordinary school conditions, modifications in class organization, methods of teaching and subject matter of instruction become necessary.

(1) In classes made up of physically handicapped children, who later may pursue a collegiate or university education, the ordinary Public School courses are followed. School-room organization and methods of instruction are adapted to the special needs of the pupil and the conservation of his health—pupils are transported to and from orthopedic classes in vans. Special school-room equipment is provided for their conveyal and physical well being. Training exercises in muscular co-ordination form an important part of the daily programme. Sight-saving classes are accommodated in specially lighted rooms and equipped with large-type readers, neutral tinted paper and other sight-saving material. Deaf and hard-of-hearing classes are trained to receive instruction through the medium of lip-reading. Hospital and sanatorium classes are provided with equipment and devices for bedside study.

(2) In training, promotion, partial and special industrial classes for children of the direct learning type the following modifications of usual school-room procedure are followed:

(*i*) Since these pupils will not proceed to High School Entrance, the horizontal system of classification and promotion by grades has been superseded by a vertical system of classification and promotion by subjects whereby the pupil's progress is kept at a maximum, his special aptitudes advantageously developed and his special weaknesses given adequate attention. A necessary concomitant has been the organization of classes into subject groups rather than grades and the introduction of monthly in place of annual promotions. Individual record forms have this year been supplied the teachers to assist in such organization, and individual monthly report cards to inform parents as to their children's progress.

It has been found impracticable to classify direct learning pupils on the basis of intelligence tests. The low scores here obtained have a negative significance in relation to indirect learning but have little or no positive significance in relation to direct learning. Two children having the same I.Q. may vary widely in capacity.

(*ii*) This year a tentative programme of study has been outlined in which certain phases of the grades curricula that require indirect, abstract or symbolic processes of thought or that are merely foundational to collegiate courses and have but little practical application in ordinary life, are either eliminated or replaced by more realistic aspects brought down from senior grades or even from secondary school programmes. Thus simplified processes of estimating interest, trade discount, taxes, etc., have been brought down from the Arithmetic of Grade 8 and substituted for common measure, multiples, cancellation in the Arithmetic of Group 6. Literary composition has been largely superseded by such oral and written exercises as will equip the pupil with ability to apply for a position, conduct a business conversation by telephone, etc. An intensive study of home industrial and social geography has taken the place of an extensive course in world geography. In the four secondary schools established for this type of pupil under the Advisory Vocational Committee of the Toronto and Hamilton Boards of Education courses in drafting, experimental physical science, food chemistry, home economics, etc., are being successfully taught by direct learning methods. In the formation of these curricula mental integration, socialization and the ability to function knowledge have been deemed of greater import than the acquisition of academic information.

(3) Since this pupil learns largely by direct rather than by indirect processes, a fair share of his school time is devoted to craft work whereby he acquires not

only manual skill and vocational training but gains control of behaviour through direct response to actual situations. With these ends in view a course in craft work has been outlined by Miss L. H. DeLaporte, Assistant Inspector of Auxiliary Classes.

(4) Since conduct with these pupils is largely a matter of direct rather than considered response, the development of moral, social and vocational habits and attitudes constitutes an important part of their education. Since verbal methods of instruction and negative forms of training are as little likely to be productive of results in social as in academic or vocational education, it would seem essential that both teacher and pupil conceive social behaviour as a progressive series of accomplishments which may be mastered by means of instruction participation and practice in much the same fashion as arithmetic or woodworking. To this end a positive and explicit rather than a negative and incidental programme of training has been provided embracing a system of classifications and promotions in various phases of social efficiency similar to ordinary classifications and promotions in academic and craft-work subjects. Since positive in contradistinction to negative methods of instruction in social behaviour have been the subject of but little recorded experimentation the course submitted is necessarily highly tentative in character but has already been productive of striking improvements among various classes inspected.

(5) Vocational guidance training and placement are prominent factors in the educational programme of senior pupils.

H. E. Amoss,
Toronto, February 16th, 1931. *Inspector of Auxiliary Classes.*

APPENDIX H

REPORT OF THE INSPECTOR OF AGRICULTURAL CLASSES

Public and Separate Schools

Agricultural education is maintained in Forms III, IV and V of the Public and Separate Schools, as an optional subject where School Boards decide to introduce it under the Regulations of the Department of Education. This type of education is becoming more and more popular from year to year, and the work itself improves in character as Boards and teachers become better acquainted with the purpose and scope of the subject.

To secure qualified teachers has been the most serious difficulty in promoting this branch of education. Teachers may become legally qualified in either of two ways: two summer courses of five weeks each, either at the Ontario Agricultural College or at the Kemptville Agricultural School, *or* a course of four years provided as an optional subject taken in Collegiate Institutes, High and Continuation Schools.

The table given below shows the increase in numbers of schools which meet the requirements of the Regulations and qualify for agricultural grants from year to year:

Year	No. of Schools	Year	No. of Schools	With School Gardens	With Home Gardens
1903	4	1914	264	208	56
1904	7	1915	407	222	185
1905	6	1916	585	324	261
1906	8	1917	989	466	523
1907	2	1918	1,020	588	432
1908	14	1919	1.408	618	790
1909	16	1920	1,648	702	946
1910	17	1921	1,804	690	1,114
1911	33	1922	2,047	796	1,251
1912	101	1923	2,288	843	1,445
1913	159	1924	2,285	831	1,454
		1925	2,509	783	1,726
		1926	2,802	852	1,950
		1927	3,193	981	2,212
		1928	3,595	1,059	2,536
		1929	3,952	1,077	2,875
		1930	4,342	1,308	3,034

Secondary Schools

By secondary schools are meant Collegiate Institutes, High Schools, Continuation Schools and Form V of Public and Separate Schools.

Three schemes are provided for, any of which may be carried on by those schools which decide to do so under the Regulations of the Department of Education as follows:

(1) Optional classes as a four-year course which may lead to Entrance to Normal Schools or to Junior Matriculation. A person who completes the four-year course in Agriculture is entitled to an Elementary Certificate when he completes the Normal School course.

(2) Department of Agriculture under *The High Schools Act*.

(3) Department of Agriculture under *The Vocational Education Act*.

The following schools are maintaining classes under the scheme indicated in (1) above:

Collegiate Institutes—

Barrie, Belleville, Brockville, Cobourg, Cornwall, Fort William, Goderich, Ingersoll, Kitchener, Lindsay, Napanee, Orillia, Perth, Picton, Port Arthur, Renfrew, Runnymede, Scarborough, Smith's Falls, Strathroy, Walkerville, York Memorial.

High Schools—

Amherstburg, Beamsville, Bowmanville, Bracebridge, Brighton, Burlington, Caledonia, Cayuga, Cobalt, Dundas, Dunnville, Elmira, Essex, Fergus, Fort Frances, Haileybury, Iroquois, Kincardine, Kingsville, Leamington, Listowel, Madoc, Midland, Mitchell, Nepean, New Liskeard, Norwich, Oakville, Petrolia, Port Elgin, Port Perry, Ridgetown, Ridgeway, Saltfleet, Shelburne, Smithville, Stamford, Thessalon, Uxbridge, Waterdown, Watford, Welland, Whitby, Williamstown, Winchester.

Continuation Schools—

Agincourt, Belmont, Coldwater, Comber, Drayton, Drumbo, Ilderton, Jarvis, Kinmount, Lobo, Lynden, Lyndhurst, Mindemoya, Minden, Mount Brydges, Mount Pleasant, Pakenham, Princeton, Seeley's Bay, Sparta, Thamesford, Thornbury, Thorndale, Wheatley, Woodville, Wooler.

Public and Separate Schools with Form V—

S.S. No. 7 Biddulph, R.C.S.S.; No. 4, Mornington, R.C.S.S.; No. 3, Mara, Port McNicol Public School, Walkerton Separate School.

The following schools are carrying on under the scheme indicated in (2) above: Drayton, Elmira, Listowel, Mitchell, Port Perry, Wheatley and Whitby.

Under (3) above the following schools are now maintaining classes and qualifying for grants under *The Vocational Education Act:* Beamsville, Renfrew, Ridgetown.

Teacher Training

An Elementary certificate in Agriculture may be obtained by completing two summer sessions of five weeks each, either at the Ontario Agricultural College, Guelph, or at the Kemptville Agricultural School. A teacher who is qualified to teach in any school of the provincial system may be admitted to these summer courses. Such certificate qualifies the individual to teach Agriculture in a Public or Separate School.

An Intermediate certificate may be obtained by completing two summer sessions which are offered at the Ontario Agricultural College, Guelph. A teacher who is qualified to teach Science in a High School may be admitted to this course and the Intermediate certificate qualifies the holder to teach Agriculture in a Public or a High School.

A Specialist certificate in Agriculture may be obtained by those who hold an Intermediate certificate, if they are otherwise qualified, on the completion of a third summer course in Agriculture and a course in Farm Mechanics. A Specialist certificate in Agriculture may also be obtained by the holder of a B.S.A. degree who completes a year's attendance and passes the examinations at the College of Education.

Normal Schools

A course of instruction in Agriculture, including methodology, is given in each of the seven Normal Schools. This course is particularly effective since the teachers are not only well qualified, but enthusiastic and zealous in carrying on the work. Three of the teachers hold Specialist certificates and four, Intermediate certificates in Agriculture.

Candidates for First Class certificates receive practically the same course of instruction in Agriculture as those in training for Second Class certificates. Some changes will be made when the two-year course is well under way.

Comments from Trustees and Others

The following statements taken from the annual reports submitted to the Department of Education, indicate to some extent how the subject is appreciated by those actually concerned.

S.S. No. 12, Williamsburg.

Pupils take more interest in the subject when it relates directly to their own farms. Beautifying the grounds causes the pupils to copy at home.

TRUSTEES.

S.S. No. 7, Winchester.

We were pleased to receive the first prize donated by Chief Inspector Greer and it was the universal opinion that we deserved it. Tourists passing stop and examine and admire our beautiful window boxes. We hope to do greater things in the future as the people of the section seem to be more interested each year.

TRUSTEES.

S.S. No. 11, Woodhouse.

We have examined the school garden and find it in first class shape. It consists of corn, peas, beans, carrots, beets, onions and a score of other things, and they are certainly looking fine.

Thos. Dunbar,
L. Belbeck, } Trustees.
Thos. Reynolds

S.S. No. 1, Smith.

The teacher and children take a real interest in their school garden.

Trustee.

S.S. No. 11, Smith.

We have a splendid school garden and a lovely bed of flowers, full length of the south side of the school. Also a beautiful flower-box in each window, and a couple of other beds all of which are well kept and with lawn mowed through the season, adds a great deal to the school.

Trustees.

Arkona Public School.

It affords the writer extreme pleasure to pass comment on the Agricultural work carried on at the school. The grass is cut when needed, shrubbery being planted. The tulip bed is still the talk and admiration of the town. This bed is now planted with a variety of flowers taken from the hot bed.

The grounds now have the neatness and attractiveness of a city park.

We, as Trustees, feel justly proud of the interest taken by our staff.

John Brown, Chairman.

Fort Frances Public School.

I may say the work is most worthy of commendation and the garden, both vegetables and flowers, is excellent. Much time has been spent by the pupils in their little gardens, and arrangements are made with the janitor for the care of the garden during vacation.

C. F. Ewers, I.P.S.

J. B. Dandeno,
Toronto, January 2nd, 1931. *Inspector of Agricultural Classes.*

APPENDIX I

REPORT OF THE INSPECTOR OF MANUAL TRAINING AND HOUSEHOLD SCIENCE

Manual Training Centres

Manual Training to the number of 130 centres is now established in the following towns and cities to the extent shown: Brantford 2, Bridgeburg 1, Chatham 1, Collingwood 1, Fairbank 1, Guelph 1, Hamilton 15, Ingersoll 1, Kingston 1, Kitchener 2, London 9, North Bay 1, Orangeville 1, Ottawa 16, Owen Sound 2, Pembroke 1, Peterborough 3, Port Perry 1, St. Catharines 1, Sarnia 3, Stratford 3, Toronto 49, Walkerville 3, Waterloo 1, Windsor 8, Whitby 1, Woodstock 1.

Household Science Centres

Household Science to the number of 129 centres is now carried on in the following towns and cities to the extent shown: Brantford 2, Bridgeburg 1, Brockville 1, Chatham 2, Cobourg 1, Collingwood 1, Fairbank 1, Guelph 2, Hamilton 16, Ingersoll 1, Kingston 1, Kitchener 2, London 10, New Liskeard 1, North Bay 1, Ottawa 8, Owen Sound 2, Peterborough 3, Port Perry 1, St. Catharines 1, Sarnia 3, Stratford 3, Toronto 50, Walkerville, 3, Windsor 8, Woodstock 1, Waterloo 1.

General Situation

Since the date of my last report Manual Training and Household Science have been discontinued in the Collegiate Institutes of Brantford and Chatham and the High Schools of Sudbury and Weston, and the equipment absorbed into that of the Technical Schools of those places. The following additional centres have been opened during the year: Swansea Public School; King George School, Walkerville; Hugh Beaton School, Walkerville; Cameron School, Windsor; Central School, Hamilton; Westdale Collegiate Institute, Hamilton; Brockville Collegiate Institute; Dovercourt Public School, John Fisher Public School, John Ross Robertson Public School, Duke of York Public School, Brock Avenue Public School, Toronto, making a total of twelve.

The character of the accommodations provided in these new centres is generally much in advance of those previously established. The equipment is being standardized, all essentials are being included and the non-essentials are being rigorously excluded.

While this shows a gratifying increase, it will be noted that the growth is mainly in large towns and cities. The desirability of making some provision for manual arts instruction in the smaller towns and rural districts is becoming somewhat urgent.

In extending the work to these smaller communities the following considerations seem involved:

(1) The provision of adequate grants. The present grants for Manual Training and Household Science were established many years ago. Since that time the cost of buildings, accommodations and equipment has materially increased and the grants, which at the time of establishment were entirely adequate, have become quite insufficient and are not proving sufficiently attrac-

tive to induce Boards to consider the introduction of these subjects from a financial point of view.

(2) Grouping of Centres. It should not be difficult to form a group of three or four towns within easy reach of each other, each having its own Manual Training and Household Science centres and equipments and each paying its share of the special teachers' salaries, according to the time spent in each place by the teacher. The Government grants would materially aid in providing the equipment in each of these centres. Now that radial and bus lines are being extended rapidly throughout the Province, little difficulty would be experienced by the teachers in getting from place to place. This plan has been proposed in one or two localities, but it has not yet been possible to get concerted co-operative action between three or four different educational authorities, largely owing to conflicting interests which are often more imaginary than real.

(3) The provision of teachers with a double qualification. The small High School cannot provide sufficient pupils to employ the whole time of a Manual Training teacher or a Household Science teacher. If a small group of teachers could be qualified for teaching the academic subjects of the High School curriculum in addition to Manual Training or Household Science, the introduction of these subjects would be much easier and the whole time of the teachers could be occupied. The lack of such doubly qualified teachers has been felt in many schools and permits for teaching Household Science have had to be granted to teachers in Port Perry, New Liskeard and Mitchell.

(4) The revision of the High School Course of Study in Manual Training. There now appears a desire and need for additional activities and the inclusion of new materials. This desire is prompted by three factors:

> (*a*) Formal Woodworking has become somewhat commonplace and its newness and attractiveness has to some extent worn off, particularly in classes taught by teachers lacking vision and initiative in devising new projects.
>
> (*b*) Industrial conditions have changed and have relegated wood and wood-working to a less important position.
>
> (*c*) The interest of the boy affected by these factors demands a much broader scope of activity.
>
> (*d*) The recognition of the need for exploratory opportunities touching a wider range of mechanical work and a more extended use of the newer materials.

Home mechanics and the activities of the home and farm afford a basis for much new matter and many new activities that might well be introduced into Manual Training courses, provided conditions were favourable.

The following is a list of problems amongst many others that might well be included in a Manual Training course for boys of a High School age: Making some concrete, repairing furniture, tinning a soldering iron, soldering, repairing a mortise lock, glazing a sash, repairing a leaking tap, cleaning a drain trap, wiring a bell, hanging a door, reading a water, gas or electric meter, repairing a hole in a plastered wall, making window screens, painting, reseating a cane-bottom chair, making a sugar scoop from a tin can, filing a key for a mortise or Yale lock, sharpening and adjusting a lawn mower, cutting and threading a piece of pipe, making an electric magnet, repairing an electric iron.

(5) Provision of more time for the work. It is to be regretted that the time available for the work in Manual Training and Household Science is so limited. Two hours each in a few cases, but in the majority only one and a half hours is

all that is available. In addition to the subjects enumerated above, there are so many things that should be taught in connection with the subject, but there is not time available. One of the weak points of instruction in handwork, whether it be given in the class-room or the handicraft room, is its severance from life and traditions. The pupils learn to do things but they do not learn how their craft is connected with the craft that built our houses, constructed our furniture and made our clothes, nor do they learn anything about the tradition of great names and great achievements that lie behind it. The fact is that every craft has in the course of time acquired a "culture" of its own, and owing to its development through the ages has come to be what it is to-day.

(6) The provision of a new type of equipment. In order to carry on work of an extended nature such as above referred to, some changes in the traditional equipment will have to be made. The kind of equipment will be that known as the general shop, now being largely adopted in the Junior High Schools of the United States. Here provision is made for woodwork, sheet-metal work, plumbing, electricity, forging, auto mechanics, machine shop and draughting. The organization of the work will, of course, be somewhat different. Instead of all the class being engaged in one occupation at the same time, the classes will be divided into groups, each group engaged in a different activity under the control of one teacher.

(7) Co-operation between the manual arts and industrial education. An arrangement should be made so the shop may be used both for ordinary High School pupils and pupils taking a Vocational course. In the small High School the equipment needed will be practically the same and in order that the teacher may be fully employed and the shop and equipment continuously used, pupils of both departments should be allowed to use the facilities provided.

The growth of home work through the influence of sympathetic teachers has made remarkable progress. Many home workshops are being fitted up and the practice of giving boys serviceable tools for Christmas presents is becoming more general. This brings the work closer to the home and reacts favourably all round. Many household repairs and operations are now being performed by the boys, such as hanging screen doors, fitting storm windows, fixing shades, repairing broken windows, locks, tables, etc., putting new washers in leaking taps, connecting up electric bells, irons, lights, and adjusting shades, etc. Some schools have drawn up a list of more than a hundred minor operations round the home which any intelligent boy or girl ought to be able to perform.

In one school the boys were engaged in the repair of damaged toys, a large number of which were sent in by a manufacturer. These consisted of trains, automobiles, wagons, horses, animals, games of all kinds and moving mechanical figures. The majority of these were made into really serviceable toys and were sent to the Sick Children's Hospital and other institutions. This work has both ethical and educational values and the amount of ingenuity and resource displayed by the boys, and the thought involved, plays a large part in the development of character and those qualities which contribute to a successful life.

The aid now being given to Manual Training Instructors by various manufacturers of lumber, finishes, tools, etc., has grown to a remarkable degree. Charts, working drawings, processes of tool manufacture, blue prints, books of instruction, etc., are available for the use of both pupils and teachers for the asking and the teachers generally are making the fullest use of them.

Another feature of the work which is receiving more attention is the reading and understanding of technical or semi-technical literature. In some schools, subscriptions are taken at a reduced rate for "Popular Mechanics," "Woodworker," radio magazines, and various other publications dealing with construction, tools, timber, etc., and the aid of the teachers is being constantly sought in making of various objects outlined in these publications. The boys are encouraged to keep scrap books in which are kept various interesting articles and illustrations culled from newspapers, magazines, etc., dealing with constructive problems, and the collections made by some of the boys are exceedingly useful and informative.

Character of the Work in Household Science

The Household Science work done in the Public Schools falls naturally into two divisions, first that done in the class-room by the grade teacher and second that done in the Household Science room by teachers who in addition to the Second Class Certificate hold a Household Science Certificate obtained after one year's attendance at the College of Education or two years' attendance at the Macdonald Institute, Guelph.

In the larger towns and cities such as Toronto, Ottawa and Hamilton, the work in the lower grades is thoroughly well organized and taught. A definite stated time is provided on the time table and the course is well graded. In these places the work is well supervised and the teachers of the grade classes receive instruction as to the kind of work and methods of instruction. In the smaller places the work is not so well organized and the work is left largely to the initiative of the individual teachers, but a large amount of good practical work is being done.

The Household Science rooms in the centres previously enumerated are well equipped and very practical instruction is being given. Every effort is made to encourage home practice and the pupils in a large number of cases bring their home problems to the teacher of Household Science for solution. The parents, too, are making greater use of these classes by seeking the advice of the Household Science teacher. Many schools have instituted a parents' day each term when the parents are invited to visit the classes and see their children at work. On these occasions refreshments prepared by the children are served and in this way the interest and co-operation of the home is secured. The practice is growing of cooking in larger quantities instead of using the small amounts that were previously the practice. The family meal is being made the basis of instruction and in this way more direct contact is made with the home. Many teachers require the pupils to give a short account of the work they have done in the home during the previous week and it is surprising to hear the amount of help they have been able to render their mothers. Attention is being paid to the right kind of food, health and weight, and many pupils have received considerable benefit in this connection. Attention is being given not only to cookery in these classes but also to sanitation, general care of the home, decoration, manners, the right kind of dress and the ability to perform many mechanical operations that are necessary in the daily routine of housekeeping.

When it is remembered that at the most, two hours a week, and in the majority of cases only one and a half hours are given to this work, the progress being made is very gratifying. The work being done in the High Schools is, as would be expected, of a more advanced and practical character, particularly in those cases where there is a well-graded course in the Public Schools.

Pupils in the First and Second Forms are receiving instruction and being taught to assume responsibility in the management of a home which they will find of great service.

Rural Schools

During the past two years Manual Training and Household Science have made considerable progress in rural schools and those urban schools that are unable to avail themselves of the provisions of the general regulations.

The best method of approach to Household Science in the rural school is through the medium of the hot noon-day lunch or the preparation of one or two hot dishes to supplement the lunch brought from home. Owing to the fact that many pupils live far from the school, it is impossible for them to go home for the mid-day meal, and they are thus dependent upon lunches which they bring with them. Very frequently the pupils are allowed to eat their lunches where and how they please, and the method chosen is conducive neither to comfort nor health. In fine weather they do not wish to lose any time from their games, and so they eat their food while playing, or they bolt it in order that they may get to their play more quickly. In severe weather they crowd around the steps or the stove and do not hesitate to scatter crumbs and crusts. In one case even a teacher has been seen holding a sandwich in one hand and writing on the blackboard with the other. There are now over 1,200 schools serving at least one hot dish at the noon lunch, and the almost unanimous experience of the teachers in these schools is that the health of the children is improved, that they are able to do better work in the afternoon and that their attendance is more regular. One outstanding advantage is that the pupils are under proper supervision during the noon hour and moral and physical injury is prevented.

As has been previously pointed out, the extent and character of this work depends very largely upon the interest taken by the Public and Separate School Inspectors. The number of classes in various outstanding inspectorates are shown as follows: Bruce East 33, Bruce West 31, Carleton East 25, Dufferin 29, Dundas 30, Glengarry 28, Grey South 29, Grey West 27, Lanark 26, Leeds and Grevnille (2) 47, Lincoln 60, Muskoka 22, Nipissing 22, Northumberland and Durham (3) 32, Peel 27, Renfrew South 47, Wellington South 55, Wentworth 67, York (3) 22.

There is a total of 1,267 Rural Public Schools including 1,507 classes teaching Household Science and 1,202 of these are serving a hot dish at the noon lunch. Fifty-two Separate Rural Schools with 82 classes are teaching the subject and 47 are serving a hot dish at the noon lunch.

There are 113 rural schools with 241 classes being taught Manual Training and 64 of these classes are in Wentworth County.

Training of Teachers

The plans now in operation for the training of teachers in Manual Training and Household Science are working very satisfactorily. The certificates issued in each subject are of three grades: (1) Elementary, (2) Ordinary, (3) Specialist. The term "Ordinary" as applied to these certificates has been in use for many years but owing to its implications it is not at all satisfactory. It might well be changed to "Intermediate."

The Elementary Certificate is obtained by attendance at two Summer Schools each continuing for five weeks. These courses are now given at the Industrial Training College, Hamilton, and have up to the present been well attended. Summer Courses were also held in Ottawa.

In order to give opportunity to rural school teachers to obtain the Elementary Certificate during the school year, Saturday classes have been held at Hamilton Normal School. These classes have been held for several years and the present classes have a large attendance. All the teachers attending these courses are actually in service in the rural schools of the Province and the work taken deals entirely with the requirements and possibilities of the rural schools with reference to Manual Training and Household Science and the serving of a hot dish to supplement the lunch brought from home. The students almost invariably do good work and leave with the expressed intention of introducing the subject, if at all possible, into their schools the following year.

Early in the present school year a request came in from a number of Public School teachers in the City of Toronto and in rural schools surrounding the city for the establishment of similar classes in Toronto. As a result, five classes in Manual Training and two in Household Science were commenced on Saturday, November 15th, and will continue for twenty-five Saturdays. One hundred and sixty teachers are now attending these classes from 8.00 a.m. till 1.00 p.m. each day.

The Elementary Certificate obtained by attendance at these Summer and Saturday Courses qualifies the holder to teach the subject in rural schools and those urban schools which are unable to comply with the provisions of the General Regulations, but it enables the holder to enter the one-year course qualifying for the Ordinary Certificate in January instead of the previous October, thus saving time and expense. A growing number of teachers are availing themselves of this opportunity. The Ordinary Certificate in Manual Training is obtained by taking a one-year course at the Industrial Training College and that in Household Science at the College of Education, or by a two-year course at the Macdonald Institute, Guelph.

The Specialist Certificate is obtained by attendance for three years at the Summer Courses held at the Industrial Training College, Hamilton. These courses which are given for five weeks are open only to the holders of the Ordinary Certificate. They continue for eight hours each day. The results of the extra training these teachers receive is shown in the improvement of the instruction being given in the schools and School Boards are showing recognition of this additional qualification by giving increases in salary.

The Specialist Certificate in Household Science is obtained through a four-year course at the University of Toronto.

A. H. Leake,
Inspector of Manual Training and Household Science.

Toronto, December, 1930.

APPENDIX J

REPORT OF THE PROVINCIAL SCHOOL ATTENDANCE OFFICER

Education is the bedrock upon which not only individual character and success but national progress and national security rest. Personal experience has brought the former fact home to the common mind, and under pressure of modern competition the larger truth is being ever more forcibly impressed. In the light of the fact that public institutions are largely based upon and administered under the popular will, that will must function at its best, if the strength of the nation is not to be wasted on a fruitless struggle of faction with faction and mass with class, and mediocrity or possible failure be the national lot.

The key to intelligent citizenship is the open school door, that is to say, educational opportunity for all. It is with this principle, viz.: the nation-wide distribution of educational values, that supervised attendance is concerned. But it is one thing to admit the principle and quite another to have it realized in practice. Difficulties of various kinds obtrude themselves in the operative phases of the effort. Parental apathy or indulgence, pre-occupation with other interests, poverty, physical and human handicaps, may bar the way. These and kindred causes open the gateway to illiteracy with its natural train of social and economic evils which menace home, society and state. It is just here that organized effort must rise to combat these conditions. This effort has taken practical form in a province-wide system of attendance supervision, supplemented by public health and welfare work each operating in its own sphere but making common contribution to the end of a wholesome, intelligent, law-abiding citizenship.

How effectively the school attendance organization is meeting the challenge is outlined in the following pages:

TABLE I

School Enrolment in Relation to Provincial Population (1929)

		Total Enrolment	Percentage of School Population	Percentage of Provincial Population
Elementary Schools:				
Public	540,558			
Separate	105,518			
		646,076	80.1	20.2
Secondary Schools:				
Collegiate Institute and High Schools	64,964			
Vocational	29,095			
Continuation	10,534			
		104,593	13.0	3.2
Evening and Summer Schools:				
Public	3,369			
High	3,560			
Vocational	44,431			
Summer	4,079			
		55,439	6.9	1.7
		806,108	100.0	25.1

The above table shows that over twenty-five per cent. of the general population of Ontario is enrolled in our provincial schools. The enrolment in the elementary schools has increased by 4,948, that in the secondary schools by 10,920, and in the evening schools by 3,293 in the past year.

A striking feature is the large and increasing enrolment in evening and summer schools, which reveals the readiness of the adult population to improve their education when the opportunity is offered.

School Enrolment in Relation to Maximum Number Living as Shown by Life Tables

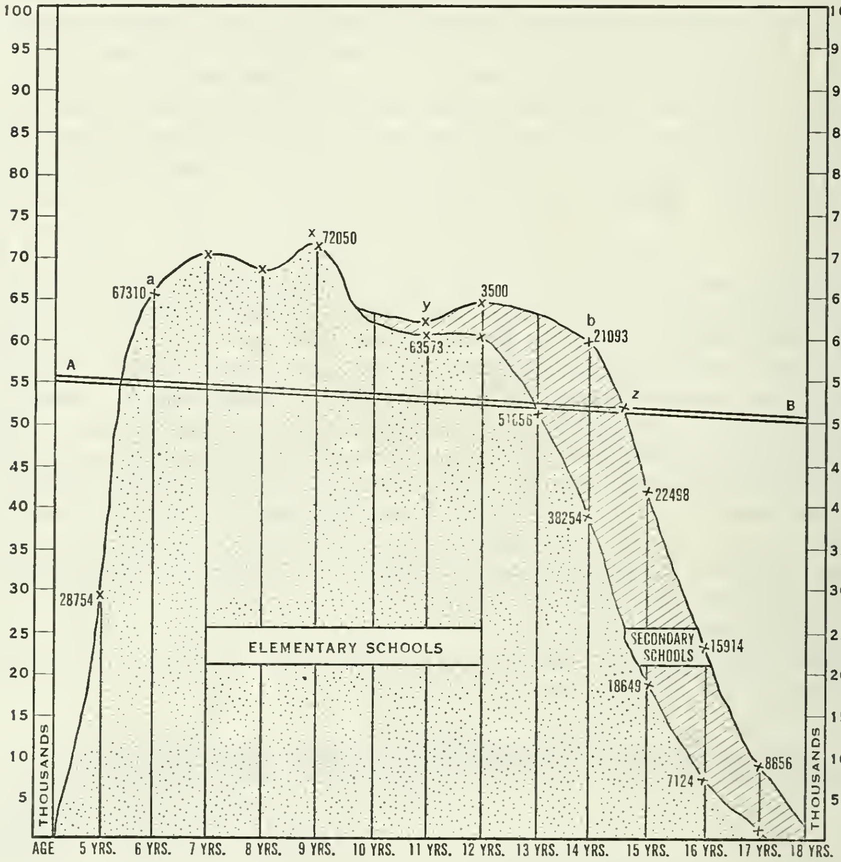

FIGURE 1

Graph of Total School Enrolment, All Schools, According to Age, 1929
Dotted columns—Elementary Schools
Thatched columns—Secondary Schools
A-B Line showing normal number living at each age according to American Life Tables.

Figure 1 above shows, in the dotted columns, the numbers in the successive ages 5 to 18 enrolled in the Elementary Schools, with the thatched sections superimposed thereon showing the numbers in the Secondary Schools, ages 10 to 18. The line A-B represents the normal numbers living at each age according to indexes derived from American Life Tables plotted for a population of 3,250,000, which was the approximate population for Ontario in 1929.

Interesting facts emerge from a close analysis of this figure:

(1) The visible rise of the curve of school enrolment over the line A-B, marking the normal number expected to be living at each age, is accounted for in part by the lower mortality rate in northern as compared with southern latitudes. It shows that Ontario is evidently taking care of its entire body of citizens in the making.

(2) The wave line a-b furnishes an interesting reflection of war times. The point x marks the highest point and y the lowest point of the birth rate, the latter during and the former immediately following the war. By the year 1929 the wave had just reached the stage indicated by the curve of school attendance. The very marked recession in the birth rate during the four years of war and the corresponding increase in the years immediately following are clearly defined.

(3) Only one-half of the children of five years of age enroll in the regular day schools. In large urban schools part of the balance is enrolled in the Kindergarten. Up to the age of 14.8 years of age the full quota of our youth are cared for in our regular schools, as shown at the point z, where the curve of enrolment crosses the maximum number line A-B.

General Conditions of Elementary School Attendance

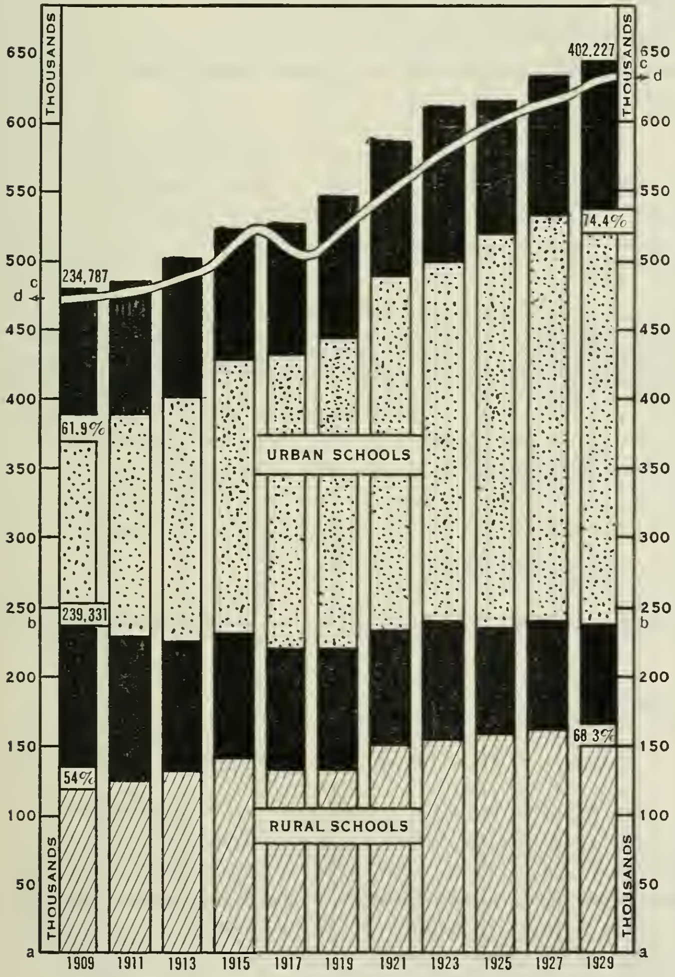

FIGURE 2

SCHOOL ENROLMENT IN RELATION TO AVERAGE ATTENDANCE AND PROVINCIAL POPULATION

a-b—Total enrolment in Rural Elementary Schools, 1909-1929.

b-c—Total enrolment in Urban Elementary Schools, 1909-1929.

c-c—Increase in enrolled attendance of Elementary Schools, 1909-1929.

d-d—Increase in provincial population reduced to a common base with c-c.

The above diagram furnishes a comprehensive study of the movement in the elementary school population, urban and rural, and of its relation to the growth in provincial population in Ontario throughout the past twenty years, 1909–1929.

The thatched sections of the columns indicate the proportion of children receiving an average education, the black sections the proportion that fall below that average in urban and rural schools. In 1929 the standard of attendance efficiency for rural schools was 68.3% as compared with 74.4% in urban municipalities. In twenty years there has been an increase of 14.3% in rural efficiency and of 12.5% in urban. The wave line d-d is plotted to show the rise in general population, reduced for purposes of comparison to the same base with school enrolment. From a detailed study some interesting facts emerge. The general population rose gradually from 1909 to 1915, the school enrolment keeping consistently abreast of the rise. The sudden drop in the former in 1916, 1917 and 1918 is accounted for by the heavy drafts in the adult population to the seat of war, while the school population remained static. It is worthy of notice that the rapid advance in general population from 1919 to 1929 was outdistanced by school enrolment, showing that stricter enforcement of attendance under the new Attendance Act of 1919 was bearing fruit. The full quota of increase in population was cared for and numbers were gathered in that had hitherto escaped the dragnet of attendance supervision.

Standards of Elementary School Attendance

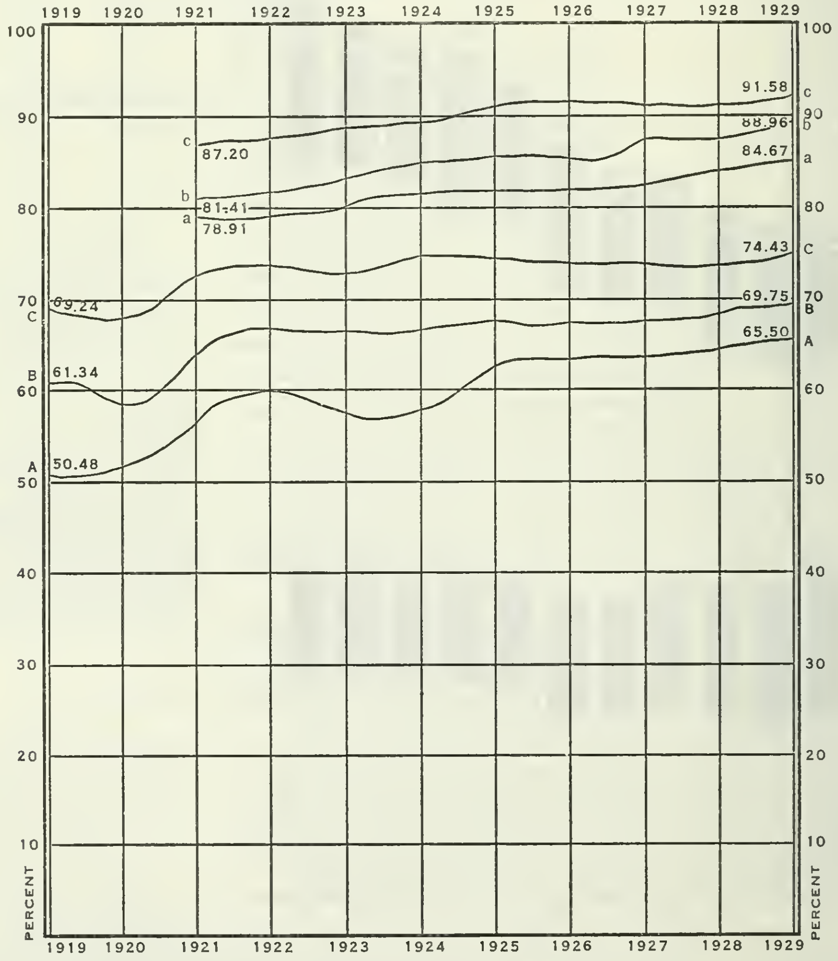

FIGURE 3

Curve of Progress in Attendance—Elementary Schools

A-A—Percentage of average to total enrolment 1919-1929, District Rural Schools.
B-B—Percentage of average to total enrolment 1919-1929, County Rural Schools.
C-C—Percentage of average to total enrolment 1919-1929, All Urban Schools.
a-a, b-b, c-c—Corresponding Percentages based on relation of Actual to Possible Aggregate.

The movement of rural as compared with urban population in this twenty-year period furnishes an interesting study. It will be noted that in 1909 rural and urban school populations were in even balance at about 240,000. From 1909 the rural population steadily declined, with a slight reaction in 1914 and 1915, until the close of the war. It revived slightly after 1919 and closed in 1929 practically on a par with what it had been twenty years before. Meantime the general population had increased by over three-quarters of a million, the urban centres absorbing the entire increase. Thus, while the rural school population has remained at a standstill at about 240,000 for twenty years, the urban school enrolment increased from 234,787 to 402,227 within the same period.

School attendance is the foundation stone of school efficiency. The teacher holds the primary place among the school forces, but the teacher who neglects this basic factor will meet with disappointment, if not failure, in his effort. However skilful the teacher, however complete the equipment, however nicely balanced the programme, his power cannot function beyond the level of the attendance standard. School attendance is the balance wheel in the school machinery. Shifting movement puts the machine out of gear, reduces the output and mars the product.

The above Figure 2 shows a consistent upward movement in attendance efficiency for all grades of elementary schools. Notwithstanding that rural pupils have much greater handicaps to contend with than urban pupils, the attendance standard is only 6.83 below that of urban schools. The financial depression of the past two years has reflected itself in school attendance. There was larger call for home help, especially on the farm where, in many cases, every ounce of producing power was necessary to the maintenance of living conditions. Notwithstanding this fact, a distinct rise in the standard of attendance is registered in every class of school.

TABLE 2

Comparative Statement of Enrolled Adolescents, 1928 and 1929

						Totals	
	Form I	Form II	Form III	Form IV	Form V	1927	1928
Elementary Schools, 1928....	664	2,228	12,572	37,124	3,847	56,435	....
" " 1929....	497	1,865	11,552	38,863	4,116	....	56,893
	1st and 2nd years		3rd and 4th years		5th year		
Secondary Schools, 1928.....	33,189		8,284		197	41,670	....
" " 1929.....	34,353		8,826		216	....	43,395
						98,105	100,288

It will be noted that the general shift of pupils of adolescent age is upward. The year 1929 shows a total decrease of 1,540 in Forms I to III in elementary schools, and an increase of 2,008 in the higher grades. In the secondary schools there was an increase of 1,726, making a net increase of registered adolescents of 2,194 in 1929 over 1928. This is a desirable trend, as too large a proportion were marking time in the elementary grades.

Under enforced school attendance it is conceded that, at times, exceptional conditions will call for special treatment. The permissive clauses of The Adolescent School Attendance Act make ample allowance for this. Proven need of help in the home or through gainful occupation elsewhere is never denied where the condition cannot otherwise be met. A child under the age of fourteen

TABLE 3

Comparative Statement of Employed Adolescents, 1929

	Child Employment (under 14 years)		Adolescent Employment (14 to 16 years of age)					
	Six Weeks' Permits		Home Permits		Employment Certificates		Totals	
	1928	1929	1928	1929	1928	1929	1928	1929
Rural Schools.....	159	1,188	511	302	437	479	948	781
Urban Schools....	82	177	1,026	886	4,207	3,888	5,233	4,774
Totals.......	241	1,365	1,537	1,188	4,644	4,367	6,181	5,555

years, under emergent conditions such as illness in the home, temporary cessation of income, or pressing farm needs, may be released for six weeks. From the above table, in the year 1929 1,365 permits were issued to such children as compared with 241 in 1928. The excess in 1929 is accounted for by the fact that, in order to protect the child from needless loss of schooling, farm help was more fully covered by home permits in 1929 than in 1928. The drop in adolescent totals of 626 in 1929 as compared with 1928 is due mainly to the fact that under economic pressure employers dispensed largely with unskilled labour.

By referring to Tables 2 and 3 above, it will be seen that out of a total of 100,299 pupils of adolescent age, 5,555 were granted school exemption, or 5.5%, as compared with 6,181 or 6.3% in 1928. It speaks well for the good judgment of both parents and attendance officers that so limited a number are released from school under working concessions.

TABLE 4

Part-Time Classes for Adolescents, 1929–1930

	No. of Teachers		Enrolment		Total
	Academic	Vocational	On Home Permits	On Employment Certificates	
Brantford....................	..	5	5	30	35
Galt..........................	1	5	5	131	136
Guelph.......................	1	2	3	122	125
Hamilton.....................	4	5	165	443	608
Kitchener–Waterloo............	4	7	46	123	169
London.......................	2	4	24	64	88
Toronto:					
Vocational.................	11	20	114	690	804
Public.....................	1	..	113	231	344
Grand Totals, 1929.......	24	48	475	1,834	2,309
Grand Totals, 1928.......	18	37	506	1,988	2,494

Out of a total of 5,555 school exemptions, as shown in Table 3, 2,309 pupils are enrolled in part-time classes. The difference is accounted for by the fact that urban centres under 5,000 in population are not required to provide part-time classes. The number of classes has increased by the addition of Brantford, Galt and Guelph to the list. Part-time classes are designed to implement the limited education of pupils who, through conditions outside their control, are thrust into the working world at an immature age. The pupils are distributed among widely varying day occupations as follows:

Trade and Industries	479
Commercial Occupations	272
Labour	150
Factories	206
Errand Messenger Service	123
House Workers	480
Other varied occupations	599
Total	2,309

They gain much from their school connection besides academic instruction. In the teacher they have a sympathetic adviser who gives them direct assistance in their occupational problems, and they are retained under the steadying influence of home and school until their judgment matures and they acquire the habits of self-dependence and self-control so valuable in their relationships in larger life.

TABLE 5

Judicial Enforcement of Attendance

	Complaints made Violation of Attendance Acts	Number of Convictions			Total Convictions
		Re Illegal Employment of Children under 14	Re Illegal Employment of Adolescents	Parental Negligence	
Urban Schools:					
1928	673	6	10	78	94
1929	668	12	151	176	339
Rural Schools:					
1928	67	8	15	2	25
1929	112	32	25	30	87
Total: 1928	740	14	25	80	119
1929	780	44	176	206	426

The number of complaints and convictions shows a noticeable increase in 1929 over 1928. This is in part due to the insistence on more exact recording and, in part, to closer checking of violations of the Attendance Acts. In 1929, out of a total of 780 complaints, 426, or 54.6%, issued in convictions. Frequently in cases of parental negligence judgment is suspended conditional upon promise of improvement. In the larger centres the probation officer is a helpful intermediary between the Court and the home. Out of a total enrolment of 520,666 pupils of compulsory school age, not more than three cases of infringement of the Attendance Acts for every 2,000 pupils had to be referred to the courts for solution, and fewer than one-fourth of these issued in conviction on the count of parental negligence.

The splendid co-operation and support of the Children's Aid Society, Big Brothers, Big Sisters, Neighbourhood Workers, Social and Welfare Workers and Relief Officers are acknowledged. They have readily lent their services in the solution of many difficult problems in home and school adjustments, and thus indirectly have protected the children in their right to an adequate education.

The New Child Accounting System

The ultimate test of any system of attendance supervision is the certainty with which it accounts for every child of school age in the province and brings him within the range of school facilities. It must not only unfailingly detect the non-attender and the casual comer, but it must restore him to his place in school and tend thereby to build up in him the contrary habits of promptness and dependability. This the new plan aims, in a special way, to do. The teacher is the chief accountant. From her vantage ground of access to facts she must hold the key position in the system. Day by day she notes and records the absentees, canvasses reasons for absence and, on the basis of her findings, segregates the unexcused from the lawful absentees and concentrates effort on the former with a view to their restoration to regular attendance. In the task she enlists the co-operation of the school health nurse and the attendance officer in all cases that come rightly under their control. Month by month her card-indexes bear the totals of loss under six standard causes, viz.: Illness, Home Help, Parental Neglect, Physical Obstacles, Truancy, and Privation. Through these collected data the teacher has a clearly defined picture of the local attendance conditions and may measure present attainment by past as a stimulus and guide to further advance. These summarized data for urban and rural schools find their way to provincial progress records and again enable the Department to interpret the general conditions, devise new plans in the light of the facts, and marshal the forces for further improvement. In addition thereto, monthly surveys of inspectoral units give direct contact of the provincial office with the local areas and salutary measures are adopted to secure immediate betterment and to maintain the standard of attendance at the maximum possible.

What was once vague and indefinite knowledge of conditions with equally ineffective and apathetic action on the part of the attendance forces has been changed to clear-cut knowledge and to definite and in most cases conclusive action by the officers. To fully appraise the scheme is a matter of time, but the following results are clearly in evidence:

(1) A fuller appreciation on the part of teachers and inspectors of the value of school attendance as a factor in school efficiency.
(2) A finer co-ordination of attendance forces in the local field.
(3) A speedy stepping up of attendance standards.

Many inspectorates, and in a few cases entire counties, have attained a standard of more than 90% for rural schools for the year 1930. In some cases rural schools are threatening to outclass the urban. This is a very distinct advance on the attendance status for 1929, where the general average was only 74.4%. Inspectors state that the benefit derived in school efficiency has been greater than from any other source and has had a stimulating effect not only on the general progress of the schools but upon the educational spirit of the communities at large.

Caring for the Full Quota

In a province where the range of territory is so wide and the geographical conditions so diversified, regular school facilities will often fail to answer the conditions. Isolated homes and settlements on the frontiers must be cared for by other means. Correspondence Courses and Railway School Cars are reaching out a helping hand to hundreds of these homes and are doing their part, in association with the regular facilities, in laying the foundations of character and wholesome citizenship upon which alone community and national progress must depend.

J. B. MacDougall,
Toronto, December 31st, 1930. *Provincial School Attendance Officer.*

APPENDIX K

REPORT OF THE ACTING INSPECTOR OF PUBLIC LIBRARIES

Since the death of the late Inspector of Public Libraries each member of the staff has accepted gladly any additional duties and carried them through to a successful issue.

At the beginning of 1931 we were again reduced in staff by the resignation of Miss Dorothy Thompson, who has accepted a position with the University of Toronto.

The following is a brief outline of our activities during the year.

Libraries Visited

More libraries have been visited than for many years. Meetings of library boards have been attended. Instruction has been given in the work of classifying and cataloguing. Many small libraries have been aided, and in deserving cases small special grants have been given, and the work in general pertaining to the public libraries of the Province has gained momentum.

Publications

The Ontario Library Review has been published quarterly and is sent to the members of every library board in the Province. It has a growing circulation, and only recently enquiries have been received from South Africa and Australia asking that back numbers of the Review be sent to them. It is a splendid medium for reaching those interested in library work, and the topical papers and news items in it keep even those living in remote sections in touch with the work carried on in the larger centres.

Library Institutes

Two library institutes were held in 1930. The first at Ottawa on October the 16th and 17th, and the other at Walkerville on December the 15th and 16th. For the Ottawa Institute, seventy-three libraries were invited to be represented, and at the Walkerville Institute, one hundred and eighteen libraries were requested to send delegates. The Department paid all necessary railway and hotel accounts for those attending.

These were the first library institutes held in the Province in eight years, and the enthusiasm manifested at both the meetings was so great that it is the intention of the Department to hold others in different sections during the late spring, so that eventually every one of the five hundred and fifteen libraries in the Province will have had a chance to attend the meetings.

The Department realized that Institute meetings were of great benefit to the library workers, and more especially for the smaller and isolated sections where visits were infrequent and where new library ideas and help could be given only through the mail or by personal visits. At the Institute meetings, librarians and library workers are brought together, ideas exchanged, help given, and the librarian who may think her library problems peculiar to her particular community, may very often find others in the district in similar circumstances. Difficulties are solved, and each goes back to her respective station helped and better equipped for what is very often a rather thankless task.

Travelling Libraries

The travelling libraries show an improvement, but are not yet up to what we consider our standard owing to the need of more room. At least twice the space now available is required in order that the work may be performed with better satisfaction to this office and our patrons. There is need also for better facilities for handling the work. A decided improvement is noted in the greater circulation of classed books.

Summary

We have now five hundred and six libraries on our active list as compared with five hundred and twenty-two of a year ago. The apparent decrease is accounted for by the fact that sixteen association libraries that have not reported for a number of years, and that have been kept on the list in the hope that reorganization would take place, have been removed. They are as follows: Assiginack, Beachville, Burnstown, Capreol, Hastings, Hawkesville, Hillview, Londesboro, Luton, Maple, Markstay, North Cobalt, Rainy River, Sonya, Speedside and Wesleyville.

Nine new libraries were organized during 1930. Two of these were branches of free public libraries, and seven were association public libraries. They are as follows: Free libraries—Hamilton, Mountain Branch; Toronto, Runnymede Branch. Association libraries—Bond Head, Callander, Dunvegan, Havelock, Hickson, Maxville, and Wellburn.

Two association public libraries were transferred to the list of free public libraries: Oil Springs and Tobermory.

The circulation of books in the free and association libraries of the Province has increased by 588,474, it being now nearly eleven and a quarter million.

A number of new library buildings were opened during the year, a notable example being the library at Newbury. This building was erected as a memorial to the late William Bayne, by his widow and family, and presented to the Village of Newbury.

The coming year promises even greater activity, as there are several enquiries already regarding plans, prices, etc., of library buildings.

A statement of the statistics of the libraries of the Province follows.

S. B. Herbert,
Acting Inspector of Public Libraries.

Toronto, January 21st, 1931.

APPENDIX L

REPORT OF THE SUPERINTENDENT OF THE ONTARIO SCHOOL FOR THE BLIND

Attendance

The average attendance for the school term ending June, 1930, was 130. At the opening of school in September, 1929, there were 126 pupils enrolled. Eight pupils entered during the session which brought the total up to 134, of which number 74 were boys and 60 were girls. The total registration from October 31, 1929 to October 31st, 1930 was 157—two less than in the preceding year. School opened in September, 1930, with 125 pupils in residence.

In September, 1930, thirty-two of the pupils who were at school during the term did not return. Of these there were 19 boys and 13 girls. They did not return for the following reasons:

12 completed their course.
3 left to continue their studies elsewhere.
5 remained home on account of ill-health.
1 died.
4 found suitable employment before completing their course.
2 left the country.
3 were unsuitable.
2 left for reasons unknown.

Changes in Staff

There were two changes in the teaching staff of the Ontario School for the Blind last year. Miss Murray Snetsinger, literary teacher, resigned to be married, and Miss Emma Moffitt was re-appointed after a year's absence at Queen's University to fill the vacancy. Capt. S. C. Clegg, physical director and boys' supervisor resigned to follow other work, and his place was filled by Philip King of Brantford.

Health of the Pupils

In general, we have had less sickness than usual among our pupils during the past year, aside from the usual run of colds, and several cases of influenza. Two small children contracted whooping cough, but they were isolated, and fortunately no more cases developed. After they had sufficiently recovered they were sent to their homes to recuperate. On February 27th, two girls, neither of whom had much sight, collided with each other, and the accident resulted in the injury of one girl's eye. She was sent to the General Hospital for treatment. Our eye specialist advised the removal of the injured eye, but the mother would not consent and the girl returned to her home.

On Christmas Day, 1928, a young lad from Viking, Alberta, was stricken with cerebral meningitis, the result of a gunshot wound which caused his blindness. The boy was in a critical condition for weeks, and on his recovery our physician advised that he be sent to his home, as a recurrence of the malady was liable to happen at any time. The boy begged to remain, however, and was allowed to do so. On May 10th, 1930, he was again taken ill. His sister came on to assist in nursing him, but he died nine days later, and his body was taken to his home in the west.

Blind children seem to be less able to resist disease than other children. This may be due partly to lack of exercise to keep their bodies in good physical condition, and in some cases there are certain inherited weaknesses. We therefore make a point of watching their health carefully, building up their bodies with systematic physical training and healthful outdoor exercise. Plain, substantial food and regular hours of retiring and arising are insisted upon, and any small illnesses are given prompt attention by the trained nurse always on duty. Our physician visits the school daily.

Ethel Charlton Memorial Prize

Ethel Charlton, daughter of the late Honourable W. A. Charlton, was at one time a pupil in the Ontario School for the Blind, She died several years ago, and in May, 1930, a letter was received from Miss Charlton's sister, written on behalf of her mother, saying that it was their wish to establish an annual graduation prize to be given each year at the discretion of the Principal and his staff, to the most deserving blind pupil graduating that year. The prize, amounting to $75.00, was given in memory of her blind daughter, and was to be known as "The Ethel Charlton Memorial Prize." The first award was made in June, 1930 to Miss Mary Edwards, of Toronto, and was presented by Miss Charlton, a sister, who made a special trip to Brantford for that purpose.

This was a kind and generous action on the part of Mrs. Charlton, and also a fine appreciation of the work the Ontario School for the Blind is doing for the blind youth of Canada. The awarding of this prize annually will be of real value to some blind boy or girl leaving the school to make his or her own way in the world.

Field Day

Our Annual Field Day was held early in June in the school grounds. There were various events for the three different groups, seniors, intermediates, and juniors. There were races, broad and high jumps, pole vaulting, throwing the basketball, and novelty races, such as sack races, three-legged races, etc. On this day the pupils are always in high spirits, and rivalry is keen. After the athletic events there was a picnic supper served under the trees, and in the evening the teachers gave a dance for the boys in the school gymnasium.

June Concert

Our June Concert was held this year June 15th and 17th. It is always necessary to hold the concert on two nights to take care of all who wish to attend.

We have set for ourselves by previous performances, a high standard of excellence, and neither the pupils nor the teachers are willing to fall below this standard. This year's concert was satisfactory in every way. There was a short play in costume presented by a group of the junior pupils, and it was acted with naturalness, spirit and enthusiasm, calling forth much applause from the audience.

The musical numbers prepared under the direction of Mr. Lord and his staff, showed careful preparation by both students and teachers. A young girl from the west did excellent work with two piano selections, and a young man from Ontario in his vocal renditions, displayed marked natural ability, developed under sympathetic training. The musical programme was varied in character, including pipe organ, piano and violin selections and vocal and choral numbers. The choral work was especially good. The smallest children contributed their part to the evening in amusing recitations.

During the evening, awards of the different trophies were made—trophies won in the Field Day Competitions, and also the award of the Louis Braille Proficiency Trophy for girls, and the Irene Wettlaufer Efficiency Trophy for boys. The first award of the Ethel Charlton Memorial Prize was also made.

Improvements to Buildings and Grounds

During the summer holidays the boys' dormitory and the girls' dormitory were repainted throughout, and also eleven classrooms in the main building.

In October a portion of the roadway through the grounds, from Ava Road entrance to the entrance of the main building, was improved, a tarvia construction replacing the old dirt and gravel roadway. This has effected a great improvement in the appearance of our grounds.

Convention

In June I attended the Thirtieth Biennial Convention of the American Association of Instructors of the Blind, held in Vancouver, Washington, and had the opportunity of discussing with superintendents of other schools many problems in connection with the administration of a school for the blind. Many very excellent papers were presented dealing with various phases of school work, and these were afterwards discussed in detail. New inventions were on exhibition which gave certain definite ideas of new possibilities in vocational and other equipment. Round table groups were given the opportunity of discussing their special problems, and these were probably the most interesting contributions made at the Convention.

Returning by way of the Canadian West, I called upon the officials of the three western provinces who have to do with the sending of blind children to the school in Brantford, and gave them an idea of some of the requirements for admission. An interview of this kind serves much better to clear up difficulties arising from time to time, than correspondence during the term.

Royal Commission

In August of this year, I was summoned to Winnipeg to give certain information before a Royal Commission investigating conditions affecting the blind in Manitoba and Saskatchewan, as the Ontario School for the Blind educates children from these provinces. Dr. O. H. Burritt, Principal of the Pennsylvania Institution for the Instruction of the Blind, at Overbrook, Pa., was selected as Chairman of this Commission.

Among other things, the advisability of establishing a school in the west large enough to accommodate all blind children from Alberta, Manitoba and Saskatchewan, was discussed. I gave it as my opinion that while it was always advisable to have blind children educated as near home as possible, it was better to have them educated in a well-equipped school at a distance, such as the Ontario School for the Blind, than in a poorly equipped school near at home. The cost of maintaining a modern and up-to-date school for the blind was not small, and at the present time the western provinces were required by the Ontario Government to pay a not unreasonable sum for the maintenance and tuition of their pupils.

On October 19th, Dr. Burritt visited the Ontario School for the Blind to make his personal investigation of our school in this connection. While his report to the Royal Commission has not yet been received, he seemed well pleased with the organization of the school. The Manual Training Department, under Mr. W. B. Donkin, blind instructor, came in for a great deal of praise, and he requested that he be permitted to send the Manual Training Instructor from the Pennsylvania School to visit us and see what is being accomplished here.

The Canadian Choir

On October 11th, a group of Canadian singers, known as the Canadian Choir, left for the old land to compete in the famous Blackpool Musical Festival. While this of course had nothing to do with our school work, special interest was aroused because Mr. Frederick Lord, Musical Director of the Ontario School for the Blind, was the leader and organizer of this choir, and two other members of our staff were members of the choir, Mrs. Lord, Instructor of Violin, and Miss A. MacGillivray, our Visitor's Attendant. In competition with many other choirs, the Canadian Choir won fourth place, and Mr. Lord deserves commendation for his splendid work with this choir. They returned to Brantford on November 16th.

The Problem of the Subnormal Child

During late years an increasing number of applications for admission to the Ontario School for the Blind have had to be refused, as these applications were made in behalf of children who were subnormal mentally.

Children of this type are a misfit in any school devoted to the education of normal children, and much more so in a school for the blind where they must be the associates of normal children not only in the classroom, but in the dormitories and on the playground. They require training of a very special nature, and are mentally incapable of benefiting by the advantages offered in a school for general education, and they have a very detrimental effect upon the normal children with whom they must associate. The problem of educating a mentally normal blind child is a very different one from caring for a subnormal blind child. A bright child handicapped by blindness should not be subjected to the additional handicap of constant association with the mentally subnormal.

W. B. Race,
Brantford, February 7th, 1931. *Superintendent.*

PHYSICIAN'S REPORT

Sir,—I have the honour to submit the following report for the year ending October 31st, 1930.

During the year there were 114 cases of influenza colds, with 7 of these cases developing ear trouble as a result.

Two small girls contracted whooping cough and were kept in the school hospital for eight weeks, after which they were sent to their homes to recuperate for the rest of the term.

One boy was laid up with rheumatic fever from April 19th until May 11th, and on April 30th, the porter of our school contracted the disease in a more serious form, being unable to resume his duties in the school until midsummer. There were two cases of rheumatism, and two cases of quinsy. There were five cases of scabies.

A boy from the west who had recovered from a serious case of meningitis in our school hospital the year previous, came down with another attack on May 10th. The boy died nine days later.

Besides minor accidents cared for in our school hospital there were two of a more serious nature. One girl injured her eye in a collision with another girl. She was removed to the General Hospital, and placed under the care of our eye specialist. He advised the removal of the eye, but the parents objected and took the girl home. The head laundress of the school while engaged in her duties caught the finger on which she was wearing a wedding ring in the machinery. Her finger was so badly lacerated that it had to be removed. She was also cared for in the General Hospital.

Respectfully submitted,

J. A. Marquis,
Physician.

DENTAL SURGEON'S REPORT

Sir,—I have the honour to submit the following report for the year ending October 31st, 1930.

During the year all the pupils have had their teeth examined and the following work was done:—

Boys, Fillings inserted, one hundred and forty-five. Extractions, permanent teeth, eight. Deciduous teeth, thirty-two.

Girls, Fillings inserted, ninety-one. Extractions, permanent teeth, five. Deciduous teeth, seventeen.

The pupils are to be commended for the good attention they give to their teeth.

Once more I would mention the co-operation I receive from the pupils in attending to their work. This makes my duties easy and a pleasure. I would like their parents to know this.

Respectfully submitted.

J. R. Will,

REPORT ON MUSICAL INSTRUCTION

Sir,—I have the honour of forwarding my report on the Music Department, in connection with the Ontario School for the Blind at Brantford.

The annual examinations in Practical and Theoretical subjects took place in the week of June 2nd, 1930; and included tests in Organ-playing; Violin-playing; Solo and Choral Singing; Rudiments and Elementary Harmony; Intermediate Harmony; Counterpoint, and Musical History.

In Piano Playing—

Introductory Grade:	One pupil gained honours and two passed.
Elementary Grade:	Four gained honours, three passed.
Primary Grade:	Two received honours, two passed.
Junior Grade:	Three passed, two with honours.
Intermediate Grade:	One passed with honours, one passed.
Progressive Grade:	Two passed, one with honours.

Organ Playing—

Junior Grade:	Two passed, one with honours.
Progressive Grade:	One passed with honours.

Violin Playing—

Primary Grade:	One gained honours.
Junior Grade:	One passed.
Intermediate Grade:	One passed.

Singing and Voice-Production—

Elementary Grade:	One gained first-class honours.
Primary Grade:	Four passed, one with first-class honours and one with second-class honours.

Rudiments and Elementary Grade—

Six obtained first-class and four second-class honours.

Advanced Rudiments and Elementary Harmony—

Seven passed, five with honours.

Junior Counterpoint:	Seven passed, five with honours.
Musical History:	Eleven passed, two with first-class and nine in the second-class honours.

The candidates numbered 70, in all.

The students of the several Piano classes were satisfactory and reached a fairly high average in the examination. Two or three displayed exceptional talent. Evidently much more attention has been given to the essential points of good piano playing than in the previous two or three years.

The selected pieces presented for performance were well-chosen and of varied character, and were calculated to display the individual style of the various candidates to the best advantage.

Here I would suggest that this forward movement in the Piano section should be maintained and still further attention should be given to "touch" to the correct use of the pedals, to Rhythm and Interpretation generally. Evidently the practising of the younger children is being well supervised. The teachers in this particular Department, Mr. F. Lord, (Musical Director); Miss E. Perry, A.T.C.M., and Miss S. Miller deserve much praise for the general excellence of their teaching.

In Organ playing the results were very fair. One youth displayed a special gift for Organ performance, his natural ability is such that with further application and study under his teacher, Mr. Lord, he would become a good Church Organist and Recitalist.

The Violin Class: Under the guidance of Mr. F. Lord the work accomplished has been highly satisfactory. There has been a noticeable improvement in bowing, in tone and in interpretation. The classical selections performed by the students were of the best.

In Solo Singing the results were as a whole, quite good. Both songs and studies were sung with good tonal effect. Careful training was apparent in the clear enunciation and good pronunciation of the pupils' work.

The theoretical side of the examination showed marked improvement, especially in the Rudiments and Elementary work and in Musical History. One especially noticeable feature was the ability of the pupils to express their thoughts on paper more clearly than on former occasions. Miss Susie Miller has proved a very capable and painstaking teacher in theoretical knowledge.

The School Choral Class of about forty members did well. I listened with much pleasure to several two and four part compositions which were sung with considerable expression and with good tone quality. A Junior Choir under the direction of Miss Macgillivray sang several little pieces in one and two parts. Their performance was most gratifying.

The Tuning Class under Mr. Ansell's direction continues to do very excellent work in both tuning and in mechanical repairing. Several of the well-equipped students are now leaving to find work with piano firms in various parts of Canada.

In concluding my remarks, I should like to refer to the excellent discipline which exists in this important Government Institution. This is entirely due of course, to the able Principal and his staff of assistants who are to be congratulated.

I have the honour to be, Sir,

Yours obediently,

Albert Ham,
Mus. Doc., F.R.C.O.

LITERARY EXAMINER'S REPORT

Dear Sir,—I beg leave to present my first annual report as official examiner of your literary classes for the academic year ending June 30th, 1930.

At the time of my visit to your school, the teachers of the various grades submitted statements, showing work taken during the year in the different subjects. From these statements and by examining the pupils in these subjects, especially Spelling, Arithmetic, Reading, Writing, Geography, History, and Literature, I was able to compare the work of these pupils with that done by pupils in our Public Schools. Teachers and pupils are to be commended for the excellent work done in the various grades. In some subjects such as Arithmetic and Geography, more time is required in teaching, owing to the necessary use of the Braille slate in Arithmetic, and to the difficulty of using maps in Geography.

I should like to recommend a more extensive use of outline maps in Braille for the classes in Geography, if these are procurable. While excellent results are being obtained by the use of the large wooden maps, now in use, much time would be saved by having a map in Braille for each child.

The classes in Physical Culture demonstrated that great confidence has been developed in these blind children and whether in the Strathcona exercises, work on the gymnasium floor, or in games the children performed all exercises with great precision and confidence. I had the privilege of seeing the work of the boys at the annual concert in their pyramid building programme, and I cannot conceive of the work being done more correctly or with greater despatch.

The work of the pupils in sewing, cooking, knitting and crocheting reflects great credit on the teachers of these subjects. Much of the work is similar to that included in the course of study in Domestic Science, used in our Public Schools.

As the pupils who have completed the public school course of study are not preparing to enter other schools, they are given a course, which includes subjects not usually taken in the Lower School of our High Schools. These subjects, such as Ancient History and Physics, make a great appeal to these pupils. They attained great proficiency in advanced work in English Literature, having studied Julius Caesar last year. Their course also included Algebra, and Geometry.

Samples of work done in the Manual Training Classes were on exhibit during my visit, and I was much impressed by the skill developed in the pupils under the direction of Mr. Donkin.

I should like to commend you in your choice of teachers. Only those who have proven their efficiency as teachers in our Public School system can adapt themselves to new methods and it is no doubt owing to the careful selection of your teachers that such a high standard of work is maintained in your school.

Some children in the Primer Class were not making much progress. In contrast to the progress of other members of the class, this was very obvious. These children, handicapped by blindness, are also handicapped by being direct-learning children, and if they could see would be placed in an Auxiliary Class. Just as in our Public Schools, special classes are provided for such children, special provision should be made in some other school for those who are thus doubly handicapped. Ability to learn Braille is essential in this school if advancement is to be made.

I should like to express my appreciation to you for your co-operation and that of all members of your staff on my first official visit to your school.

Respectfully submitted,

W. J. Morrison, *Literary Examiner,*
Inspector of Public Schools, Brantford, Ontario.

OCULIST'S REPORT

Sir,—

I have the honour to report the result of the Ophthalmological examination of the new pupils entering the Ontario School for thé Blind, October, 1930.

The class is composed of eleven girls, and fourteen boys, twenty-five in all.

Condition of Sight

	Male	Female	Total
1. Limited objective vision in both eyes................	9	4	13
2. Limited objective vision in one eye................	2	3	5
3. Quantity of Perception of light in both eyes..........	1	1	2
4. Perception of light in one eye, none in other.........	..	1	1
5. Without perception of light in either eye............	2	2	4
	14	11	25

From the above classification, it is evident that there are four pupils who are totally blind in both eyes, constituting a higher percentage than usual, last year's class having two only.

Ten have lost the sight of one eye. Two have only quantitative perception of light. The remainder of the class have varying degrees of vision ranging from hand movements at two feet to ability to count fingers at eighteen or nineteen feet. Indeed, two or three have sufficient sight, that with special instruction, they might be able to carry on their school work visually.

Diseases Causing Blindness

	Male	Female	Total
1. Optic atrophy	1	1	2
2. Cataract (congenital)	3	..	3
3. Ophthalmia neonatorum	2	2	4
4. Injury in one eye and sympathetic ophthalmia in other	..	2	2
5. Iritis and uveitis	1	1	2
6. Microphthalmus	..	1	1
7. Myopia	4	1	5
8. Keratitis	..	1	1
9. Choroiditis	2	2	4
10. Buphthalmus	1	..	1
	14	11	25

Myopia appears to be the chief cause of defective vision in the above group, there being five cases, four of which are boys. Next in order of frequency are Ophthalmia Neonatorum and Choroiditis, four cases in each class, which is somewhat higher than in previous years; although two of the cases listed as Ophthalmia Neonatorum might more correctly be classed as Keratitis because the history is not entirely definite, even though the clinical picture is well defined.

Injury and Sympathetic Ophthalmia claims two cases, as does Uveitis and Optic Atrophy, and Cataract three, all occurring in boys. An occasional case of Microphthalmus and Buphthalmus were also noted.

There were no cases of Interstitial Keratitis.

Several pupils were re-examined and it was gratifying to note a visual improvement in two or three of them. In one other case, we felt that a proper correcting lens would be of help. We found no cases that might have been improved by surgical means but what had been taken care of before admission to the school.

Respectfully submitted,

Norman W. Bragg, M.D., F.A.C.S.

APPENDIX M

REPORT OF THE SUPERINTENDENT OF THE ONTARIO SCHOOL FOR THE DEAF

I have the honour to submit the Annual Report of the Ontario School for the Deaf for the year ending October 31st, 1930.

Appointment as Superintendent and Principal

As my appointment became effective on July 1st, the report on the part of the year from November 1st, 1929, to July 1st, 1930, is based on the records on file in the office.

Buildings and Equipment

The school building is quite new, having been completed in the autumn of 1922. It has been kept in excellent condition and, with a few minor repairs, can be made as good as when it was opened.

The following repairs and improvements have been made during the last three months:

(*a*) The lodge house and the "green" house have been removed and the grounds under them levelled.

(*b*) The Superintendent's residence and the maids' building have been repaired, painted and decorated.

(*c*) The open ditch at the east side of the grounds has been tiled and filled in with the accumulations of years of rubbish.

(*d*) The boys' dormitory has been painted and decorated.

(*e*) New steam lines have been installed to the dormitories.

(*f*) Playground equipment, consisting of swings, teeters, giant stride, slides, travelling rings, sand boxes, etc., have been installed.

(*g*) A new set of weigh scales, with an adequate covering, has replaced the old ones, which were condemned.

(*h*) A new verandah replaces the one in the front of the farmer's house, which was tumbling down.

(*i*) The verandah on the hospital has been repaired.

The other needed repairs are now receiving the consideration of the officials and will be made in a short time.

The Work of the School

The academic work is carried on by thirty-one teachers, all of whom have taken the Normal School course and qualified for Second Class or First Class certificates. Owing to the increase in attendance, one teacher was added to the staff in January.

The work itself included classes from the kindergarten to the fifth form and was carried out satisfactorily except that Art as a subject seems to have been omitted in the higher grades. Four pupils were granted Entrance standing in 1930 on condition that the course in Art be completed.

Four instructors were employed for the industrial work, but this phase of the course seems to have been treated somewhat as an additional subject and not as an integral part of the curriculum. In spite of this rather unsatisfactory arrangement, good results were accomplished.

Although there is a farm connected with the school, the pupils have not received any training in either Agriculture or Horticulture.

Attendance

The total number of pupils enrolled during the session of 1929-30 was 320, the average being 310. Of these, forty-seven did not return in September.

The attendance in classes was lower than it should have been as a result of a severe epidemic of "Grippe" or "Flu" in December, due in part at least, to the fact that it was impossible to regulate the heat of the dormitories because the thermostats were out of commission.

Method of Teaching

Several methods have been in use in the Schools for the Deaf in the past. All of these, in the hands of enthusiastic teachers, have accomplished a great deal in placing the Deaf in a condition to enjoy, to a greater degree, the position in society in which they found themselves. The term "dumb" has, from time immemorial, been applied to those unfortunate enough to be deaf. During the last quarter of the nineteenth century, many noted educators and scientists, among them being Dr. Alexander Graham Bell, the inventor of the telephone, contended that the Deaf were not dumb, and that as they had all the organs of speech, they could, with the proper instruction, be taught to speak the same as those with normal hearing. A system was initiated, known as the Oral Method, by which the sign language was eliminated and the deaf were taught lip-reading and speech and their vocal organs exercised in such a way that they could speak intelligibly and intelligently. The results of the use of the Oral Method are so far beyond those achieved by any of the other methods, that it is now used almost universally.

Wonderful aids to success are the use of the piano and the radio ear. The former, through the use of rhythmic exercises, helps in giving tone, emphasis and inflection, and at the same time, trains the pupils in graceful, regular movements of the different parts of the body. The Radio Ear makes use of any residual hearing that a pupil has and enables him to hear the natural tone of the voice of the teacher, or of himself or other pupils. It is the best means of acquiring a natural tone of voice, that is available up to the present time. The Radio Ear we now have gets its power from a storage battery. As the current is irregular and the battery soon becomes exhausted, the efficiency of the machine gradually decreases. We are hoping, however, to exchange it for one operated by alternating current, in which the efficiency remains constant.

Plans are under way to increase the efficiency of the industrial department by the addition of more instructors and by replacing the present shops with new and modern buildings and equipment.

There is also great need for a gymnasium, in which pupils will be able to receive proper physical training, particularly during the winter months.

The Bursar's Statement of Expenditure, the Physician's report and the report of the Literary Examiner are appended hereto.

H. B. Fetterly,
Superintendent.

Belleville, November 1st, 1930.

Officers of the School

H. B. Fetterly, M.A.	Superintendent and Principal.
C. B. McGuire	Bursar.
W. W. Boyce, M.D.	Physician.
J. Chant, M.D.	Aurist and Oculist.
Mrs. H. MacCluggage	Dietitian-Housekeeper.
Miss K. Bawden	Secretary and Stenographer.
Miss M. Allison	Trained Nurse.

Teachers

D. R. Coleman	Teacher Emeritus.

Oral

Supervising Teachers:
W. J. Campbell.
Miss Elizabeth Deannard.
Miss Catherine Ford.

Teachers:
Geo. F. Stewart.
E. B. Lally.
M. S. Blanchard.
Miss V. Handley.
Miss E. Nurse.
Miss L. Carroll.
Miss E. Panter, B.A.
Miss B. Rierdon.
Miss M. I. Cass.
Mrs. P. Blanchard
S. A. Gordon.
Miss K. Daly, B.A.
Miss F. M. Bell.
Miss C. O'Connell.
Mrs. A. Wannamaker.
A. C. Stratton.
Miss M. Benedict.
Miss M. B. Code.
Miss M. Hegle.
Miss M. Lally.
Miss R. Van Allen.
Miss G. Burt.
Miss M. Squier.
Miss A. James.

Teachers-in-Training:
Second Year: F. P. Cunningham, A. J. Clare, Miss G. E. Rathbun, and Miss G. Parry.

Mrs. M. Glenn	Teacher of Sewing.
L. Morrison	Teacher of Printing.
T. O'Hara	Teacher of Carpentry.
A. Morrice	Teacher of Shoemaking.
J. N. Boyd	Baker.

LITERARY EXAMINER'S REPORT

I beg to submit for your consideration and for future reference my report on your school for the current school year. While we personally discussed many points pertaining to the work, during my official visits, still there are a few points that I wish to place in permanent form, and a few suggestions that I wish to make.

Having spent fifteen days among the various classes and having made two full inspections, one during the Autumn Term and the other recently, I may claim to have a definite idea of conditions as they exist in the School. And having this knowledge, I have no hesitation whatever in expressing my approval of what you are trying to accomplish for these children, who are handicapped by nature in the absence of hearing. Persons, who have not been intimately associated with this class of children, cannot properly appreciate the extreme difficulty under which you and your staff are labouring. After having inspected the School for twenty-three consecutive years, I do appreciate your task and most heartily compliment the staff on what they have been able to accomplish. It is true that you have a few classes, where the children for various reasons are exceedingly slow in the ordinary school subjects, and I will refer to them a little later. But it is also true that you have a number of classes, who are more than ordinarily bright. These are making good progress and are happy in their work. I found the utmost confidence prevailing between the pupils and their teachers. There is a side to this work that the public generally knows nothing about, and it is the almost parental interest that your teachers take in these children. It does not matter quite so much with the older pupils, but even here it is evident, but among the little fellows, who are away from their mothers when all children at times want to be cuddled up to a mother, these young lady teachers, as far as it is possible, are mothers to these children. To me it is very touching, and if the mothers could see what I have repeatedly seen, it would comfort them greatly, as they think of the little one away from the home nest.

I have, on different occasions, referred to the harmony that prevails among the several members of the staff. I am pleased to again comment on that happy condition of affairs. It speaks loudly for the loyalty of the staff that conditions are as they are after the lapse of time since the late esteemed Superintendent passed to his reward.

I regret exceedingly that it was not my privilege to inspect the class who have passed High School Entrance (but the Minister directed otherwise). I have no doubt, however, that they have continued to do the same class of work that they did before they entered that class. I also regret that you have found it not possible to have a class of pupils ready for Entrance to High School at the close of this school year. I hope you will be able to retain them for another year and then, if they have to leave school, they will go out with a certificate of standing that will appeal to the average person as demonstrating that these children can successfully complete the Public School Course of Study.

I gave particular attention to the work in "Silent Reading" that Miss Ford is stressing in her department of the school. I saw it applied in practically every class in her department and the benefits are very evident. I told her, and I repeat here, that I consider it one of the best features that has been introduced into your excellent school in many years. The children get a grasp of language that has been sadly lacking in past years. I strongly recommend that it be carried on as far as circumstances warrant. In its more advanced forms, it might well be extended beyond the Junior Department. As you probably know, the preparation of the material requires a lot of time and labour on the part of Miss Ford and her staff of teachers. The duplicator they have does not do satisfactory work and adds materially to the labour that must be performed outside of class hours altogther. I am pleased to learn that you have recommended a machine for this purpose of duplicating, that you and Miss Ford believe will be satisfactory.

From the fact that you have an excellent system of class records, it is not necessary for me to refer to individual classes, but I will say that I found the proficiency in the several classes all that could be expected, and the progress is being made.

While your school is nominally divided into three departments, Junior, Intermediate, and Senior, still the Course of Study has been so well arranged that a child passes from one department to the next almost without knowing it; while if necessity compels him to leave at the end of any department, he has a completed course that is complete in itself as far as it goes. I like your arrangement well.

The Rhythm Work has made wonderful progress and it is easily seen that the work is well worth while. The demonstrations that I witnessed, both with junior and senior pupils, clearly proved its value.

I missed the demonstration of the Radio Ear and Audiometer at this inspection, as the machines are not in working order. We all are agreed on the fact that they are of value, and they should be put into working order and into use again at once.

Referring again to those classes, where the children are not able to satisfactorily handle literary work. We have them in all schools, while possibly you have a slightly larger proportion of them. It seems to me that it would be better to put a stronger emphasis on "Handwork" with these children. I would give them all the language that they are capable of taking, but I would have a larger amount of work similar to that carried on in Auxiliary Classes throughout the Province. Last year, I recommended a greater use of "Ungraded" classification with these children. What I referred to is known usually as "Promotion Classes," where for any reason whatever, the children have fallen behind their class, these classes help them to catch up, as each child is practically a class by himself. As I see it, it is not possible to teach some of our classes as classes. The children differ so widely in ability and attainments, that they must of necessity be taught individually. That is exactly my suggestion of last year, and I am now adding a recommendation for more "Handwork."

In conclusion, let me express to you, and through you, to your staff my appreciation of the kindness and courtesy shown to me during my inspection.

All of which is respectfully submitted.

H. J. Clarke, B.A.,
Public School Inspector,
South Hastings, Belleville and Trenton.

PHYSICIAN'S REPORT

In making my annual report on the health of the school for the term of 1929-30, I may be permitted to mention, briefly, what has been the ordinary custom at the beginning of the school term in September.

The bringing together of a large number of children, approximately 300, from practically all parts of the Province of Ontario and from conditions of home life that vary greatly in a sanitary way is obviously of a good deal of importance, as it may affect the subsequent health of the school. Previous to leaving home, the parents are advised that certain means or precautions be adopted to avoid carrying any infection, that might prejudice the health of others or involve the school in some epidemic. The school age of children is the time when communicable diseases are most frequent, and consequently, the utmost caution is necessary if such sickness is to be prevented. The precautions, taken at home, are supplemented by others as the pupils arrive at school. The Nursing Sister, Supervisors and others, coming into immediate contact with the children, are alert and watchful of anything of a suspicious character or of any apparent departure from health, and if at all in doubt, the child is at once quarantined as a "suspect" until a diagnosis is made. The trunks and other articles are disinfected. As early as possible all children, coming in for the first time, undergo a complete medical examination and this, with the aid of their personal reports, determines the state of health, any infirmity or physical defect or congenital or hereditary taint, and as far as possible, the mentality, which generally can be ascertained satisfactorily at some subsequent time and after observation and training. Following this and as soon as practicable, a medical examination is made of all the children of the school, their height, weight and measurements are taken, also, any other feature or personal defect or peculiarity, all being recorded for future reference and comparison. There are always a number of children entering or returning to school, whose health is below par, gastro-intestinal disorders being quite common, underweight, a condition of marasmus, constipation, indigestion, skin affections, etc. With corrected habits, regulated physical exercise, proper sanitary attention, diet and treatment, they usually quickly respond and are soon reinstated. Occasionally we have pupils whose condition warrants little hope of complete restoration. These we endeavour to improve, make as comfortable as possible and enable them to continue in school.

During the early part of last session, we had very little sickness that would interfere with classes, and consequently, very little loss of school time.

About the middle of October, we had a small and mild epidemic of what seemed clinically ordinary sore throat. Swabs from many of these were sent to the Provincial Laboratory to determine the nature of the infection. It proved to be a mild sore throat of an infectious character. None of the children were very sick, some did not complain of anything, and most of them had no symptoms whatever excepting a slight redness of the throat with a little soreness.

In January, we had what seemed to be our seasonal epidemic of influenza, coming at a time when weather conditions were unsettled and when the same condition was raging generally throughout the Province. We have more or less influenza every year and it seems to be something we are powerless to escape. We had about eighty-five cases, some quite mild, but on the aggregate, more severe than many previous visitations, and some cases were decidedly virulent and accompanied by dangerous complications, particularly pneumonia and middle ear trouble. We had no other communicable diseases excepting chicken-pox of the mildest type a short time before the close of school. The accidents and injuries that occur, are generally incidental to the sports engaged in on the playgrounds, usually minor in character, such as contusions, sprains, etc., and do not interfere with classroom work. Occasionally we have fractures and dislocations. I regret to have to report the death of a young lad, James Morgan, which occurred on January 26th, 1930, after five days' sickness with a virulent form of influenzal pneumonia.

At the same time, Leonard Byers was dangerously sick with pleuro-pneumonia. A resection of a rib and drainage of pus from the chest was necessary. His convalescence was slow and it was considered best to send him to the Sick Children's Hospital in Toronto, where he ultimately recovered. In the following summary, I have omitted, including the above epidemics, also many cases of mild temporary sickness or indispositions incidental to growing children.

Gastro-intestinal disorders and constipation, 30; abscess, 2; asthma, 1; bronchitis, 7; adenitis, 2; skin diseases and acne, 7; enuresis, 2; jaundice, 3; acute and chronic otitis media, 12; laryngitis, 2; inflammatory rheumatism, 1; scabies, 6; debility, 5: epilepsy, 1; tonsilitis, 5; pneumonia ,11; pleuro-pneumonia, 2; empyæma, 1; appendicitis, 2 (one operation); orchitis, 1; minor injuries, 8; fractures, 2; fracture and dislocation, 1; pollipis of the ear, 1; paralysis of the hand, 1.

Yours respectfully,

W. W. Boyce,
Physician.

Total enrolment	3,369	23	....
Number of teachers engaged	101	....	3

II.—SECONDARY SCHOOLS

Figures below cover the school year September, 1929, to June, 1930, except for financial items which are for the calendar year 1929

(a) High Schools and Collegiate Institutes

	1929	Increase for the year	Decrease for the year
Number of schools: Collegiate Institutes, 63; High Schools, 142	205	5	....
Enrolment on last school day in May: boys, 27,948; girls, 29,527	57,475		
Average daily attendance	52,496	3,041	....
Percentage of average attendance to total enrolment...	91.34		
Number of teachers: men, 919; women, 1,128; of whom 82 men and 74 women supervise or teach part time in Vocational Department	2,047	92	....
Number of University graduates	1,838	101	....
Percentage of University graduates	89.79	.95	....
Number of specialists	1,522	79	....
Percentage of specialists	74.35	.35	....
Average annual salary:			
Principals	$3,293	$103	....
Assistants	$2,380	$28	....
All teachers	$2,472	$34	....
Highest salary paid	$5,000	....	....
Gross expenditure by Municipalities	$10,621,982	$1,153,379	....
Legislative grants received	443,727	$4,543	....
Net expenditure by Municipalities	$10,178,255	$1,148,836	....

(b) Evening High Schools

	1929	Increase for the year	Decrease for the year
Number of schools	23	3	....
Total enrolment	3,563	435	....
Number of teachers	158	31	....

(c) Continuation Schools

	1929	Increase for the year	Decrease for the year
Number of schools:			
Five-teacher schools, 2; four-teacher schools, 1; three-teacher schools, 38; two-teacher schools, 155; one-teacher schools, 18	214	....	2
Enrolment: on last school day in May: boys, 3,844; girls, 5,524	9,368		
Average daily attendance	8,349	188	....
Percentage of average attendance to total enrolment...	89.12		
Number of teachers: men, 167; women, 288	455	....	5
Number of University graduates	53	....	11
Percentage of University graduates	11.65	....	1.44
Number of specialists	36	....	....
Percentage of specialists	7.91	.08	....
Average annual salary:			
Principals	$1,833	$50	....
Assistants	$1,358	....	$6
All teachers	$1,576	$6	....
Highest salary	$3,550	....	$250
Gross expenditure by Municipalities	$1,256,360	....	$78,536
Legislative grants received	$230,977	$9,830	....
Net expenditure by municipalities	$1,025,383	....	$88,366

(d) Vocational Schools

	1929	Increase for the year	Decrease for the year
Number of Day schools	51	4	....
Total full-time enrolment: boys, 12,184; girls, 13,374..	25,558	2,381	....
Average daily full-time attendance	20,632	2,404	....
Total part-time enrolment: boys, 1,121; girls, 979	2,100	....	311
Total special enrolment: boys, 454; girls, 983	1,437	295	....
Number of full-time Day school teachers: men, 548; women, 345	893	198	....
Number of part-time or occasional Day school teachers	194	....	10
Number of Evening schools	67	1	....
Total Evening enrolment	44,431	2,838	....
Number of Evening teachers: men, 954; women, 532..	1,486	88	....
Gross expenditure by Municipalities	$6,173,009	$82,071	....
Legislative grants received	$1,036,441	$102,702	....
Net expenditure by Municipalities	$5,136,568	....	$20,631

Comparative School Statistics 1912-1929

I.—ELEMENTARY SCHOOLS

1. Day School Attendance

Year	Total Enrolment	Boys	Girls	Average Daily Attendance	Percentage of Average Attendance to Total Enrolment	Percentage of Aggregate to Possible Aggregate, i.e., Percentage of Actual to Possible Attendance
1912	467,022	239,187	227,835	291,210	62.35	......
1917	527,664	266,255	261,409	342,571	64.92	......
1922	601,485	306,225	295,260	425,018	70.66	86.80
1926	623,231	318,224	305,007	444,236	71.28	88.01
1927	634,592	324,138	310,354	456,978	72.01	88.49
1928	641,128	327,713	313,415	459,847	71.72	89.09
1929	646,076	329,893	316,183	465,857	72.11	90.45

In arriving at the possible aggregate, all the school days for the term of a pupil of non-compulsory age. and all the school days of a child of compulsory age, are counted, except in case of illness, properly certified, or of exemptions allowed by law, so long as he is a resident of the school section or until he is registered in a secondary school.

Duplications of enrolment in elementary schools owing to removals from one elementary school to another during the year, or owing to transfer to secondary schools, are carefully avoided in this calculation.

The percentage of average attendance to total enrolment, viz., 72.11, is low owing to the fact that a pupil once entered on the roll, if only for a few days, is counted in the enrolment for the year. The percentage of actual to possible aggregate attendance (90.45) as given above, represents correctly the situation as regards regularity of attendance in the elementary schools.

2. Classification of Pupils

(A) RURAL

Year	Kindergarten	Kindergarten-Primary	Form I	Form II	Form III	Form IV	Form V *	Total	Percentage of total Enrolment

XVII	County of Carleton (in part); City of Ottawa (in part)	F. J. McDonald, B.A.	Ottawa, 101 Grove Ave.
XVIII	City of Ottawa (in part)	C. A. Latour, B.A., B.L.	Ottawa, 67 Osgoode St.
XIX	County of Prescott (in part); Towns of of Hawkesbury, Vankleek Hill	F. Choquette, B.A.	Hawkesbury.

B—High Schools and Collegiate Institutes:

I. M. Levan, B.A.
R. W. Anglin, M.A.
A. J. Husband, B.A.
W. A. Jennings, B.A.
A. G. Hooper, M.A.

C—Continuation Schools:

G. K. Mills, B.A.
J. P. Hoag, B.A.

D—Technical Schools:

D. A. Campbell, B.A.
F. S. Rutherford, B.A.Sc.
M. A. Sorsoleil, B.A.
Miss A. M. Hamill, B.A.
L. S. Beattie, B.A.

E—Inspector of Manual Training and Household Science—Albert H. Leake.

F—Inspector of Agricultural Classes—J. B. Dandeno, B.A., Ph.D.

Address of above Inspectors—Toronto, Parliament Buildings.

TABLE 26

SUMMARY OF HIGH SCHOOL ENTRANCE EXAMINATION RESULTS, 1930

Enrolment, Senior Fourth Grade, 1929		61,993
Number of High School Entrance Candidates:		
Recommended by Principal on Group II	13,896	
Taking written test on Group II	33,542	
		47,438
High School Entrance candidate percentage of 1929 Senior Fourth Enrolment		76.52%
Number of candidates successful on written test on Group II:		
By Regulation 11—(1) and (2)	22,168	
(3) and (4)	1,733	
(5)	314	
(6)	383	
		24,598
Total number of successful candidates		38,494
Percentage of all candidates who were successful		81.15%
(28.61% by Principal's recommendation and 52.54% by passing written test).

TABLE 34

LIST OF QUALIFIED CADET CORPS, 1930

Collegiate Institutes, High, Public and Separate Schools having Cadet Corps with at least twenty members at least twelve years of age and not over eighteen in the case of Public and Separate Schools, and at least fifteen years of age and not over eighteen in other cases.

COLLEGIATE INSTITUTES:—Brantford, Brockville, Chatham, Clinton, Cobourg, Collingwood, Cornwall, Galt, Hamilton (2), Ingersoll, Kenora, Lindsay, Morrisburg, Napanee, Niagara Falls, North Bay, Orillia, Oshawa, Ottawa (2), Owen Sound, Pembroke, Perth, Peterborough, Port Arthur, Renfrew, St. Catharines, Sarnia, Smith's Falls, Stratford, Strathroy, Toronto (9), Vaughan Road, Walkerville, Windsor, Woodstock. Total, 45.

HIGH SCHOOLS:—Aurora, Belleville, Brampton, Burlington, Campbellford, Dunnville, Essex, Fergus, Fort Frances, Leamington, Mitchell, Petrolia, Port Perry, Ridgetown, Scarboro', Stamford, Tillsonburg, Trenton, Uxbridge, Welland, Weston, Whitby. Total, 22.

VOCATIONAL SCHOOLS:—Chatham, Hamilton, Ottawa, Toronto (2), Windsor-Walkerville. Total, 6.

CONTINUATION SCHOOLS:—Brussels, Dryden, Havelock, Iroquois Falls, North Mountain, Ridgeway, Wheatley. Total, 7.

PUBLIC SCHOOLS:—Arthur, Aylmer, Barrie, Belleville (4), Bowmanville, Brampton (2), Brockville (3), Campbellford, Chatham (3), Cobourg, Dunnville, Fort Frances, Guelph, Hamilton (27), Keewatin, Kenora, Kingston (6), London (18), Meaford, Mimico, Niagara Falls (5), Orangeville, Ottawa (12), Paris, Parry Sound, Peterborough (6), Port Arthur (4), Port Hope, Ridgeway, St. Catharines (7), St. Mary's, St. Thomas (5), Stratford (5), Toronto (74), Trenton, Walkerville, Walkerton, Weston, Woodbridge. Total, 206.

RURAL SCHOOLS:—S.S. 7 Esat York (2), S.S. 25 York S.S. 28 York, (York County); U.S.S. 4 Ancaster and Barton (Wentworth County); S.S. 2 Nepean (3), (Carleton County). Total, 8.

SEPARATE SCHOOLS:—London, Toronto (26). Total, 27.

Total number of Cadet Corps, 321. Provincial Government Grant (at $50 each), $16,050.

TABLE 35—CLASSIFICATION OF URBAN SCHOOL CENTRES BY COUNTIES AND DISTRICTS, 1929

Counties	Cities	Towns	Incorporated Villages
Brant	Brantford	Paris	
Bruce		Chesley, Kincardine, Southampton, Walkerton, Wiarton	Hepworth, Lion's Head, Lucknow, Mildmay, Paisley, Port Elgin, Ripley, Tara, Teeswater, Tiverton.
Carleton	Ottawa	Eastview	Richmond, Rockliffe
Dufferin		Orangeville	Grand Valley, Shelburne
Dundas			Chesterville, Iroquois, Morrisburg, Winchester
Durham		Bowmanville, Port Hope	Millbrook, Newcastle
Elgin	St. Thomas	Aylmer	Dutton, Port Stanley, Rodney, Springfield, Vienna, West Lorne
Essex	Windsor, East Windsor	Amherstburg, Essex, Kingsville, La Salle, Leamington, Riverside, Sandwich, Tecumseh, Walkerville	Belle River
Frontenac	Kingston		Portsmouth
Glengarry		Alexandria	Lancaster, Maxville
Grenville		Prescott	Cardinal, Kemptville, Merrickville
Grey	Owen Sound	Durham, Hanover, Meaford, Thornbury	Chatsworth, Dundalk, Flesherton, Markdale, Neustadt, Shallow Lake
Haldimand		Dunnville	Caledonia, Cayuga, Hagersville, Jarvis
Halton		Burlington, Georgetown, Milton, Oakville	Acton
Hastings	Belleville	Deseronto, Trenton	Bancroft, Deloro, Frankford, Madoc, Marmora, Stirling, Tweed
Huron		Clinton, Goderich, Seaforth, Wingham	Blyth, Brussels, Exeter, Hensall, Wroxeter
Kent	Chatham	Blenheim, Bothwell, Dresden, Ridgetown, Wallaceburg, Tilbury	Erieau, Thamesville, Wheatley

CLASSIFICATION OF URBAN SCHOOL CENTRES BY COUNTIES AND DISTRICTS, 1929

Counties	Cities	Towns	Incorporated Villages
Lambton	Sarnia	Forest, Petrolia	Alvinston, Arkona, Courtright, Oil Springs, Point Edward, Thedford, Watford, Wyoming
Lanark		Almonte, Carleton Place, Perth, Smith's Falls	Lanark

1931

UNIVERSITY OF TORONTO

REPORT

OF THE

BOARD OF GOVERNORS

For the Year Ended 30th June, 1930

To His Honour the Lieutenant-Governor-in-Council:

The Governors of the University of Toronto have the honour to submit their twenty-fourth annual report, which embraces the President's review of the academic work of the University and its Colleges for the Session 1929-30, the reports of various officers and departments, and the customary detailed statements of the receipts and expenditures of the Board for the fiscal year which closed on 30th June, 1930, with the certificate of the auditor, Mr. G. T. Clarkson, attached.

During the last Session of the Legislative Assembly an Act was passed (20 Geo. V, Cap. 65) vesting in the Crown further University lands on the east side of the Queen's Park and authorizing the payment to the Governors of a compensation of $75,000 therefor. This sum was subsequently received from the Provincial Treasurer and the greater part of it applied in the purchase of three properties on St. George Street which, after certain necessary alterations and rehabilitation, were ready for use for University purposes at the opening of the academic Session. These expenditures, however, mainly fall into next year's accounts.

Reference was made in last year's report to the commencement and progress of the work of construction of the Banting Institute. The building was practically finished in time for a formal opening in September, 1930, when a very distinguished gathering of medical men and scientists, headed by Lord Moynihan of Leeds, inspected the building and expressed the highest approval of its completeness and of the facilities therein provided. The total cost, including furnishings, will be something over $900,000.

During the early summer the construction was begun of the new University College Women's Residence at the corner of Hoskin Avenue and St. George Street, the cost of which, estimated at $450,000, will be provided from the bequest of the late E. C. Whitney. It is hoped that this building will be available for occupancy at the opening of the Session 1931-32.

At a later date work was begun upon an addition to the Mill building and a clearance of the site for the new Botanical building made. These will be referred to at greater length in next year's report.

The ordinary revenue of the year was $1,448,363, and in addition there was received the special Legislative Grant of $1,308,660, making a total gross income of $2,757,023.

The expenditure under the appropriations for salaries and maintenance falling to be met out of general revenue (exclusive of the Ontario College of Education, which is maintained by a separate vote) was $2,632,835. To this must be added the sums written for interest to Scholarship and other trust funds, $38,728, making an aggregate expenditure from revenue of $2,671,563. The balance of $85,460 has been carried forward in the Special Contingent Fund as a provision for the needs of the year now current or those of future years.

All of which is respectfully submitted.

H. J. Cody,
Chairman.

Toronto, 28th November, 1930.

PRESIDENT'S REPORT

To the Governors of the University of Toronto:

GENTLEMEN:

I beg to submit the following report on the academic work of the University and University College during the twelve months ended June 30th, 1930.*

The total staff of the University and University College numbered 725, of whom 105 were professors, 76 associate professors, 53 assistant professors, 144 lecturers, associates (in medicine and dentistry) and instructors in the College of Education, 2 directors, 1 director of field work, 344 demonstrators, fellows and instructors with sessional appointments.

The total number of students in attendance was 7,178, of whom 4,382 were men and 2,796 were women, 6,759 being registered in the colleges and faculties, and 419 in the departments. The number of students proceeding to degrees was 6,018, and to diplomas, 536.

The following retired:

William James Loudon, B.A., professor of mechanics; James Playfair McMurrich, M.A., Ph.D. (Johns Hopkins), LL.D. (Michigan, Cincinnati), professor of anatomy, and dean of the School of Graduate Studies; James Brebner, B.A., LL.D. (Queen's), registrar.

Dr. J. P. McMurrich graduated from this university at an early age with a brillant record, which he so enhanced by post-graduate work at Johns Hopkins that soon he began a career in teaching and research which was spent in several universities. From Michigan he returned as head of the department of anatomy to his *Alma Mater* in 1907. During his tenure of office he not only shed lustre on the department but succeeded in having the new building erected which will stand as a memorial. He became the first dean of the School of Graduate Studies, the standards of which he did much to establish. An anatomist of international repute, a broadly versed scientist, and a genuine humanist, as is shown in his recent edition of *Leonardo Da Vinci as an anatomist*, Dr. McMurrich is above all a man beloved by his colleagues, whose best wishes follow him into his retirement.

Dr. James Brebner, for thirty-seven years registrar of the university, served his *Alma Mater* with great fidelity. Early and late he worked with few holidays. He knew the students better than any other person, and spent a great portion of his time in giving advice to those who met baffling problems in their course or found it hard to decide what course to follow. He was known to thousands who identified the office of registrar with Dr. Brebner. He knew the details of the curricula as no one else and his advice as to consequences of change was invaluable. He takes to his well-earned retirement the gratitude and kindly remembrance of generations of former students and of members of the staff of the university.

Professor W. J. Loudon, also having reached the age limit, carries with him the kindly thoughts of his colleagues and students, as he withdraws from his active duties in the university. He was an excellent teacher, clearly expressing his ideas, and was approachable by all. He is a man of much broader interests than those of his profession both in respect of natural history and the story of the university.

---

*Complete details as to numbers of teaching staff, students, enrolment in classes and examinations are given in the Registrar's Report, Appendix B.

Dr. Frederick Le Maitre Grasett, emeritus professor of surgery, passed away amid the regrets and affectionate remembrance of his former colleagues and students. A gentleman of the finest quality, he brought to this university the best traditions of Edinburgh when Lister was in his prime, and throughout his long life adorned his profession.

The following resigned their positions:

James Alfred Dale, M.A. (Ox.), professor and director of the department of social service; William Andrew Irwin, M.A., D.B., Ph.D. (Chicago), associate professor of oriental languages; C. Alvin Snell, D.D.S., associate professor of periodontology; William Glenn Trelford, D.D.S., associate professor of periodontology; Mrs. Gladys I. Davis, M.A., assistant professor of English; Norman Tempest Maclaurin, M.B., associate, dental histology, bacteriology and pathology.

In the comparatively few years in which at this university Professor Dale enjoyed full vigour, he inspired the department with his sympathetic and well disciplined outlook upon social problems, and amid universal regret was constrained to resign by reason of ill-health.

Leave of absence was granted to the following:

William Robert Taylor, M.A., Ph.D., professor of oriental languages, to take the directorship of the American School of Archaeology at Jerusalem; Arthur Francis Chesterfield Stevenson, M.A. (Camb.), assistant professor of mathematics for post-graduate study; and by reason of ill-health, to the following: Joseph Sutherland Graham, M.B., professor, dental pathology; James Alfred Dale, M.A. (Ox.), professor and director of the department of social science; Frederick William Marlow, M.D., C.M., F.R.C.S. (Eng.), associate professor of obstetrics and gynaecology; Walter Scott Guest, B.A.Sc., assistant professor of electrical engineering.

The following new appointments and promotions were made during the year:

In the Faculty of Arts—Appointments:—Chester Martin, M.A. (Ox.), LL.D. (Man.), professor of history; Frederick Clyde Auld, M.A. (McGill), B.A., B.C.L. (Ox.), associate professor of Roman law and jurisprudence; William Line, B.Sc. (Mt. Allison), M.A., B.Ed. (Alb.) Ph.D. (Lond.), assistant professor of pyschology; Arthur Sutherland Pigott Woodhouse, B.A., Ph.D. (Harv.), assistant professor of English; John David Burk, B.A., lecturer in mathematics; Harry Rothwell, B.A. (Manchester), lecturer in mediaeval history; Donald James McDougall, B.A. (Tor. Ox.), lecturer in history; Miss E. F. Deadman, B.A., M.A. (Alb.) S.M. (Chic.), lecturer in psychology; William Malcolm Drummond, B.A. (Queen's), M.A. lecturer in political economy; Joseph Frederick Parkinson, B.Comm. (Lond.), lecturer in political economy; Miss Irene Mary Biss, B.A. (Camb.), M.A. (Bryn Mawr), lecturer in political economy; Frederick Richard Crocombe, M.A. (Camb.), lecturer in accountancy; Miss Mary Craig Needler, M.A., Ph.D. (Chicago), lecturer in ancient history; Edward Killoran Brown, B.A., lecturer in English; F. V. Winnett, M.A., Ph.D., lecturer in oriental languages.

Promotions:—Arthur Leonard Parsons, A.B. (N.Y.), from an associate-professorship to a professorship in mineralogy; Wilhelm Ernst Blatz, B.A., M.B., Ph.D. (Chicago), from an associate-professorship to a professorship in psychology; Charles Norris Cochrane, B.A., M.A. (Ox.), from an associate-professorship to a professorship in ancient history; William Howard Martin, M.A., Ph.D., from an assistant-professorship to an associate-professorship in chemistry; John Wood MacArthur, A.B. (Ober.), M.A. (Wabash), Ph.D. (Chicago), from an assistant-professorship to an associate-professorship in genetics (biology); Thomas Forsyth McIlwraith, M.A. (Camb.), from an assistant-professorship to an associate-professorship in anthropology; Harold Adams Innis, M.A. (McM.), Ph.D. (Chicago), from an assistant-professorship to an associate-professorship in political economy; Hubert Richmond Kemp, M.A., from an assistant-professorship to an associate-professorship in political economy; Miss Jessie Gertrude Wright, M.A., Ph.D., from a lectureship to an assistant-professorship in botany; George Parkin de T. Glazebrook, B.A. (Tor. Ox.), from a lectureship to an assistant-professorship in history; Miss Gladys I. Wookey, M.A., from a lectureship to an assistant-professorship in English; Mrs. Mossie May Kirkwood, M.A., Ph.D., from a lectureship to an assistant-professorship in English.

In the Faculty of Medicine—Appointments:—William Edward Gallie, M.D., F.R.C.S. (Eng.), professor of surgery and clinical surgery; Herbert Davenport Kay, Ph.D. (Camb.), D.Sc. (Manc.), associate professor of biochemistry; Arthur M. Wynne, M.A. (Qu.), Ph.D., assistant professor of biochemistry; Paul Michael O'Sullivan, M.A., M.B., Ph.D., assistant professor of physiology; William Fletcher McPhedran, B.A., M.B., associate in medicine; Denis R. A. Wharton, B.S.A., Ph.D. (Chic.), lecturer in pathology and bacteriology; Thomas Frederick Nicholson, M.B., B.Sc., lecturer in pathological chemistry; Albert Edward Berry, M.Sc., C.E., Ph.D., lecturer in public health engineering; Earle Willard McHenry, M.A., Ph.D., lecturer in physiological hygiene.

Promotions:—William Herbert Lowry, M.D., C.M., from an assistant-professorship to a professorship in ophthalmology, with headship of the department; Henry Seaton Hutchison, M.B., from an associateship to an assistant-professorship in medicine; Norman Strachan Shenstone, B.A., M.D. (Col.), from an associateship to an assistant-professorship in surgery; Neil E. McKinnon, M.B., from a lectureship to an assistant-professorship in epidemiology and biometrics.

In the Faculty of Applied Science—Appointments:—Cecil G. Heard, B.A., Sc., lecturer in mechanical engineering.

Promotions:—Edward Gowan Russell Ardagh, B.A.Sc., from an associate-professorship to a professorship in applied chemistry; Ross Taylor, B.A.Sc., from an assistant-professorship to an associate-professorship in mechanical engineering; William Gourlay McIntosh, B.A.Sc., from a lectureship to an assistant-professorship in mechanical engineering; Ernest Albert Smith, M.A. (McM.), from a lectureship to an assistant-professorship in chemical engineering; George Hammond Harlow, B.A.Sc., from an instructorship to a lectureship in thermodynamics; Kenneth H. Braithwaite, B.A. (West.), B.A.Sc., from an instructorship to a lectureship in chemical engineering.

In the Faculty of Household Science—Appointments:— Miss Kathleen Emma Bennett, B.A., M.A. (Col.), lecturer.

In the Ontario College of Education—Appointments:—William Gordon Bennett, B.A., B.Comm. (Qu.), B.Paed. (Tor.), A.M. (Chic.), associate professor, commercial subjects; Miss Winifred Glen Barnstead, B.A. (Dal.), director, library school.

Promotions:—George Mallory Jones, B.A., from an associate-professorship to a professorship of methods in English and history; Frederick Ethbert Coombs, M.A., from an associate-professorship to a professorship of methods in elementary education.

In the Faculty of Dentistry—Appointments:—Frank Melville Lott, D.D.S., associate in dentistry; William Magner, M.D., D.P.H. (Ireland), lecturer in pathology.

Promotions—William George Switzer, D.D.S., from an associateship to an associate-professorship in dentistry. Hugh Alexander Hoskin, D.D.S., from an associateship to an assistant-professorship in dentistry.

The academic year which closed on June 30, 1930, presented the Governors, Senate and faculty councils of the university with even more difficult problems than usual, a number of which were satisfactory dealt with, and others only partially solved. It is an old story, repeated almost every year since the war, that the steady increase of numbers has been bringing urgent demands for more accommodation. Also the gradual and often almost imperceptible changes in educational outlook compel us to review frequently both the arrangement and content of our curricula and to consider their modification or enlargement. Last year the number of students enrolled in colleges and faculties largely exceeded that in the preceding year, being 6,759 instead of 6,051, and the increase, spread over most of the faculties, heightened the pressure on teaching staff and accommodation which has been felt, in many departments seriously felt, for several years. There is no such ample equipment in the university as to allow us to meet with freedom the emerging problems even of undergraduate, far less of post-graduate instruction. The questions: Where is class-room space to be secured? Where can a new department if created be housed? How can the use of books be dealt with in the present library? How can we meet the needs of women students for physical training and social life? are depressingly familiar.

Cognate questions will be asked of those who come after us. It would be ominous indeed should the day ever dawn when the Governors and Senate and councils would be undisturbed by similar demands. But each generation, while thinking of the future, works for its own good, and is to be judged by its ability to secure that those under its care shall not miss the really important preparation and privileges which they should enjoy. Our successors will have no right to complain unless we handicap them by the way we build or by not building when we should.

During the past academic year notable progress has been made in providing for better accommodation, the government having generously met the requests of the Governors in respect of a building for the department of botany to be erected on Queen's Park, and an enlargement of the building for the department of mining engineering. Also the intimation of the Government to the Trustees of the Royal Ontario Museum that a commodious and beautiful extension toward Queen's Park crescent had been authorized, has been received by the Governors of the University with great satisfaction, inasmuch as the interests of the University and the museums are so intimately related to one another.

From the legacy of the late Mr. E. C. Whitney, money has been appropriated to erect on St. George Street three out of the four projected units of women's residences for University College. This will meet a long felt need, will contribute to the welfare of University College and will beautify the grounds of the University. Owing to the removal of houses for this purpose, the headquarters of the department of health for women and rooms for post-graduate activities have been temporarily transferred to the building on the corner of Hoskin Avenue and Devonshire Place, formerly occupied by the Kappa Alpha fraternity. But the long outstanding need of quarters for the physical and social well-being of the women of the University is hardly relieved by these changes.

The enlargement of the kitchen and serving quarters of Hart House initiated at the end of the academic year will make it possible for those in charge of the great hall to cope, as never before, with the increasing demand for meals on the part of its membership.

The formal opening of the Banting Institute, which took place after the close of the academic year, marked an epoch in the life of the faculty of medicine. Though large it has been at once fully occupied, and in its departments of pathology, clinical medicine, surgery, and medical research some of the most important research work of the University is being conducted.

By the purchase of four new houses on St. George Street further space has been found for psychology, for history and economics, and for a temporary residence for graduate women.

But notwithstanding all this building activity and expansion, the pressure for room is in some respects greater than ever. A reference to the Librarian's report will at once indicate the condition of acute congestion which exists in the library and which must somehow be relieved as quickly as possible. This is so vital a part of the life of the University that if the constriction continues long undergraduate study will suffer seriously, and post-graduate growth in some departments will almost come to a standstill.

Chemistry in arts has had slight temporary relief by the removal of some classes to the laboratories of the former McMaster building. But this does not solve their greatest difficulties. Chemical engineering is also warning us that the increase of numbers has made it extraordinarily hard for them to give the students what they have a right to expect.

Political science, including commerce, with its rapid growth, cannot find sufficient class-room accommodation even by the inconvenient utilizing of the large rooms in various buildings placed as they are at some distance from one another.

Astronomy also, geology and mineralogy and physics constantly report that they need more space. And one of the most urgent calls comes from the Ontario College of Education.

To have these demands reiterated at short intervals without my being able to assure those interested that the Governors are in a position to meet them at once is an unpleasant duty, though I must also say that I find the heads of the departments willing to do their utmost to make the situation tolerable. Behind this pressure with its inconvenience is the great and exhilarating fact that it is the genuine development of the University in its highest aspects, not merely in numbers, which gives rise to most of our problems of this nature.

The most important event in the faculty of arts during the year, and indeed for a good many years, was the decision of the faculty, confirmed by Senate and Governors, to discontinue instruction in the pass subjects of the first year, beginning with the Session 1931-32. This decision was arrived at after long and thorough discussion. As far back as 1912 the principle was approved by our faculty of arts, but chiefly because of the unwillingness of the other universities of the Province to accept the proposal it was not put into effect. Since those days the conditions of higher education have been changing. High schools and collegiate institutes have been equipped more completely in the rapidly growing towns and cities, and their numbers have caused a rising attendance at this

University. The repeated demands for more buildings and staff heightened the argument in favour of the policy, as little was to be said for devoting space and the time of teachers to students who can easily secure education of a similar standard in all the leading cities and towns of the Province. The work of the first year pass course in arts is distinctly of school grade. A great University with its urgent needs should not at this time in the cultural development of this Province devote any of its energy to reduplicating that quality of work. The other reasons for reinforcing the proposal have often been given, but I shall enlarge chiefly upon attendance. The arguments which were used against the change need not be set forth. Suffice it to say that they were carefully and long considered in committees and in full meetings of the faculty council.

The figures of attendance in the first year in the past few years were as follows:

	1923-24	1924-25	1925-26	1926-27	1927-28
Pass	222	384	342	365	414
Honour	341	330	391	445	416
	563	714	733	810	830

For the past two years the figures of those in the colleges from Toronto and from outside Toronto were as follows:

1928-1929

College	Pass		Honour		Totals				
	Toronto	Outside Toronto	Toronto	Outside Toronto	Pass	Honour	Toronto	Outside Toronto	Grand Total
University	141	77	137	103	218	240	278	180	458
Victoria	27	28	52	85	55	137	79	113	192
Trinity	32	21	21	20	53	41	53	41	94
St. Michael's	38	42	13	14	80	27	51	56	107
Totals	238	168	223	222	406	445	461	390	851

1929-1930

College	Pass		Honour		Totals				
	Toronto	Outside Toronto	Toronto	Outside Toronto	Pass	Honour	Toronto	Outside Toronto	Grand Total
University	174	84	156	130	258	286	330	214	544
Victoria	41	42	72	144	83	216	113	186	299
Trinity	28	36	16	28	63	44	44	64	108
St. Michael's	45	41	13	17	86	30	58	58	116
Totals	288	203	257	319	491	576	545	522	1,067

It is to be observed that during the past seven years the number of students in the pass course of the first year in arts has increased from 222 to 491, and the number in the honour courses from 341 to 576. If this were to continue the number of pass students would soon offer a very serious problem. Further, during the past two years the pass students who came from Toronto have increased by fifty, and they greatly outnumber those of the same grade who come from without the city. Also, the number of honour students from outside Toronto last year surpassed those from the city and outnumbered the pass students from outside the city by 116. All this shows that the schools outside

Toronto send relatively more students of higher standard than those of the city, and that they can easily rise to the new requirement. Indeed the University in its pass course has been doing more work for the city, which it could very well do for itself, than it has been doing for the Province at large.

Already every year larger numbers of students have been entering with honour matriculation at the second year. In the last session 491 entered the first year of the pass course, and 120 entered direct from school the second year of the pass course. Of those entering the first year, forty-four had credits in four honour matriculation subjects, sixty-five in three, and forty-six in two, so that quite an appreciable number of them would find the work of the first year rather easier than was wholesome for their intellectual health.

Of the 203 from outside Toronto who entered the pass course last year, 117 came from schools in which they could prepare for the higher standard, many of them with records quite as good as those in Toronto, and only twelve came from continuation schools, and seventeen from private schools. The rest were drawn from outside the Province. These numbers proved that if the proposed policy was educationally right no real hardship would be done by carrying it into effect.

To abolish the lower standard of entrance to arts will be an advantage to the discipline and quality of the schools of the Province. It will also prevent many students from coming to the University on a meagre equipment by reason of which hitherto at the end of the year many have faced failure, and others whose chief object in coming would be the enjoyment of the social or athletic life of the University. The pass degree will after next year be obtainable in three years, but it will be of the same standard as before, probably indeed it may be improved

The gap in the quality between the pass and the honour degrees has been widening greatly in recent years. More well prepared scholars have been coming from the schools. These well prepared scholars also when they graduate find new openings. The growth of the sciences and commerce has demanded a more highly specialized type of graduate for the conduct of research in laboratories, and for high positions in commercial or insurance offices. As a result fewer relatively than formerly of our honour graduates have of late gone into the profession of teaching in the schools. Perhaps our honour courses had become too specialized for the average teacher even in the higher ranks. It has therefore been decided to introduce a new course between the honour and the pass, to be called "the general course," a term also historically agreeable to at least one of the federated universities. This course will be based upon the pass work of the first two years. Such students as reach a good standard—say sixty per cent.—at the end of the second year will be allowed to enter the general course in the third year, and to take a fourth year before graduation. In the last two years the student, instead of being bound to present five subjects of the pass course, will be allowed to choose fewer but cognate subjects, and thus, while getting an excellent general education, will be able by a measure of specialization to become versed in some one or more departments of study. It is hoped that if a student graduates in this course with distinction the Provincial Department of Education will recognize such grade of attainment as qualifying for "specialist standing," and the M.A. degree might be attainable after one more year's study.

The other universities of the Province were consulted with regard to their attitude towards this great change before it was announced. While they recognize that the University of Toronto may be perfectly justified in carrying it into effect, they believe that their local conditions prevent them from adopting the proposal at present.

These changes involve certain modifications in existing honour courses which will be considered by the council during the forthcoming session.

None of the modifications in the curricula of the other faculties call for report. It is obvious once more, as our previous experience has shown, that when standards of entrance to any faculty are raised the schools and pupils respond, and soon the number of those seeking admission is greater than ever. This we see to-day in the faculties of medicine and applied science.

A good many years ago university education the world over entered into a new age. For several centuries it was static; now change is manifold and rapid. This, of course, means that the university as one of the greatest organs of civilization is adapting itself to the social conditions of the modern world. If the institution often seems to some too slow in its movement, it is only necessary to compare its present character with what it was a century ago; and at the same time to remind ourselves that the university will overload itself if it at once on demand makes itself the medium for providing for every semi-professional calling which is not based upon such a measure of scientific or humanistic equipment as differentiates university education from what, from want of a better word, may be called the technical. There is an important place for extension work (last year our enrolment was 419 in courses and 3,426 at provincial centres), but that, too, we seek to confine to instruction which is not likely to be done in technical schools. There are certain subjects in history, political science, higher mathematics, the pure and applied sciences, ancillary to or central in the training for some vocations which can best be given by teachers in the university. In so far as this instruction does not divert teachers from their main functions in the departments to which they have devoted themselves, the university endeavours to make provision for it.

It can hardly be repeated too often that one of the two purposes of a university is to train a student, usually by a long process, to understand the principles of the mental social and natural sciences or of history and literature, on the application of which the callings of life respectively depend. The practical application of these principles has to be learned for the most part in hospitals, engineering undertakings, lawyers' offices, commercial and manufacturing houses. Consequently the needs arising out of the social development of the country in which the University is situated are kept in view in making modifications of established courses. The tradition of higher education in this University is mainly English, Scottish and Irish, a tradition that is being maintained by constant additions to the staff; but a good deal of influence has come from the United States, and continental Europe also has made a contribution. As we look to the future the function of this and other Canadian universities will be to assimilate these traditions and influences, and, by making so much of them as we need our own, to create institutions of higher education which will best serve the peculiar and unique life which we are working out for ourselves in our homeland.

During the session the following special lectures were delivered:

The Alexander lectures by Professor H. W. Garrod, emeritus professor of poetry, University of Oxford, on "Education in Poetry," "Poetry as Truth," "Poetry as Delight," and "Poetry and Criticism"; three lectures by Dr. A. Bethe, professor of physiology, University of Frankfurt, on "The Permeability of the Surfaces of Marine Animals," "Differences in the Physiological Antagonisms of Ions," and "The Analysis of a Muscle Contraction into its Constituent Parts"; two lectures by Professor J. Stanley Gardiner, F.R.S., department of zoology and comparative anatomy, University of Cambridge, on "The Formation of Coral Reefs"; three lectures by Professor Corrado Gini, director-general of statistics in Italy, professor of political economy and statistics, University of Rome, director of statistics, University of Padua, on "Present and Future Progress of Statistics," "On the Future of Populations," and "The Policy of the Italian Government in Matters relating to Population"; a lecture by Professor F. Schoenemann, University of Berlin, on "The Americanization of Europe"; two lectures by Professor Vittoria D. Macchioro, professor of archaeology, University of Naples, and a curator of the Museum of Naples, on "Orphism," and "The Orphic Villa of the Mysteries"; two lectures to the students in law by Professor Ernest Mahaim, University of Liége; two lectures by Professor Charles J. Chamberlain, University of Chicago, on "Alternation of Generations," and "Determination of Sex"; two lectures by Professor E. Allison Peers, Gilmour professor of Spanish, University of Liverpool, on "The Nature of Christian Mysticism," and "The Mystics of Spain"; a lecture by Dr. J. Arthur Thomson, regius professor of natural history, University of Aberdeen, on "The Wonder of the World"; three lectures by Professor Jean Cabannes, University of Montpellier, on "Molecular Scattering of Light by Gases," "Experimental Laws of Raman Effect," and "Degradation of Light Frequency by Molecular Scattering"; two lectures by Professor S. Goudsmit, University of Michigan, on "Spectroscopy," and one on "Atoms and Atomic Models"; the Balfour lecture in medicine by Dr. John M. C. Finney, professor of clinical surgery, Johns Hopkins University, on "The Making of a Surgeon."

The department of physics arranged a symposium on "Theoretical Physics," and a series of lectures was given by the following physicists: Professor W. F. G. Swann, director, the Bartol Research Foundation, Franklin Institute; Professor J. H. Van Vleck, University of Wisconsin; Professor Otto Oldenburg, University of Göttingen; Professor Svein Rosseland, University of Oslo; Dr. E. S. Akeley, recent student of Professor Einstein; and Dr. A. E. Ruark, the Mellon Institute, Pittsburg.

The university organist, Dr. F. A. Mouré, gave ten fortnightly recitals on the organ in Convocation Hall to large audiences.

Three special convocations were held for the pupose of conferring the honorary degree of doctor of laws upon Principal W. L. Grant, on the occasion of the celebration of the centenary of Upper Canada College, upon the Right Honourable J. Ramsay MacDonald, Prime Minister of Great Britain and Northern Ireland, and upon General the Right Honourable Jan Christian Smuts.

Every year recognition is made in one way or another of members of the staff of the University. On this occasion I mention the high honour done to Professor E. J. Urwick, who was invited by the London Charity Organisation Society to deliver the Sir Charles Loch memorial lecture in Old Hall, Lincoln's Inn, London, on January 9th; also to Professor J. G. FitzGerald who was appointed on the health committee of the Leagues of Nations as public health expert assessor and is chairman of the committee on education in hygiene and preventive medicine. This will involve a conference with the directors of schools of hygiene of the world.

A noteworthy event in the year was the visit in the month of April of sixteen headmasters of British public schools to the leading universities of the Dominion, with the object of enabling them by personal observation to give more definite advice to the boys of their schools who may wish to enter upon professional or business life in this Dominion.

During the past year the University has received the following benefactions, totalling, $193,368.49:

From the E. C. Whitney Bequest, $62,896.64; D. A. Dunlap Bequest, $50,000; D. A. Dunlap Memorial Scholarship, $1,000; Eaton Endowment, $25,000; Laura Spelman Rockefeller Memorial for Child Welfare, and premium, $19,000 and $103.92; Rockefeller Foundation, for Paediatrics, $8,000, and premium, $30; donations for the Faculty of Dentistry: J. P. Bickell, Esq., $3,000; Carnegie Corporation, for Dental Library, $2,000, and premium, $7.50; Canadian Dental Research Foundation Fund, $1,000; Ash-Temple Fellowship, $250; J. B. Willmott Scholarship, $250; Ontario Dental Association Fellowship, $250; Graduate Fellowships: Imperial Oil Company, $500; Estate of the late Sir Edward Kemp, $500; Colonel R. W. Leonard, $500; Colonel H. Cookshutt, $500; the Robert Simpson Company, $500; Canadian Pacific Railway, $1,500; George M. Wrong Scholarship, $3,138.58; Flavelle-Peacock Lectureship: Sir Joseph Flavelle, $1,250; E. R. Peacock, Esq., $1,250; Glen Mawr Old Girls' Association Scholarship, $2,300; Maritime Provinces Association Scholarship, $1,300; Political Science Fellowship, $1,000; Library Psychology Fund, $914.68; Rabbi Isserman Prize, $703.87; St. Margaret's College, Alumnae Scholarship, $650; Social Service Council of Ontario Scholarship, $500; Robert Bruce Scholarship, $463.91; Sir Edmund Walker Scholarship, $450; University College Alumnae Matriculation Scholarship, $400; Robert Simpson Company Scholarship, $300; John McCrae Scholarship, $275; Maurice Cody Scholarship: for University College, $125; Modern History, $100; Memorial Prize, University of Toronto Schools, $25; University Schools Scholarships: Sir John Eaton Memorial, $120; Hon. Newton Rowell, K.C., for Langford Rowell Scholarship, $100; Boiler Inspection and Insurance Company Scholarship, in Mechanical Engineering, $150; Rev. Dr. H. J. Cody Scholarship, $125; Toronto Brick Company Prizes, in Architecture, $125; Ontario Association of Architects Scholarship, $100; Delta Phi Epsilon Scholarship, $100; Darling and Pearson Prize, in Architecture, $100; J. J. Gibson Scholarship, $100; A. H. Jarvis Bursaries, $100; McCaul Scholarship in Classics: Principal M. Hutton, $25; G. H. Fraser, Esq., $25; A. M. Stewart, Esq., $25; Mathematics Scholarship, Professors Beatty and Pounder, $50.00; Hon. Charles McCrea for Dent McCrea Scholarship, $50; Dr. R. A. Reeve Prize, $50; British Association Advancement Science Fund, for Prize Books, $33.94; Professor F. Tracy Prize, in Ethics, $30; Squair French Library Fund, $15.45; University College Alumnae Prize, in English, $10.

I have much pleasure in reporting that Lady Kemp has undertaken to continue a post-graduate fellowship of $500 in memory of the late Sir Edward Kemp, whose death is deeply regretted by his fellow members of the Board; also that Sir Joseph Flavelle has arranged for a post-graduate fellowship of the same amount for the following five years. Through the Honourable Vincent Massey, a benefactor whom this University always holds in warm remembrance, the Massey Foundation has offered a post-graduate scholarship to be held at the University of Toronto by a student from India, to be selected by a committee in India, of which the Viceroy has consented to act as chairman. This scholarship will be of great significance. Professor H. J. Davis has presented to the Governors a sum of $10,000 to establish the Gertrud Davis Exchange Fellowship. The income from the sum will be available annually to enable a graduate of University College to pursue studies in a German university. By reciprocal arrangement, the International Institute of Education in Berlin has provided a similar scholarship to enable a German student to pursue studies in this University. A gift of colorprints was received from the Metropolitan Museum of New York through the Carnegie Corporation.

All of which is respectfully submitted,

R. A. Falconer,
President.

November 13th, 1930.

REPORT OF THE PRINCIPAL OF UNIVERSITY COLLEGE

Professor M. W. Wallace, M.A., Ph.D.

I have the honour to submit to you the following report on the activities of University College during the session 1929-1930:

During the past year the following gifts have been made to the College:

Professor H. J. Davis has presented to the Governors the sum of $10,000 to establish the Gertrud Davis Exchange Fellowship, in memory of his wife. The income from this sum will be available annually to enable a graduate of University College to pursue his studies for one year or more in a German university. By arrangement with the International Institute of Education in Berlin, a German student will spend a like period in the University of Toronto. Similar exchange fellowships have been established during recent years by the Royal Institute of International Affairs in London and similar bodies elsewhere. They have been open to graduates of English, French, German and American universities, and the experiment has been regarded by many university authorities as highly successful. It is a matter for congratulation that our own College is now to share in the benefits that result from an international exchange of students. Mr. W. P. Apps of the graduating class has been appointed the first exchange fellow.

The Alumnae Association have established an annual scholarship of the value of $100. This scholarship will be awarded during the present year to a student who has completed the first year of the pass course, and who proposes next year to enter an honours course.

Two prizes have been established in the College by the Alumnae of St. Margaret's College. The first (the income from a capital sum of $600) is for excellence in public speaking. The second prize of $15 is in memory of Florence M. Neelands, a graduate of University College in 1896, and is to bear her name. It will be awarded for excellence in a French essay, and will be open for competition by students of the third year.

Messrs. Mathers and Haldenby have completed plans for three women's residences to furnish accommodation for about 160 students. Contracts for the erection of these buildings have been let, and the houses which occupied the ground between the Women's Union and Hoskin Avenue have already been demolished. The new residences will be built of red brick in the Georgian style, and their completion will mark an epoch in the history of women students in the College. A magnificent gift of $25,000, a contribution toward the furnishing of the residences, has been made by the Alumnae Association. No statement could be more eloquent than this both with regard to the supreme need of the new buildings and as a testimony to the devotion of our women graduates.

The need of residential accommodation for our men students is very pressing, and the success of the one residence which we now possess only emphasizes the desirability of grappling with the problem in a larger way.

Since my last report several members of the College staff have resigned their posts. Mrs. Kirkwood, who had done most efficient service as dean of women for a numer of years, resigned in October last in order to give her time exclusively to her work in the department of English. Mrs. Kirkwood had devoted herself unsparingly and with high success to the difficult duties of her position, and it has been a difficult matter to find a worthy successor. We have been fortunate, however, in securing the temporary services of Miss Dorothy Kilpatrick who will also remain with us during the coming session. Dr. Gertrude Wright, who has for several years carried the heavy burden of her work as head of Queen's Hall and assistant professor of botany, has also felt that she must give the whole of her time to her work of teaching and research. Professor W. A. Irwin, of the department of oriental languages, has resigned to accept a professorship in the University of Chicago. Professor Irwin is a distinguished scholar, and his resignation leaves the College poorer in scholarship and teaching power. No vacancy is harder to fill to-day than that caused by the resignation of a great scholar in orientals, and it is with the deepest regret that Professor Irwin's colleagues have learned of his decision to leave Toronto. Miss Gladys Wookey has resigned her position as assistant professor of English literature, and Mrs. M. S. Hunter as lecturer in French.

The Alexander lectures were delivered in March by Professor H. W. Garrod, formerly professor of poetry in the University of Oxford. Professor Garrod gave four lectures on the subject, *The Study of Poetry*, and on each occasion Hart House Theatre was filled almost to its capacity. Professor Irving Babbit of Harvard University has accepted the appointment as lecturer on the same foundation for next year.

A course of ten public lectures by members of the College staff was given during the course of the session in the west hall.

GEOGRAPHICAL DISTRIBUTION OF STUDENTS

The geographical distribution of students is as follows:

FACULTY OF ARTS

AUDITOR'S REPORT

Toronto, 13th November, 1930.

To the Governors of the University of Toronto:

GENTLEMEN:

I have verified the attached Balance Sheet of the University, dated 30th June, 1930, and Schedules 1 to 10, and report that all the transactions of the year upon Revenue and Capital Accounts have been duly audited and found correct.

Yours faithfully,

E. C. CLARKSON,
Auditor.

(Queen's Hall group, $31,138.05; St. George Street, $8,820.35; Argyll House, $4,582.00)		44,000 00	44,540 40
University College Women's Union:			
Membership fees		2,450 00	3,026 00
Receipts from rooms and meals		26,550 00	24,805 78
Central Power Plant:			
Wycliffe, Victoria and Knox Colleges	$29,674 90		
Royal Ontario Museum	4,752 65		
Sundry accounts	6,116 81		
		38,000 00	40,544 36
Casual Revenue		5,000 00	10,532 70
		$1,363,000 00	$1,448,363 24

Expenditures

	Estimate	Actual
Under appropriations as per Appendix II	$2,739,660 00	$2,632,834 75
Interest written to Scholarship and other funds	32,000 00	38,727 76
	$2,771,660 00	$2,671,562 51
Receipts as above	1,363,000 00	1,448,363 24
Expenditures in excess of receipts carried to Schedule 6	$1,408,660 00	$1,223,199 27

SCHEDULE 7

SITE LANDS, BUILDINGS AND CONTENTS

Site Lands:		
2,777,558 sq. feet at forty cents per foot	$1,111,023 20	
298,408 sq. feet at cost price	406,435 53	
18,000 sq. feet at estimate	40,000 00	
3,093,966 sq. feet		$1,557,458 73
Buildings:		
Anatomical building	$482,388 37	
Baldwin House	12,000 00	
Biological building	129,745 30	
Botanical building	1 00	
Chemical building	77,469 88	
Convocation Hall	214,866 22	

Buildings—*Continued*		
Dental building	$350,000 00	
Electrical building	346,699 89	
Engineering building	50,000 00	
Forestry building	122,359 86	
Geodetic Observatory building	12,000 27	
Hart House (not appraised)	....	
Household Science building	455,000 00	
Hygiene and Public Health building	417,642 61	
Library building	327,425 50	
Mechanical building	119,017 21	
Medical building	165,000 00	
Men's Residences	217,670 04	
Military Studies building	8,239 47	
Mining building	384,736 89	
Ontario College of Education	554,324 09	
Physics building	363,945 85	
President's House	38,767 62	
Press building	1 00	
Psychology building No. 1	13,433 26	
Psychology building No. 2	8,900 00	
Simcoe Hall	399,055 10	
University College building	450,000 00	
University College Women's Union	70,059 19	
Women's Residences	35,176 77	
6 Queen's Park	7,228 28	
43 St. George Street, house and land	30,054 25	
45 St. George Street, house and land	39,079 67	
49 St. George Street, house and land	25,007 51	
		$5,927,295 10
Library	$430,679 65	
General Museum Specimens	1 00	
Convocation Hall Organ	24,000 00	
		454,680 65
Departmental Equipment:		
Anatomy	$1,340 00	
Architecture and Drawing	10,830 00	
Astronomy	1,635 00	
Biology	6,131 25	
Botany	5,500 00	
Chemical Engineering and Applied Chemistry	10,114 00	
Chemistry	14,040 00	
Civil Engineering: Municipal and Structural	10,075 00	
Civil Engineering: Surveying and Geodesy	12,980 00	
Dentistry	85,000 00	
Electrical Engineering	30,923 00	
Engineering Physics and Photography	4,127 00	
Geology	7,505 00	
Household Science	19,000 00	
Mathematics	500 00	
Mechanical Engineering	10,000 00	
Mechanics	750 00	
Mineralogy	10,145 00	
Mining	16,270 00	
Ontario College of Education	45,042 44	
Pathology	18,440 56	
Pathological Chemistry	7,925 74	
Pharmacology	2,430 00	
Physics	29,250 00	
Physiology	12,500 00	
Psychology	2,700 00	
		375,153 99
Furniture and Furnishings:		
Men's Residences	$18,715 89	
Women's Residences	3,960 55	
University College Women's Union	10,950 00	
University College and other buildings—general furniture	11,938 00	
		45,564 44
Arena		223,070 40
Athletic Field Stadium and equipment		11,817 88
Gymnasium equipment		7,620 19

Dining Hall equipment	$1 00
Printing Plant	1 00
Connaught Laboratories (Farm, buildings and equipment)	80,000 00
Connaught Laboratories (Medical building plant)	1 00
Central Power Plant	32,058 93
Surveying Practice Camp, Lutterworth Township (land, $1,250, buildings, etc., $10,000)	11,250 00
Aura Lee Grounds and equipment (Ontario College of Education)	17,276 27
Total valuation	$8,743,249 58

Return of 30th June, 1929		$8,860,053 13	
Additions thereto:			
Lot 15, University Park, restored to Site Lands		4,878 40	
Library proper:			
Value of additions for 1929-30 as reported by the Librarian	$43,700 46		
Less depreciation at 3 per cent. on $443,999.64	13,319 99		
		30,380 47	
Convocation Hall Organ:			
Additions and improvements, 1929-30	$8,174 50		
Less allowance for depreciation on former figure of $19,603.11	3,777 61		
		4,396 89	
			$8,899,708 89

Contra

Central Power Plant:			
Repayment from Revenue for 1929-30		$20,208 00	
Buildings written off General Endowments Fund as per Schedule I	$145,728 76		
Less transferred to land valuation	9,500 00		
		136,228 76	
Women's Residences Furniture written off by application of credit from Sale of Wild Lands set apart for Women's Residences		22 55	
			156,459 31
Return of 30th June, 1930			$8,743,249 58

SCHEDULE 8

UNPRODUCTIVE LANDS

Vacant land in Port Hope	$8,045 00	
Endowment lands unsold in various townships	152 00	
U. C. C. block on King Street	50,402 77	
		$58,599 77

TRANSACTIONS, 1929-30

Local Improvement taxes, U. C. C. block	$24 90	
Return of 30th June, 1929	58,574 87	
Return of 30th June, 1930		58,589 77

SCHEDULE 9

LEASED PROPERTIES

Land leased to City of Toronto	$120,000 00	
Park lots leased	260,595 40	
Toronto business properties	283,000 00	
House and land, 47 St. George Street	10,172 95	
Building, No. 719 Spadina Avenue	4,000 00	
Building, No. 721 Spadina Avenue	4,023 51	
Caradoc Farm	3,000 00	
		$684,791 86

Rentals and City of Toronto payment accrued		$8,551 79
Rentals past due		150 00
Sundry Land Earnings due		40 00
		$693,533 65
Return of 30th June, 1929		$717,519 15
Deductions:		
Valuations of leased lots written off upon transfer to Provincial Government (Schedule 1)	$20,860 00	
Valuation hitherto carried in this Schedule for Lot 15, University Park, formerly leased, now restored to Site Lands	2,000 00	
Decrease in rentals, etc., outstanding	1,125 50	
		23,985 50
Return of 30th June, 1930		$693,533 65

SCHEDULE 10

Investments, Cash and Accounts Receivable

Dominion and Province of Ontario Bonds	$1,933,362 54	
Interest accrued	8,236 44	
		$1,941,598 98
Dominion and Provincial Railway Bonds (guaranteed)	$313,407 49	
Interest accrued	2,904 84	
		316,312 33
Municipal and other debentures	$321,224 27	
Interest accrued	551 82	
Interest outstanding on purchases	1,301 36	
		323,077 45
University of Toronto debentures (guaranteed)		775,807 00
Dominion Power and Transmission Company stock		2,000 00
Consumers' Gas Company stock		1,000 00
Mississippi Land Company's stock		1 00
Investments in trust for Banting Research Foundation		642,448 57
Loan to Athletic Association		100,000 00
Accounts Receivable:		
Ontario Government (20 George V, Cap. 65)	$75,000 00	
University Press	9,277 05	
University Studies	29 12	
Department of Photography	275 79	
Miscellaneous labour and material	8,302 66	
Central Power Plant	29,674 90	
	$122,559 52	
Less Royal Ontario Museum accounts at credit	5,859 95	
		116,699 57
Canadian Bank of Commerce, on deposit		1,033,701 01
		$5,252,645 91

Transactions, 1929-30

Inwards

	$743,037 79	$4,764 50	$124,695 34	$613,577 95
Less paid in advance for 1930-31				350 00
				$613,227 95

APPENDIX II

REVENUE EXPENDITURES, 1929-30

	Appropriation	Supplementary	Unused	Total
I. Administration:				
1. Salaries	$106,775 00	....	$1,438 37	$105,336 63
2. Pensions and Retiring Allowances	77,000 00	$985 67	....	77,985 67
3. President's Office	750 00	....	29 78	720 22
4. Bursar's Office	3,650 00	....	108 94	3,541 06
5. Registrar's Office	8,050 00	....	1,881 74	6,168 26
6. Superintendent's Office	3,450 00	804 98	....	4,254 98
7. Convocation Hall and Simcoe Hall	14,225 00	....	711 92	13,513 08
8. President's House	950 00	....	123 39	826 61
	$214,850 00	$1,790 65	$4,294 14	$212,346 51
II. Library and University Studies:				
9. Salaries	$49,000 00	$254 18	....	$49,254 18
10. Library Building and Department	56,725 00	....	$517 98	56,207 02
11. University Studies	3,000 00	....	1,567 21	1,432 79
	$108,725 00	$254 18	$2,085 19	$106,893 99
III. 12. Royal Ontario Museum	$42,250 00	....	$3 85	$42,246 15
IV. Athletics, Physical Training, Military Studies, etc.:				
13. Athletics and Physical Training—Men	$28,500 00	....	$883 42	$27,616 58
14. Athletics and Physical Training—Women	5,950 00	....	340 18	5,609 82
15. Health Service—Men	7,550 00	....	347 11	7,202 89
16. Health Service—Women	5,600 00	....	328 48	5,271 52
17. Military Studies	5,240 00	....	354 59	4,885 41
	$52,840 00	....	$2,253 78	$50,586 22
V. Faculty of Arts:				
18. Salaries	$653,810 00	....	$13,247 35	$640,562 65
19. Biological Building and Department	11,700 00	....	623 02	11,076 98
20. Botanical Building and Department	19,625 00	....	1,659 38	17,965 62
21. Chemical Building and Department	13,750 00	319 70	....	14,069 70
22. Physics Building and Department	17,950 00	....	734 64	17,215 36
23. Astronomy	650 00	....	111 36	538 64
24. Geological Department	1,350 00	....	273 77	1,076 23
25. Mineralogical Department	2,000 00	43 66	....	2,043 66
26. Philosophy and Psychology	7,525 00	....	836 02	6,688 98
27. Mathematical Department	650 00	....	575 84	74 16
28. Mechanics	400 00	....	164 72	235 28
29. Political Economy and History	8,115 00	....	1,186 39	6,928 61
30. Ethnology and Anthropology	200 00	....	70 94	129 06
31. Italian and Spanish	75 00	....	53 04	21 96
32. History of Industrial Art	250 00	....	43 43	206 57
33. University College Building	13,500 00	....	1,449 77	12,050 23
34. University College Departments	775 00	....	303 44	471 56
35. University College General Expenses	2,250 00	....	394 56	1,855 44
	$754,575 00	$363 36	$21,727 67	$733,210 69
